Major

increases

pressure

over treaty

MR JOHN MAJOR, the UK prime

minister, yesterday refused to countenance defeat in this week's crucial parliamentary vote on the

Maastricht treaty's social chapter

as he stepped up pressure on opponents within his own Con-

servative party to fall into line. Entering the most difficult

week of his premiership. Mr Major repeatedly expressed incre-dulity that any Conservative MP

would vote for proposals that he said would raise unemployment

and transfer "massive" powers from the UK to Brussels. "I don't believe - given the

nature of the social chapter -

that Conservative MPs. when

they consider what it means and

what it can do, are going to do other than support the govern-

ment," Mr Major said.

THE RESERVE OF THE PARTY OF THE

The Maslenica bridge linking northern and southern Croatia was opened by Croatian president Franjo Tudiman yesterday after delays forced by Serb shelling. It replaced a bridge blown up in Croat-Serb fighting in 1991. Although Croatia and Serbia have agreed to demilitarise the bridge and consign it to UN control by the end of the month, the opening could raise tension and spark renewed hostilities between Serbs and Croats. Earlier report, Page 3

Although the LDP emerged from the elections as overwhelmingly the largest party in the 511member lower house of the Diet (parliament), the balance of power will be held by recently formed reformist conservative parties: the Japan New party, launched a year ago, its ally the New Harbinger party, and the Japan Renewal party, formed by a breakaway of 36 lower house LDP members a month ago.

The Japan Renewal party, led by Mr Tsutomu Hata, a former finance minister, did better than expected, winning 55 seats. The Japan New party won 35 seats in its first general election. The

13 seats.

The LDP, in an impressive display of electoral durability based on the strength of its local organisation, won 223 seats, broadly maintaining its strength following last month's split in spite of the prolonged recession and recurring political scandals. When the last parliament was dissolved, the LDP had 227 MPs.

The main losers were the Social Democratic party, the for-mer Socialists - which prompted the election by lodging a no-confidence motion in the government on June 18.

The SDP lost 64 of its 134 seats, mainly in urban areas where independent voters turned to the new parties. Mr Akira Yamagishi, president of Rengo, Japan's largest trade union organisation, confirmed that the SDP's demise may be terminal. He said: "The SDP will have little impact on

Efim liquidation blocked by EC dispute badly handled that it affected maintains it has a legal obliga- Italian officials believe the liq-

By Robert Graham in Rome and Haid Simonian in Milan

A BITTER dispute between Italy and the European Commission over state subsidies is blocking disbursement of L7,000bn (\$4.4bn) earmarked by the Italian government to pay banks and suppliers owed money by Efim, the state industrial holding placed in liquidation last July.

Italian officials maintain that if the matter is not resolved quickly, the liquidation process risks being undermined and the cost of the operation increased. Already the eventual cost of liquidating Efim, with outstanding debts of L18,000bn, is expected to be as much as L17,000bn. Representatives of foreign

THE UNDOING OF EFIM Page 2 economic fault lines ■ Rome piots survival course

banks, seeking to recover principal and interest on L3,500bn. were told bluntly last week at a meeting in Rome with the Treasury: "Don't blame us - blame Brussels." The banks had suspected the Treasury of using the stance taken by Brussels as an excuse not to pay, but they now accept the deadlock is genuine.

The matter is all the more

embarrassing to the Italian government since the original liquidation announcement was so advance and were initially led to expect a two-year moratorium with repayment at below market rates of interest on what amounted to sovereign debt.

The Efim funds have been blocked since April on the grounds that they constitute a form of unfair aid, albeit retrospective, to state-owned compa nies invoking articles 92 and 93 of the Treaty of Rome. EC officials insist it is a question of Italy conforming to the rules. The Italians have countered by saying the liquidation process is precisely to prevent the state from subsidis-ing the Efim group of 120 compa-

Pakistan to appoint interim premier as Sharif steps down

MR MOEEN Qureshi, a former vice-president of the World Bank, was last night expected to be appointed as Pakistan's caretaker premier after the army arranged a deal which brought the resignation as prime minister of Mr

Mr Sharif announced on television last night that he would step down, and President Ghulam Ishaq Khan was expected to follow suit. The two have been engaged in a power struggle for the last six of Mr Sharif's 32 months in office. Elections for

the presidency and a new government are planned by the autumn. In an effort to ensure their impartiality, the new prime min-ister and other ministers in the interim government were almost certain to give commitments not to contest the election, senior government officials said.

Similar caretaker governments are expected to be set up in Pakistan's four provinces, where

Economic indicators

early elections would be held.
As well as his wide international experience, Mr Qureshi, has the advantage of having no affiliation with any political group in Pakistan, the officials added.

Mr Qureshi's World Bank credentials are considered a plus for Pakistan's efforts to seek a \$1bn loan from the international Monetary Fund under the extended structural adjustment facility this year. Islamabad is also due to present its case to an annual aid consortium meeting due to be held in Paris in September.

A meeting scheduled in April had to be cancelled after Mr Sharif was dismissed from office by Mr Khan, whose decision was subsequently overturned by the country's supreme court.

Mr Khan was expected to hand over power to Mr Wasim Sajjad, chairman of the senate. The negotiations between Mr Khan and Mr Sharif were

staff. Ms Benazir Bhutto, the opposition leader, has already agreed to the arrangements, which meet her demand for fresh

Mr Sharif had sought to mend fences with Ms Bhutto but was apparently unwilling to concede ground even on symbolic issues. There was virtually no progress on withdrawing the corruption charges against Ms Bhutto, filed when her government was sacked in August 1990 and which are unlikely ever to be proved in

During a recent meeting with Mr Khan Ms Bhutto asked him to use his constitutional powers to dissolve the elected assemblies, sack Mr Sharif's government and call fresh elections.

The power struggle had created economic uncertainty, with some investment plans put on hold. In his address last night Mr Sharif accused his critics of seeking to stop his efforts aimed at alleviating poverty and promoting eco-

last year, has about 4,000 employees.

The Italian company is the biggest

fortunes for large glassmaker

THE FAULTS and weaknesses of the Italian economic system have been exposed by the liquidation of Efim, the state industrial holding, which will cost taxpayers at least L17,000bn (£7.2bn).

A year after a hurried decision was taken by the then government of Prof Giuliano Amato to place the chronic lossmaker in voluntary liquidation, Efim is still very much alive – rather than half dead as it should be by now.

The first asset disposal of the holding's 120 companies is due to be concluded this week with the L210bn sale of Siv, the glassmaker. But the liquidation process is unlikely to meet the ambitious two-year deadline of July 1994.

This is not surprising since Efim, with L18,000bn in outstanding debt and the livelihood of 37,000 employees at stake, constitutes the biggest voluntary liquidation in postwar Europe. Efim's odd assort-ment of activities range from aluminium smelting, armaments and helicopters to manufacturing mass transit systems, owning health spas and construction.

The sheer size and diversity of the group has complicated the operation. But despite the difficulties, the Italian authorities need to complete the liquidation successfully to offer convincing proof of efficient administration and a genuine desire to curb the dominant role of the state. Failure to do so will reflect on their ability to handle smoothly the ambitious privatisation programme, as many of the problems

factors that have slowed and

 A crowded government agenda: the Amato government and its successor, headed by Mr Carlo Azeglio Ciampi, have had their hands full first with a currency crisis, and then tackling the public sector deficit against a background of collansing traditional parties. Nationwide corruption

scandals: five Efim companies are implicated in kickback investigations, the most serious being Agusta, the lossmaking helicopter group, and Efim's finance subsidiary, Bureaucracy: three ministries have been involved (Trea-

sury, Industry, and State Shareholdings), paperwork has been complex and liquidators have been hampered by the government as shareholder dictating policy via inflexible decrees, only alterable by fresh decrees. There have been four. Recession: the sharp decline in industrial activity, especially in defence, has caused constant adjustments in the liquidation plans, while rising unemployment has increased the social pressure to curb the level of job losses. Up to 40 per

regarded as sumbus. • Inexperience: liquidation has been an infrequent instrument, and Italy lacks both the juridical tools and the technical expertise.

cent of Etim's workforce is

An additional factor has been the comportment of Mr Alberto Predieri, the 72-yearold liquidator and a leading bankruptcy lawyer and former Olivetti board member. To the dismay of creditors, he has

Florence, been difficult to contact and delegated extensively.

As a result, those affected by the Efim liquidation are exasperated and angry. "The liquidation of Efim is the greatest fraud ever perpetrated by a government in Europe," says Mr Giustino Bello, who acts as co-ordinator for 400 small and medium-sized Italian and foreign creditor companies owed more than L400bn.

We are dealing with a state holding which a year after being put into liquidation has not paid a single small creditor, at least 30 of whom risk going under as a result," he

PILKINGTON, the UK glass group, and Techint, the Italian-Argentine industrial

concern, are this week expected to sign a

contract to buy Siv, Italy's lossmaking

glass producer. The deal marks the first

big disposal in the year-long liquidation of Efim, formerly Italy's third-biggest

state holding company.
Pilkington and Techint, advised by

Schroders, the UK merchant bank, are

paying L210bn (£88.9m) for Siv, which

lost L61bn before tax last year. The price

represents a substantial discount on the

company's net asset value of about

L300bn. However, the purchasers are tak-

Buying joint control of Siv will boost

Pilkington's geographic and product range and narrow the gap with France's

ing on L250bn in debt.

The supplier creditors, owed

retained his consultancy in IA,000bn, should have begun to be paid in early April. Last week the Ciampi government promised 30 per cent would be paid "rapidly". The small suppliers, lacking in muscle, remain sceptical and have initiated in Turin a court action to impugn the Efim liquidation decree, converted into law on February 17, as unconstitu-tional. They have also

> counts on VAT and relief on social security payments. The banks, owed L8,800bn, are in no better a position. The Amato government badly damaged Italy's international credi-

suggested that they be paid in

the form of tax credits, dis-

bility by failing to consult for-

of the liquidation and by seeking to impose a two-year moratorium on what the banks assumed to be sovereign debt lodged with Efim and its subsidiaries. "The handling of this was the greatest error of my government," Prof Amato

After a series of acrimonious encounters, the foreign bank creditors owed L3,500bn have obtained satisfaction on the terms of payment. But they have received no money because of the controlling veto of Brussels.

freely admits.

The closure, rationalisation and sale of the holding's companies was initially thought likely to cost L10,000bn-

interest charges at 13 per cent, the need for fresh capital to sustain viable company operations and the cost of shedding labour and almost certainly maintaining some companies beyond the programmed two-year liquidation

The Ciampi government is being obliged to allow some L4,000bn in 1994, according to those familiar with the liquidation process. They also say if all debts are to be honoured the ultimate cost could exceed L17,000bn, a figure that includes the offsetting income from asset sales.

Given that so much public

ther job cuts are virtually certain over the

about L100bn in the next three years.

Pilkington joined forces with Techint,

which specialises in steel and which has

plants in Italy and Latin America, to

improve its chances in the bidding pro-

cess. In the end, however, the two part-

ners were the only bidders. Techint is

cash-rich and has already participated in a number of Latin American privatisa-

tions. It, too, has been keen to raise its

Dismantling Italy's lossmaking industrial giant

The purchasers are expected to invest

den will be much greater, with few questions have been asked about how the group was allowed to get itself into such a mess. The simple answer may be that Efim had been long regarded as a dustbin into which lossmaking industries were tipped and kept alive to promote political patronage with lavish use of state funds.

Efim was an emblem of the politico-economic system that embedded itself in Italy from the 1950s. Created in 1962 as an industrial hospital aimed primarily to sustain companies committed to expanding in the Mezzogiorno, Efim was loosely managed and politically manipulated from the outset.

As part of a political deal, Efim was allowed to be a Socialist fief, while IRI, the larger public holding, was in the hands of the Christian Democrats. Thus at the time of liquidation Mr Gaetano Mancini, cousin of the most powerful Socialist politician in the south, was chairman and his deputy was Mr Mauro Leone, a Christian Democrat and son of a former president of the Republic. Mr Leone was arrested in March on charges of fraud in connection with the running of Nuova Safim.

Breaking the political hold on Efim and reshaping the entire role of the public sector in the economy was Prof Amato's prime objective in liquidating the holding. Indeed, as a Socialist linked to the then leader, Mr Bettino Craxi, he saw getting rid of Efim as a demonstration of his own impartiality and concrete proof that the state was set to reduce its interventionist role in industry and would no longer underwrite lossmaking busifinances deteriorated, weighed down by losses in the aluminium industry (Alumix accounted for almost half the 1991 loss of LL,176bn) and the increasing crisis in the defence industry. But all the businesses were sustained by an unquestioning belief from suppliers, creditors and managers that the state was behind Efin

We thought it was gilt-edged dealing with Agusta: it was military helicopters, Euro-defence and state-owned, observed one disillusioned British supplier. When it was placed in liqui-

dation Efim was losing L37 for every L100 of turnover, and of the 120 companies only 33 were in profit. Mr Predieri commented recently: "All the others were running at a loss, many for years, despite attempts to massage their bal-ance sheets to obscure losses." As liquidator Mr Predieri has had to follow awkward twin paths of trying to satisfy creditors and guarantee the survival of those companies considered viable. Efim has some good assets like Efim Ferroviarie, the mass transit manufacturer. But the danger throughout has been to avoid the state being saddled with a rump of lossmakers that are seen as necessary to maintain, either because of their regional importance (like aluminium smelting in Sardinia) or because of their "strategic" nature, as with the seven

defence companies This danger, plus job loss will be the main issue in the coming months - provided creditors start getting paid soon and the dispute with the

Crisis-hardened bankers tested by Efim hurdles

BANKERS in Italy have this decade grown accustomed to an annual crisis

First came the collapse of the Federconsorzi farm services group in 1991, then the liquidation of Efim last year. This year has brought new troubles with the rescue of Ferruzzi, Italy's second-biggest private company.

The involvement of the same big banks at the top of the creditors' list means the need to find fast, transparent solutions has become crucial to prevent embarrassing loan write-offs and lower profits.

Esim has proved easily the most complicated and, so far, frustrating of the three crises for bankers. Even by Italian standards, progress has been painfully slow, information uncommonly inadequate and the number of conflicting inter-

ests unusually complicated. "I'm just about to write the fifth, sixth or seventh letter to the prime minister calling for urgent action," says Mr Guido Rosa, chairman of the Foreign Banks' Association in Italy and head of the local unit of France's Société Générale.

Mr Rosa, a veteran of Federconsorzi and now tied up in the Ferruzzi saga, has lost count of the letters he has sent on behalf of foreign bankers. Foreign banks account for about L3,500bn (£1.47bn) of Efim's L8,800bn exposure to financial institutions.

"The problem is communication," he says. The bankers' first gripe is with Mr Alberto Predieri, one of Italy's most experienced liqcial administrator put in to run Efim last year. Complaints

approval of his methods; "eccentric" is one of the more polite words used.

The European Commission runs Mr Predieri a close second. Its decision to block plans to repay creditor banks, on the grounds that the Italian government's proposal represents unfair state aid, places Brussels high in bankers' unpopu-

enraged by a second strand in

'I'm about to write the fifth, sixth or seventh letter calling for urgent action'

the Commission's argument; that they should have first asked themselves whether Efim was the recipient of illegal state aid before agreeing to lend it money. As some point out, opining on the legality of state funding is something the Commission should have done

Italian Treasury officials are not free of criticism. Although relations between bank creditors - particularly foreign banks - and the Treasury have improved since confrontations last September, the climate remains unsettled. A three-hour meeting this month of about 120 bank creditors in London rekindled the idea of ostracising Italian borrowers in the international financial markets if matters are not set-

larity stakes.

years ago, not the banks.

bankers to recall the extraordinary confusion - virtually unprecedented for an advance industrial country - last August and September when

the Treasury issued three decrees within weeks, all of which left open more questions than they answered. The first decree was the biggest bombshell: it implied cred-itors would only receive 80 per cent of the face value of their Bankers have also been

loans. Once over the shock, banks attacked the proposal as a "unilateral rescheduling", unimaginable from a member of the Group of Seven industrialised countries.

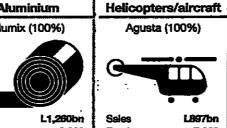

The Treasury could not have chosen a worse moment to antagonise the financial community, given the storm that was about to break in the foreign exchange markets. The decree provoked a stream of adverse publicity – some papers compared Italy to a banana republic – just when the authorities most needed the support and confidence of financial markets to keep the lira stable.

Although the government eventually climbed down and agreed to honour all the debts owed by Efim and its wholly-owned subsidiaries, differences were only partly resolved.

The next decree antagonised bankers further by setting the interest rates on the special bonds to cover Efim's borrowings at about half corresponding market rates. The decision renewed threats

to blackball Italian borrowers. It also signalled a tense period in which bankers considered using a legal technicality to put into default loans by some Italian state-owned groups being transformed into joint

ernment and the banks have that to a Japanese or US bank thawed since, partly because of a greater willingness by Treasury officials to meet the banks. However, many foreign bankers are bitter over what they view as unprofessional conduct by the authorities. The severest criticism is levelled against the lack of detail about Treasury plans to repay lend-ers and delays in supplying

information. One foreign banker says some, who "knew Italy and understood the mentality", tried to explain it was unreasonable to expect anything betpatience, as these things tend to sort themselves out in Italy which has no first-hand knowledge of Italian business."

The ill will explains why, even today, some bankers believe Rome is using the European Commission's opposition to repayment as an excuse to avoid compensating creditors. Mr Rosa thinks such a view is far-fetched, as the Treasury has already allocated funds for repayment and the total bill is mounting as accrued interest builds up. But some bankers are sceptical.

"The Treasury promised that repayments would start by the end of April. Then the Commission stepped in and everything came to a standstill. Now Trea-

Relations between the gov- in the end. But try explaining sury officials say matters are outside their control, while the situation in Brussels is confusing at best," says the head of one European bank in Milan.

Once the Commission's block is lifted, bank creditors will still have a string of grumbles. Foremost is that repayment should be extended to Efim subsidiaries which are less than 100 per cent owned by the parent company. The list includes important operations such as the Breda Costruzioni Ferroviarie railway equipment

Bankers are also confused about how they will be repaid. Originally, the Treasury announced plans to issue special bonds, denominated in currency loans by the group,

either lire or Ecus. This year, were terminated before their however, the Treasury's bor- official maturity on the rowing arm was cleared to embark on an international borrowing programme to raise funds to pay back creditors implying that repayment would come in cash.

"It's totally unclear. No one understands anything about this," says Mr Rosa. Mr Predieri also has a bone to pick with some of Efim's bankers. Some have decided unilaterally to terminate swap deals - which are complicated

financial transactions based on arbitraging interest rates or currencies – for £fim and its subsidiaries. The swaps, linked to foreign

grounds of Efim's financial crisis. However, aborting the deals has raised the group's debts yet further in lira terms because of the currency's devaluation since the swaps were signed.
The banks are likely to be repaid eventually and some

lessons are likely to be learnt along the way. But many bankers may by then be worrying about the next Italian crisis.

Rome plots survival course for defence industry

ITALY'S defence industry is being slimmed down and reorganised as a result of Efim's liquidation, leaving the state with a strong centrally-controlled stake in the business.

Closure or sale to foreign buyers of Efim's seven defence companies would mean a drastic cut in Italy's indigenous armaments and aerospace production capacity. Efim's Oto Melara, Breda Meccanica, Officina Galileo and SMA, together with the three companies in the Agusta group, produce items ranging from missiles, naval artillery, light armaments and armoured vehicles to helicopters, jet trainers and radar appli-

The combined annual turnover of L2,100bn (£889m) is equivalent to almost half the nation's

Finmeccanica is the key rescue vehicle, writes Robert Graham

current annual defence procurement and main industrial arm of IRI, the

Equally, with Efim's defence com-panies accounting for a third of the holding's workforce and nearly 20 per cent of accumulated losses, the hiving off of this activity has been an essential step in the liquidation

From the outset the previous gov- and abroad - plus the need to balernment of Prof Giuliano Amato decided to ensure the survival of an approach to the stock market to Effm's defence interests. The current raise capital - Finmeccanica decided to ensure the survival of administration of Mr Carlo Azeglio Ciampi has not altered this policy. The path chosen has been to

merge these defence interests with

Finmeccanica, the high-technology

principal state holding company. Synergy exists, as Finmeccanica has extensive defence interests centred on aerospace through its Alenia subsidiary, whose programmes include the new European fighter aircraft. But against a background of declining defence procurement at home ance its own books and prepare for

remains a wary partner. The group stipulated it could only assume Efim's defence portfolio if there was no financial charge, jobs were shed and plants rationalised, and the government announced a defence procurement programme which guaranteed orders that in turn provided insurance for production lines to survive.

In January a temporary solution was agreed: to lease the companies to Finneccanica for six months, giving management but not financial responsibility. Last Wednesday, two weeks

behind schedule, the government forced Finmeccanica's hand, in effect decreeing the takeover. Government and Finmeccanica must now bargain over the company's demand that a minimum of L10,100bn is available over the next decade in procurement

1,900 jobs are cut from the workforce On this basis the Efim companies

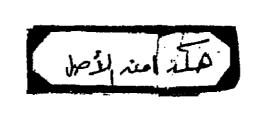

could begin to show a profit by 1995. However, big job losses, especially where accompanied by plant clo-sures, will be contested by the unions, which have already won considerable concessions in the case of the restructuring of Finmeccanica's

The key will be the future of Agusta, which has good helicopter technology in the EH101 venture with Westland of the UK but which lacks orders. It has also been poorly managed and its financial position is

extremely weak, having lost L1,674bn between 1987 and 1991 and recorded a further L858bn loss last year - almost one lira for every lira received in sales. Agusta has made the mistake of

accumulating excessive stocks that totalled L1,600bn at the time of Efim's liquidation. It will get about L400bn of the L1,068bu earmarked by the liquidators for the defence side of Efim. But

this will be insufficient, and the company cannot afford to be in a weak financial position at a time of fierce international competition in the helicopter sector. Hanging on the fate of Efim's desence interests are also a mass of private contractors who are the most

MR Giuseppe Garofano, the former senior executive of the troubled Ferruzzi group, has admitted that Italy's second largest industrial empire was illicitly funding the Christian Democrat party.

The revelation emerged after he had been interrogated by Milan magistrates for more than 13 hours over the week-

The interrogations followed an exceptionally swift deal between Milan magistrates and Swiss judicial authorities following Mr Garofano's arrest at Geneva airport on Tuesday after being on the run for six

The return of Mr Garofano, who stepped down as chair-man of Montedison, Ferruzzi's chemicals group, in November 1992, promises to shed light on how the Ferruzzi empire has managed to accumulate debts of L31,000bn (£13bn). The debts plus heavy losses forced a consortium of banks to step in last month to salvage the

Among Mr Garofano's first admissions was that L250m had been paid to the Christian Democrat party in Lombardy from Ferruzzi-Montedison funds. Last September, when questioned by Milan magistrates, he had said this money had come from his own sources. It was on the charge of having provided this sum in illicit funding to the party that his arrest warrant was issued.

Milan magistrates believe the L250m represented only a small part of wider illicit funding. For more than six months the magistrates have been examining the dealings behind the reorganisation of the chemicals industry and Montedison's sale of its 40 per cent stake in Enimont to ENL the state oil concern. Mr Garofano is understood to know about this transaction, as well as others involving Enimont

minority shareholders. The magistrates are also examining the circumstances behind the unexpected announcement last month of an extra L350bn loss in Montedison's 1992 accounts after the group had already announced a L1,244bn short-

fall for the year. Mr Garofano is due to be Meanwhile, Milan magistrates have decided to keep holding Mr Gabriele Cagliari, the former chairman of ENI, to continue their inquiries into the Enimont affair and other mat-

Alija Izetbegovic: boycott

Izetbegovic demands end to Serb advance on Sarajevo

Bosnia threatens to boycott talks

By Laura Silber in Belgrade and Frances Williams in Geneva

MR Alija Izetbegovic, the president of Bosnia, yesterday said he would boycott peace talks in Geneva if Serb forces pressed forward with their

assault on Sarajevo. Bosnian radio said Serb forces breached defence lines in three places on Mount Igman, an impor-tant Moslem stronghold. Fighting was also reported in Hadzici, just west of Sarajevo, where UN officials spotted 16 Serb tanks last week.

The Serb advance is aimed at forcing Mr Izetbegovic to accept the republic's ethnic partition, which he opposes as a legitimisation of "ethnic cleansing".
In an interview with a Belgrade

newspaper, General Ratko Mladic, Bosnian Serb commander, warned:

"It is up to Alija and those who advise him to think what to do. I have left Sarajevo to the end."

Serbian and Croatian leaders, meeting in Geneva at the weekend, denied attempts to carve up Bosnia between them and said their proposal for a loose confederation of three ethnic mini-states was the only way to lasting peace.

In a statement after talks with Lord Owen and Mr Thorvald Stolten-berg, the international mediators for former Yugoslavia, President Slobodan Milosevic of Serbia and President Franjo Tudiman of Croatia said speculation on a two-way division of Bosnia was "unfounded".

The two presidents plan to return to Geneva tomorrow or on Wednesday if the mediators succeed in convening a new round of talks on a confederal peace plan for Bosnia

involving all parties. The Bosnian Serbs and Croats support the plan and some members of the collective Bosnian presidency have said they are willing to discuss it.

But Mr Izethegovic at the weekend reiterated that peace talks cannot take place while Serb forces tighten their stranglehold on Bosnian gov-ernment targets. "We cannot go there if offensive activities in Bosnia continue, especially against Sara-jevo," he said after talks with Mr Vitaly Churkin, Russian President Boris Yeltsin's peace envoy.

Mr Peter Kessler, spokesman for the UN High Commissioner for Refugees, yesterday accused local Croats of "inhumanity" and "sheer obstruc-tionism". He said relief operations had "ground to a halt" after Croat fighters were blocking convoys from reaching about 1.1m refugees in cen-

ning.
Meanwhile, Croatian President Franjo Tudiman yesterday formally re-opened the strategic Maslenica bridge, which joins northern Croatia with its southern Dalmatian coast, after Serb forces earlier in the day had shelled the area.

Mr Tudjman called yesterday's delayed opening a "great victory of Croatian politics" and a "big step" towards re-establishing Croatian control over its territory. The temporary pontoon structure, spanning the Maslenica canal, was due to replace the bridge destroyed in the

Croatia on Saturday endorsed an agreement, already backed by rebel Serbs, to demilitarise the bridge and place it under UN control by the end

New EC-compatible regulations brought into effect

Austrian retailers fiddle sell-by dates

By lan Rodger in Vienna

AUSTRIA, the country that a few years ago shocked the world by lacing its wines with anti-freeze (ethylene glycol) has now taken to fiddling sell-by dates on packaged foods, especially meats.

It emerged last week that Austrian food retailers routinely take packets of sausages and sliced ham off their shelves when they reach their sell-by date and simply repackage them with a new sell-by

The practice seems particularly widespread in Tyrol, the heart of Austria's alpine resort region. Last September the

tory made some routine tests of 29 specimens of packaged meats from supermarkets there and found that 20 were obviously older than the sell-by date indicated.

A further test in March

goods - such as low ceilings on

imports of cars into Spain and Portugal, shoes into Spain, and television sets and vodka into France. Mr Parmen agrees these restrictions exist but says they are strictly disapproved of by the EC and "will be removed".

The most crucial commodity is aluminium, though. According to EC figures, aluminium exports from the Soviet Union to the EC were running in 1989 at 147,000 tonnes while in 1992, restrictions against Russian the former Soviet states exported to the Community

529,000 tonnes (85 per cent of which came from Russia), an increase of nearly 250 per cent. At the same time, the EC aluminium market grew from 3.36m tonnes to 4.24m tonnes an increase of only 14 per cent.

The aluminium coming into the EC is being sold at very low prices," said Mr Parmen. The European producers cannot possibly compete with it." He says that the Community does not want to introduce ceilings, but will be forced to do so

Boycott threat looms over S Africa talks

Johannesburg

SOUTH Africa's constitutional negotiations resume today under the threat of withdrawal by right-wing parties including the white-supremacist Conservative party and the mainly Zuhu Inkatha Freedom party.

Both the Conservative party and Inkatha have said they will boycott today's talks, in a clear attempt to exert pressure on remaining negotiators, who are now drawing up an interim

Both parties have said that their participation in the talks will be conditional on the interim constitution: unless it provides for self-determination for Afrikaners, CP leader Ferdi Hartzenberg has said his party will permanently leave the talks. Chief Mangosuthu Buthelezi of Inkatha has threatened to launch a breakaway constitutional convention unless the draft constitution meets his demand for a federal state. Such brinkmanship is proba-

bly inevitable, as constitutional negotiators reach the crucial stage of considering the draft of a new constitution for the next five years. The draft is being drawn up by a commit-tee of legal experts and will be submitted within weeks to the multi-party negotiating forum. Today's talks are likely to be largely technical.

Inkatha walked out of the forum a fortnight ago, after a majority of parties fixed April 27 next year as the date for South Africa's first multi-racial elections. The Conservative party only made clear its decision to boycott the talks last weekend. The two parties are the leading members of the sixmember Concerned South Africans Group. Some other members of the group are likely to participate in today's talks.

Within the next few weeks, Inkatha will have to decide finally whether to participate in the talks, in which Inkatha negotiators have already gained major concessions from the government and the Afri-can National Congress. They fear that Inkatha could launch a full-scale civil war in Natal province, where political vio-lence has claimed thousands of lives since 1984, unless it is accommodated at the talks. But negotiators from the ANC and government have become increasing exasperated in recent days as Chief Buthelezi has appeared to reject these concessions, and repeatedly threatened to lead his own

breakaway convention. Inkatha negotiators say chances are good that their party will return to talks eventually. But the Conservatives, who demand a race-based state where non-whites would have inferior political rights, seem far more likely to withdraw permanently. The other 25 par-ties to the talks all support a multi-racial state with equal rights for all races, and are unlikely to accommodate the

NEWS IN BRIEF

Liberian civil war foes agree peace settlement

WARRING factions in Liberia and the Interim Government of National Unity announced at the weekend they had reached an accord on ending the long and brutal civil war in the west African state, Reuter reports from Geneva.

Officials of the three main groupings involved in the conflict said at the end of a week of negotiations that the accord would be formally signed by their leaders in Cotonou, Benin, on July 24. The groups said sticking points remained, but they were confident that agreement could be reached on these over the coming

According to a communique signed by the three groups, a transitional government representing all the factions would be set up and a United Nations-supervised ceasefire would go into effect after next week's Cotonou signing.

Russia reinforces Tajik troops

Moscow sent military reinforcements to the troubled central Asian republic of Tajikistan at the weekend, where fighting between the government and its Moslem opponents threatens to involve Russia, Chrystia Freeland writes from Moscow. Russian officials called for revenge last week after the Tajik opposition forces, aided by seasoned mujahideen fighters from neighbouring Afghanistan, killed 25 Russian soldiers in a shoot-out on the Tajik-Afghan border.

Kabul accused Russia of mounting a retaliatory attack against Afghan villages close to the border in which they say more than 80 people were killed or injured.

Russian and Tajik officials deny the charges, but over the weekend top Russian military leaders vowed to crack down on the Tajik opposition, which, according to Russian Defence Minister Pavel Grachev is preparing a major offensive aimed at seizing the entire country.

Czechs and Slovaks in border pact

Slovakia and the Czech republic agreed at the weekend to set up joint patrols along their recently created common border, after talks at a summit meeting of the 10-nation Central European Initiative, writes Anthony Robinson in Budapest. Mr Vaclav Klaus, the Czech prime minister and Mr Vladimir Meciar, his Slovak counterpart, made the move to reduce the flow of illegal immigrants from eastern Europe who are barred by Bonn's newasylum laws from entering Germany.

Egyptian general escapes ambush

Moslem militant gunmen avenging 14 comrades hanged in the past five weeks on the orders of military courts ambushed an Egyptian army general's car in Cairo yesterday, Reuter reports The general escaped unhurt. Police shot dead one of the attack-

ers after he hijacked a taxi and passers-by seized two of the other gunmen and handed them over to police.

Estonia brushes off Russian vote for autonomy

By Matthew Kaminski in Vilnjus

ESTONIA'S Russified north-east corner, smarting over the country's language and citizenship laws, at the weekend voted heavily in

favour of regional autonomy. Early results from Narva, the industrial border town, showed 97.2 per cent of voters in favour of territorial autonomy within Estonia, the Russian Itar-Tass news agency reported. Nearby Sillamae

counted 98.6 per cent. But the weight of the result may be diluted by the low turnout, reported to be 54 per cent in Narva.

The Estonian government issued a statement claiming that less than 50 per cent of registered voters had participated in the referendum. Under Russian law, and former Soviet law, a turnout of less than 50 per cent would make the referendum invalid.

But the Estonian govern-ment has anyway declared the vote illegal, and vowed to protect its territorial integrity. The referendum was called after the Estonian parliament

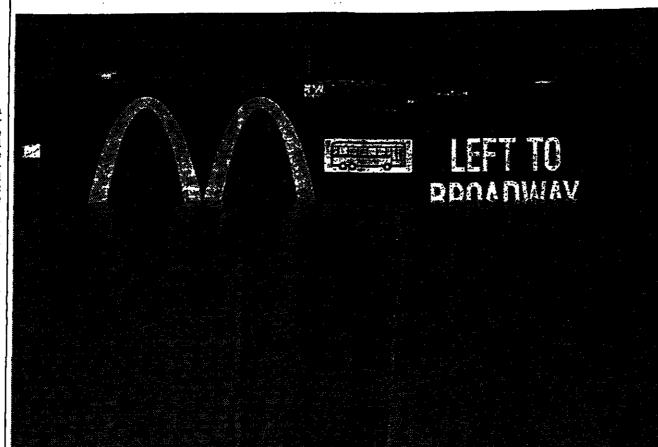

passed an aliens law which many in the Russian minority consider discriminatory. The law was amended last weekend to meet concerns voiced by the Council of Europe and the Conference on Security and Co-operation in Europe, but Russian leaders dismissed the changes as cosmetic.

Mr Vladimir Chukhin, chairman of the Narva city council and organiser of the referendum, told Russian radio that the vote would at least force the Estonia government to negotiate with the Russian community, which accounts for 600,000 of Estonia's 1.6m

people, over the aliens law.
The Russified region has always been part of Estonia.

Russia last week cut off oil supplies to Belarus, the former Soviet republic which has kept close ties with Moscow, Lithuania's state news agency, ELTA, reported at the weekend. Belarus owes Russia Rbs72bn. despite a 50 per cent subsidy. Belarus paid Rbs10bn on July 15. Natural gas supplies to the three Baltic countries were cut off last month, but pipelines were opened once the states

Mississippi floods bite into Big Mac

A McDonald's billboard in West Quincy, Illinois, submerged at the weekend after the Mississippi River broke through a levee protecting the only passable bridge along a 200-mile stretch of river from St Louis to Burlington, Iowa. Volunteers had struggled day and night for six weeks to maintain a sandbag barrier that was keeping open the Bayview Bridge to Quincy. But on Friday night the barrier gave way, and rushing water covered up to 14,000 acres including the entrance to the bridge.

Israel warns of Lebanon retaliation

By Julian Ozanne in Jerusalem

ISRAEL yesterday issued a clear and public warning it would strike against Arab guerrillas in southern Lebanon in retaliation for recent attacks which killed five Israeli sol diers.

"The Israel Defence Forces is ready with reinforced troops to defend the towns and residents of the north. It will act against those who hit its forces in the security zone," Mr Yitzhak Rabin, the prime minister,

After a long cabinet discussion Mr Rabin also admitted that Israel had heavily reinforced the large area it controls inside Lebanon in the past week.

Reports have suggested Israel has sent up to 1,000 troops - including a mechanised company - and 22 pieces of large artillery to bolster its existing force of 1,000 men and a 3,000-strong Israeli financed Lebanese militia in the zone.

Israeli airforce planes flew across the Lebanese capital Beirut yesterday and staged mock raids over the south. The fresh Israeli military activity followed an attack on an Israeli patrol in the zone on Saturday, which left two sol-diers wounded and a Lebanese guerrilla dead.

Syria, blamed by Israel for the upsurge of attacks, said over the weekend any attack against Lebanon was an attack against Syria.

Clinton to dismiss FBI chief in perks row

By George Graham in

MR William Sessions' six-month battle to hold on to his job as director of the US Federal Bureau of Investigation is expected to end this week with his dismissal by President Bill Clinton.

Mr Sessions, under fire since a Justice Department investigation in January accused him of misusing FBI perks and per-

sonnel, has so far refused to Freeh is a former FBI agent resign, maintaining that all the charges against him are

But after a meeting on Saturday with Ms Janet Reno, the attorney-general, it appeared that if Mr Sessions would not go gently, Mr Clinton was at last prepared to dismiss him. Mr Clinton on Friday met Mr

Louis Freeh, a federal judge in Manhattan and a leading can-didate to head the FBL Mr doms and has failed to gr with some of the US's pressing crime problems.

and federal prosecutor. The wrangle over Mr Sessions' alleged ethical lapses has obscured a more profound struggle within the FBI, and the new director will have a

hard task reasserting control over an agency which some critics say has disintegrated into a number of feuding fiefdoms and has failed to grapple with some of the US's most

One of Mr Sessions' demands has been that he should remain in office until his successor is confirmed by the Senate, thus denying the chance to serve as acting director to a deputy with whom he has been at loggerheads.

Some White House officials are sympathetic to Mr Sessions' denial of the charges against him, which include personal use of government cars and aircraft, and this may

explain why Mr Clinton has been willing to wait so long to allow him the chance for a more or less graceful exit. Whatever the truth behind the ethics charges, it has

become clear that Mr Sessions' ability to serve as director has been considerably impaired.

Mr Sessions, appointed by President Reagan, is half way through a 10-year term of office, but can be dismissed by the president.

Zurich tries new fix for drugs problem

Ian Rodger reports on a Swiss initiative legalising the use of heroin

URICH has never been known as a centre for bargains, but starting next year a few selected heroin addicts will be able to get their fixes in the city legally for only about SFr3 (\$1.90) a time.

The offer is part of the city government's latest initiative, unveiled this week, for dealing with its outsize and persistent drug problem.

The initiative is itself part of a three-year national study involving 700 addicts to provide evidence on the pros and cons of legalising hard

Switzerland has astonishingly high rate of hard drug addiction, with an estimated 30,000 addicts, nearly % per cent of the 6.8m population. The phenomenon is generally attributed to disaffection from a stiflingly orderly society and to the country's very high level of

Zurich has long been the magnet for the country's community protested, addicts, notably because the eventually winning the

city's socialist-green coalition government has favoured a liberal drug policy. It has stopped the police making arrests for minor offences and provided shelter and rehabilitation programmes for those in need. Since 1988, it has offered free needles to all to

prevent the spread of Aids. By the late 1980s, about 1,000 people were regularly congregating in Platzpitz, the once beautiful park behind the main railway station transformed into a ghastly scene of decline and death.

Platzspitz, or Needle Park, as it was sometimes called, also became a huge drug dealing centre, attracting mob dealers and hundreds cash-and-carry customers from Zurich's rich suburbs. And, as the park was very close to the downtown business and shopping area, muggings, robberies and petty crime in the area soared.

city's business

council's commitment to close the park early last year. City leaders implemented a dispersal

policy, sending non-Zurich residents back home and billeting local addicts in small hostels. But within days, the drug scene was reforming in an adjacent run-down neighbourhood, and efforts by the police to break it up were about as effective as trying to scare off pigeons from London's Trafalgar Square.

n the past few months, the scene has gradually moved to an abandoned railway station a few hundred metres from Platzspitz. Last month, police staged a surprise inspection and discovered that the congregation there was much the same as it used to be at Platzspitz.

Of the 931 people checked, only 178 were city residents. Most of the dealers were former Yugoslavs, many of them asylum seekers who, under Swiss law, cannot be

processed.

"Things have got worse," Mr Andres Oehler, the town help answer two key questions council's spokesman on drug associated with hard drug council's spokesman on drug matters, admits. "The closing of Platzspitz has not had the hoped-for effect." Mr Oehler says fresh attempts will now be made to disperse the non-resident

addicts, and most of the residents will become involved in the planned new legal drug distribution programmes.

The city itself will set up a new treatment centre where it will supply 50 addicts with not only heroin injections and cocaine impregnated cigarettes, but also with

counselling. A private charity will do the same for another 150 female addicts, most of whom earn their drug money from prostitution. Mrs Emilie Lieberherr, head of the city's social services

department, said the aim of the

programme was to help the

addicts survive, stabilise their

expelled until their physical and mental health applications have been and, ultimately, to get them off Unfortunately, it will not

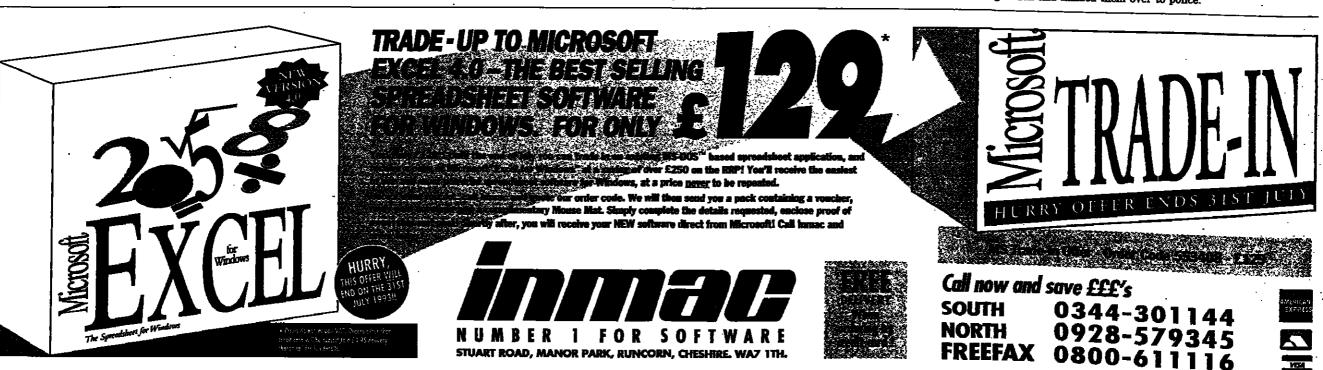

liberalisation - whether more people would be attracted to drugs and whether the criminal problems associated with it would abate. Mrs Lieberherr admitted that

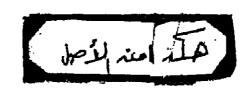

the programme was only "a

drop in the ocean" in trying to

solve Zurich's drug problem. But for the moment, it is all the conservative leaders of the federal government will allow. Meanwhile, the city has finally completed cleaning up Platzspitz at a cost of SFr1.6m. much of it spent on sifting painstakingly through the earth in search of used needles that would be deadly for a crawling baby.

The park, which now has high grille fencing all around it, is open only from 11am to 2pm on Tuesdays and Thursdays. Drug addicts are

Mould cracked but not yet broken

By Charles Leadbeater in Tokyo

JAPAN is embarking on a period of political restructuring without precedent since the end of the second world war, when the merger of two pre-war parties gave birth to the Liberal Democratic party, which has ruled since

The 1955 mould of post-war Japanese politics was not broken by yesterday's general election but it was cracked, possibly permanently.

It is too early to say that the new conservative parties which were the main winners yesterday will provide the Japanese public with a new choice, as permanent alternatives to the ruling Liberal Democratic party and the socialist opposition.

But the new parties - the Japan Renewal party, Japan New party and Harbinger party - did well enough to hold the balance of power in the next parliament, to press for political reforms and to lay the foundations for becoming an independent third force at subsequent elections.

Their success reflects more than disaffection with the scandal-ridden LDP and disillusion with the impo-

tence and ideologically hidebound nature of the older opposition parties. It stems from an appetite for change, which has not been entirely extinguished by the cynicism forced on voters by repeated political scandals. Younger, independent urban voters crave not just new party labels and leaders, but a more open style of politics, which deals in debate and

Yet it is far from certain that is what they will get. Even though the LDP has lost its

overall majority in the parliament's lower house, it delivered a telling display of electoral resilience. It maintained its strength in spite of its failure to introduce political reforms, the worst economic downturn for 20 years, a deeply unpopular prime minister, and rumbling scandals which are due to surface in court again this

As Japan moves into a possibly extended period of coalition govern-ment, the LDP is likely to be the largest party and so the central building block for any coalition. The endless war within the party, between its factions for positions and patronage. will be complicated by jostling between the LDP and its potential

coalition partners. The scope for Japanese politics being decided by shady deals in smoke-filled hotel rooms has probably grown as a result of this election, not

Hopes that the election could set in train sweeping and lasting changes in the Japanese political system rest with two developments.

First, the next government is almost certain to focus on political reforms. These are likely to include changes to the electoral system involving the introduction of propor-tional representation, designed to encourage more open debate about national policies and priorities. Political reform will throw the system into a protracted period of turmoil as parties adjust to the unfamiliar rules.

This flux should be advantageous to the new conservatives who will enter the next election with more money and candidates.

Second, much depends on the vision and determination of the new parties' leaders. They have established an impressive electoral beach-head, which will attract further supporters and donations from the business com-

But to extend beyond that to become a viable alternative to the LDP will be long, hard work.

The collapse of the socialists' sup-port has probably robbed the Japan Renewal party of the hopes it had a month ago of leading an opposition coalition to dislodge the LDP.

The LDP's resilience means the new conservatives can harbour few hopes of winning seats from the ruling party. They will grow quickest at the expense of their erstwhile partners, the ailing Social Democratic party. So this election could set the scene

for an intensifying battle within the opposition, rather than between the opposition and the LDP. The balance of power within the opposition will have to shift, away from the left and towards the centre, before the LDP will face a credible challenge from an alternative coalition.
Yet today the leaders of the new

conservative parties will not be worrying over such distant doubts about their prospects. The LDP may not be turfed out of power, it will almost certainly have to share power for the first time for almost four decades.

Flushed with their success the new conservatives know that in spite of the LDP's size, they will be setting the pace in Japanese politics.

How candidates fared

NOBORU TAKESHITA: THE 'PURIFIED' EX-PM

Old ways die hard in the most conservative regions of Japan. Mr Noboru Takeshita, former prime minister, was re-elected yesterday at the top of Shimane's list of candidates, with over 100,000 votes.

For many Japanese, Mr Takeshita symbolises the cor-rupt ways of the country's pol-

He was forced out of office after being linked to the Recruit stocks-for-favours scandal in 1989 and, more recently, public criticism mounted after revelations of his links to gangsters.

However, among his electorate, he remains the pride of Shimane, a rural prefecture in western Japan.

The region lacks any big industries and is sparsely populated but, thanks to Mr Takeshita, has the most public works spending allocated per

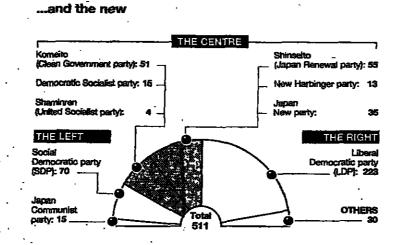

His supporters will consider Mr Takeshita's victory as a "purification" after all the

APAN'S political leaders. old and new, were count-ing heads early today in preparation for the horse-trading that will determine the shape of the next government. With the Liberal Democratic party having lost its majority, leaders were deciding whom they would back in a coalition

For the old leaders, the poor results may force resignation. Mr Kiichi Miyazawa, the LDP leader, apologised for having brought distress to the party, while Mr Sadao Yamahana, head of the Social Democratic party, the largest opposition party, saw half of his MP lose their seats and was "contem-

plating" his political future. Meanwhile, Mr Tsutomu Hata, head of the Japan Renewal party, and Mr Morihiro Hosokawa, the Japan New party leader, suddenly find themselves with the power to create a government. If the two parties join forces, along with the SDP and other opposition partners, they will have the numbers to force the LDP into opposition for the first time

since 1955. LDP officials were hoping that Mr Hosokawa, who has kept his intentions vague, will join it in a coalition in return for a senior post in a new gov-ernment. After noting that the LDP will not be able to form a government, Mr Hosokawa said: "I will have to consult my members before making a deci-

्रायाच्या ।

Mr Hata, whose defection from the LDP prompted the election, said he would not rejoin the party, though some JRP officials have indicated that, if made prime minister, Mr Hata might accept a coalition with the LDP or the SDP. Whichever way he turns, Mr Hata may find his time at the top is short.

The arithmetic is made more complicated by the possibility of further splits from the LDP or a break-up of the SDP. By law, parliament has to convene within 30 days, giving leaders The Japanese constitution says that an extraordinary parliamentary session to elect Japan's next prime minister must be called within 30 days of the general election, writes Emiko

Extensive negotiations between parties to decide on details of a new coalition may take up to a month, preventing the Diet from convening before the August 16 deadline. It has usually taken more than 18 days for parties to convene the past 16 special parliamentary sessions following general elections.

After the special session is convened, there is no time limit for the election of the prime minister. In 1979, the session took a record eight days to elect Mr Masayoshi Ohira because of fric-

the luxury of time in mixing and matching the nine main parties in the quest for a majority of the 511 seats.

were being cagey. The Democratic Socialist party, with 15 members elected, had offered support for the SDP and JRP in a coalition, but last night hinted that it would back the LDP.

Communist party, also with 15 members, could also find itself being courted for an opposition coalition.

including the left-wing socialists and the relatively rightwing JRP, with the communists thrown in to make up the numbers, gives an indication of the potential instability in coming months. Yesterday's election has set the scene for the next one, expected within a

it could be brought down by the opposition parties in coali-tion. The JRP, which did not have enough time to recruit candidates this time around, is already preparing for the next election, when it will have many more than the 69 representatives who stood yester-

Having successfully pres ented themselves as an alternative to the SDP, the newer par-ties, the JNP and JRP, must next prove that they are an alternative to the LDP, which they have not yet done. Most of their votes have come from the SDP, which gained in the past

from disgrantlement with the LDP but which has been content with its role as an opposition party never likely to rule. The form of the new government is likely to be determined more by personalities than by policy or ideology.

The resignation of Mr Miyazawa will make it easier for one of the opposition parties to join the LDP in a coalition, as exit polls yesterday suggested that 85 per cent of voters want him to resign. A likely successor is Mr

and will be forced to detail pol-Toshiki Kaifu, a former prime minister with a reputation as a reformer. He was dumped by the LDP two years ago after suggesting reforms to the electoral structure, the issue which triggered the election last month. Officials at the JRP and JNP have suggested that Mr Kaifu is preferable to Mr Miyazawa, but have not given com-

mitments of support. The appointment of Mr Kaifu as head of a coalition will not necessarily bring stability or reform. Like Mr Miyazawa, he does not have the support within the party to demand that other factions do his bid-

Mr Kaifu is seen by the heads of the LDP's larger factions as a socially acceptable leader capable of guiding the party through political turbulence - and back to the good old days, when there was an orderly queue for the prime ministership

Voters inspired to stay at home

By Emiko Terazono in Tokyo

VOTER turnout for yesterday's general election fell to a near record low, suggesting that the political fervour of the campaign was not enough to inspire some Japanese to make a trip to the polling stations.

Before the election, the furore over the fall of the government seemed to heighten interest among the electorate. However, only an estimated 67.2 per cent turned out to the polls. The figure is 6 percent-age points lower than the previous election in 1990 and 5 points lower than the average of the past 18 elections.

While some analysts blamed a televised sumo final and bad weather, the lack of issues directly concerning the ordinary voter is seen as the main reason for the low interest. Calls for political reform dominated the platforms of most parties, and some voters seemed to be turned off by the absence of debate over issues such as tax reform and the controversial dispatch of Japa nese troops to United Nations

peacekeeping operations.
Polls taken just before the election indicated that 43 per cent of the electorate had not decided who to vote for. The new reformist parties which have splintered from the ruling Liberal Democratic party has

confused many voters. Apathy was most prominent among urban voters, with the turnout around or below 60 per cent in Tokyo and surrounding areas such as Chiba and Saitama. In contrast, rural Japan, which has a high proportion of faithful LDP supporters, saw a large turnout. Over 77 per cent visited the polls in Shimane, the constituency of Mr Noboru Takeshita, a former prime min-

US and Vietnam in accord on MIAs

By lain Simpson in Ho Chi Minh City

A HIGH-LEVEL delegation from the US has left Vietnam with an agreement to base three State Department officials in Hanoi. They will be the first US diplomats in Vietnam since the end of the war in 1975.

The agreement was reached after three days of talks in Hanoi with ministers and other senior Vietnamese officials. The diplomats will work with US military personnel in Vietnam searching for evimen listed as missing in action

For Vietnam, Deputy Foreign Minister Le Mai said his government has accepted the proposal, although he said some technical questions had still to be resolved.

Mr Winston Lord, the US assistant secretary of state who led the delegation, stressed the three officials would be in Vietnam strictly to work on the MIA issue. However, Vietnamese officials said privately they hoped the move would make diplomatic exchanges between the two countries easier and lead to a gradual improvement in rela-

The US delegation said the diplomats would also "support American citizens, including families of our missing and the Vietnam veterans who have been invited by the Vietnamese government to visit

Vietnam President Bill Clinton ordered the US delegation to Vietnam to assess local co-operation in the search for MIAs. Hanoi says it is already doing all it can, but many Americans are not convinced and Mr Clinton has said there must be tangible progress on the issue before relations between the two countries can

Mr Lord and his colleagues said at the end of their visit that they were pleased with the assurances they had received. However, the four representatives of Vietnam war veterans' groups in the delegation said they would not be convinced until they saw some concrete results.

The Vietnamese government believes that, with US diplomatic representation in Hanoi and with Mr Clinton's recent decision to unblock international lending, the process of normalisation with the US has taken a big step forward.

Vietnamese officials are now ping for the embargo to be lifted. This comes up for renewal on September 14 and Mr Clinton is under pressure from US business interests to let them into

Central bank action boosts Chinese yuan

By Lynne O'Donnell in Beliling

THE Chinese yuan rose 18 per cent against the US dollar last week after the central bank poured more than \$100m (£86.6m) into the money mar-

The yuan closed on Friday at Yn8.65 to the dollar; last month it had been trading at almost Ynll to the dollar at China's semi-official swap centres.

Chinese efforts to encourage people to save with banks, rather than concealing money at home, is paying off. Banks say that since interest rates on savings and fixed-term deposits were lifted on July 11 they have been so overwhelmed that hours have had to be

Lending and deposit rates were lifted by an average 1.38 and 1.72 percentage points, and the one-year fixed-term deposit rate moved up to 10.98 per cent in an attempt to encourage cash-strapped companies to repatriate hard currency to obtain yuan liquidity.

The interest rate increase was in tandem with a nationwide campaign to attract greater savings deposits from the population, historically suspicious of state financial institutions and believed to be hoarding millions of yuan in

China has recently admitted that banks are short of cash.

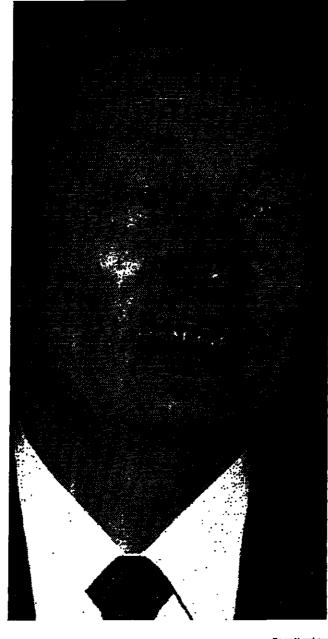

The Beijing branch of the industrial and Commercial Bank of China had its busiest day on record the day rates went up, according to the official China Daily newspaper, when new savings hit Yn61m (£7m).

The interest rate rise was one of the first steps taken by Mr Zhu Rongji, senior vice-premier, when he took on the extra role of governor of the Bank of China. In an attempt to cool the overheating economy and control inflation now running at 20 per cent in urban centres, Mr Zhu has taken steps to curb bank lending.

said the central bank was determined to strengthen the yuan to Yn8.3 to the dollar "and will pay any price for it". Quoting a Chinese finance official, the pro-Beijing news-paper said China aimed to achieve its target rate within the next six months - which would bring the yuan one step closer to the final target value

based Ming Pao Daily News

of Yn8 to the dollar. The black market price remains at about Yn9 to the dollar, while the official rate is Yn5.7 to the dollar.

Row over peacekeeping in Somalia shifts to diplomacy

Italy and UN in temporary truce

capital.

shot back

By Robert Graham in Rome and Ariane Genillard in Bonn

THE row between Italy and the United Nations over the conduct of peacekeeping forces in Somalia shifted over the weekend from public posturing to quiet diplomacy.

The differences are to be dis-cussed at a meeting on July 27 between Mr Boutros Boutros Ghali, UN secretary-general, and Mr Bruno Bottai, directorgeneral of the Italian Foreign Ministry. Until then all parties are expected to observe a cooling-off period.

The decision to hold a top-level meeting with the UN secretary-general followed urgent talks on Friday in Mogadishu, the Somali capital. between Italian diplomats and Admiral Jonathon Howe, Mr Boutros Ghali's special envoy. commander of UN forces, and US diplomats.

Neither side was willing to comment on the talks - in contrast to the mutual criticism

and the Italian government. The sole outcome was the formal announcement of the July 27 meeting. Mr Koffi Annan, in charge of

all UN peacekeeping operations, had called for the removal of General Bruno Loi, commander of the 2,600-strong Italian contingent in Somalia, claiming he had defied UN

Differences between the two sides to be discussed on July 27

The Italians gave their backing to Gen Loi, refused to call him home and reiterated their criticism of the way UN operations in Somalia had shifted from a peacekeeping and humanitarian role to enforcement. They feared this ricked turning toward an unwelcome occupational role, with its impartiality surrendered by the USsponsored call to outlaw General Mohammed Farah Aideed,

Russian space stance

By Shiraz Sidinya in New Delihi

INDIA has expressed regret at Russia's decision to freeze a \$350m (£233m) contract to supply cryogenic rocket engines and associated technology for India's civilian space programme but emphasised that it would cause no setback.

Foreign ministry officials expressed dismay that Russia has "yielded so blatantly to US pressure" to go back on its 1991 contract with India but a ministry statement at the weekend avoided direct criticism of the US. "While India remains willing to co-operate with other countries in the space sector for mutual benefit, it will continue to develop the required technologies

indigenously," it said. Mr Dinesh Singh, India's for-eign minister, told a parliamentary committee meeting on Saturday night that, though he did not see "an overall shift" in US policy towards India, the US's decisions would be based "on their self-interest as they see it". Mr Michael McCurry, US state department spokesman. said Moscow's co-operation in blocking the transfer of "sig-nificant" technology to India about which the US "had concerns" could be "worth bil-

lions of dollars". Dr Raia Ramanna, former head of India's Atomic Energy Commission, challenged the US position that the transfer of cryogenic technology was a violation of the Missile Technology Control Regime (MTCR). "Everyone knows that cryogenic engines cannot be used for defence purposes, and I cannot understand why such a powerful country [like the US] should feel so insecure about India getting some knowhow," he said.

Economists urge further irks Delhi India reform

By Alexander Micoli, Asia Editor

THE benefits gained by India from economic reforms already undertaken may be meagre unless they are followed by further steps to complete the transformation of economic policy, according to a new

report.
The report's authors - Mr Jagdish Bhagwati, professor of economics at Columbia University, and Mr TN Srinivasan, professor of economics at Yale University - strongly support the reforms introduced by Finance Minister Manmohan Singh, who commissioned the report. But they say that increases in productivity and exports may be small without

Among reforms they recom-mend are further cuts in the budget deficit by widening the tax base, using privatisation proceeds to retire government debt and cut interest costs, and ending financing of the deficit through the banking system.

The government promises to restructure the tax system but, because of political sensitivities, has not yet embraced full privatisation of public sector enterprises and has only partially reduced the funding demands it makes on banks. It plans reform of the financial sector for which, the economists say, "the need can hardly be over-emphasised".

in industry, the report notes that bureaucratic restrictions remain even though the government has swept away the need for official licensing of corporate decisions. "Statelevel restrictions continue largely in place and need to be removed if delicensing is to amount to much," the profesImports should be further liberalised and tariffs reduced and unified, although these measures should be balanced by new mechanisms to deal with dumping and "import surges".

To encourage foreign investment, India must join trade blocs and should accept a compromise with the US and other industrialised countries on intellectual property rules "Multinationals now treat the acceptance of such rules as an index of the seriousness of a country in attracting direct foreign investment," the econo-

mists say. Their most straightforward advice concerns the huge and inefficient public sector.

The government should promote competition and privatisation, it should start no new public sector enterprises except in cases of clearly established social need, and it should stop buying sick indus-

They note: "The lessons of unhappy experience with public sector enterprises in all sorts of countries with diverse social and cultural traditions suggest that it is extremely hard to make them function efficiently."

The professors recommend the complete and quick removal of subsidies on fertiliser, irrigation and electricity. as well as of subsidised interest rates for farm credits which, they say, mainly help farmers who are not poor. Instead, they advocate the establishment of institutions such as Grameen Bank, which has been successful in making loans to small farmers in Bangladesh.

Government schemes which help the poor should be better targeted, the report adds.

Pledge over Taiwanese rail link

TAIWAN officials at the weekend reaffirmed the government's determination to build a US\$17bn (£11.3bn) high-speed railway despite a vote in parliament on Friday to cut the project's budget for the fiscal year which began on July 1, writes Dennis Engbarth in Taipei.

Legislators voted 58-49 in favour of cutting all NT\$9.44bn (£237m) in central fiscal year 1994. The proposed 345km railway would cut transit time from Taipei to Kaoshiung to less than two hours. from more than four hours

UN in fresh talks on Iraqi missiles

By Mark Nicholson in Amman

TALKS in Baghdad between a senior United Nations envoy and Iraqi officials went into a fourth round last night with no signs of a breakthrough over UN demands for monitoring of two missile testing sites. Neither Mr Rolf Ekeus, head

of the UN special commission into Iraq's weapons of mass destruction, nor Mr Tariq Aziz. Iraq's deputy prime minister, due to meet again last night.

The talks were unexpectedly the foreign ministry official who returned late last week from heading an Iraqi delegation to the UN in New York, where negotiations were being held on allowing a limited exception to the post-Gulf war ban on the country's oil sales. Mr Ekeus said he could draw no particular conclusion from

Mr al-Qaysi's attendance. But the official's inclusion marks the first time Iraq has directly linked the two UN negotiations and suggests Iraq is seeking a broader understanding rather missiles stand-off.

The oil talks were suspended at Mr al-Qaysi's request. But UN diplomats suggested the two sides had produced a draft text of an agreement.

Divining the motives for US Japan-bashing

the principal Somali warlord.

THE NEW Japanese government, summit of industrial country leaders, was whenever it finally emerges, had better only the first round. US negotiators want prepare for battle. Friday's news that Japan's trade surplus was nearly a fifth higher in the first half of this year, compared with the same period a year ago, will only strengthen the resolve of US administration officials who want to see

quantitive targets added to the wordy text of the recent bilateral trade agreement. Japanese bureaucrats at the Ministry of Finance strongly deny that there is any further ground to give, especially on targets for imports in the particular indus-trial sectors listed in the agreement, arguing that anything more specific would quickly lead to pressure for bilateral, managed trade. The agreement currently commits Japan to "actively pursue" demand-led growth, which is "intended to achieve over the medium term a highly significant decrease in the current account surplus". Now, they say, let us get on with it."

But senior US officials say the agreement, reached with a lame-duck Japanese prime minister at the end of the recent to be able to measure the extent to which Japan is taking active steps to expand domestic demand and reduce trade restrictions by monitoring quantitive targets for the current account surplus and the share

of imports in gross domestic product. Only now, with the Japanese election result declared and the new government in the process of taking shape, might the true US motives become apparent. The kind of agreement that emerges from the next round of negotiation should reveal whether the US is really attempting to use its bilateral clout to open up the Japanese market to exports from all countries, as it claims, or whether it wants to target the performance of US exports to Japan, perhans even at a sectoral level, in order to increase the slice its exporters take from a

larger Japanese import cake. The official US line is the former. Much of the evidence does appear to suggest that Japanese markets are still relatively

per cent of gross domestic product, less than half the ratio in the US, Germany and Britain as well as Canada. Developing country exports account for only 1.8 per cent of total Japanese consumption of manufactures, compared to 2,9 per cent in the EC and 4.1 per cent in the US. So if quantitive targets can be employed to stop what Washington alleges is Japanese trade management through implicit import barriers and instead stimulate domestic demand to suck in imports and reduce the current account surplus, the gains will be

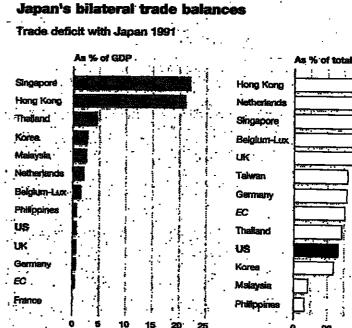

felt multilaterally.

Yet, if the US administration's motives are really multilateral and free-trade spirited, why has it chosen to pursue the matter bilaterally rather than multilaterally? For if the Japanese trade surplus really does reduce employment in other countries by reducing their exports, the evidence does not suggests that it is the US which loses the most.

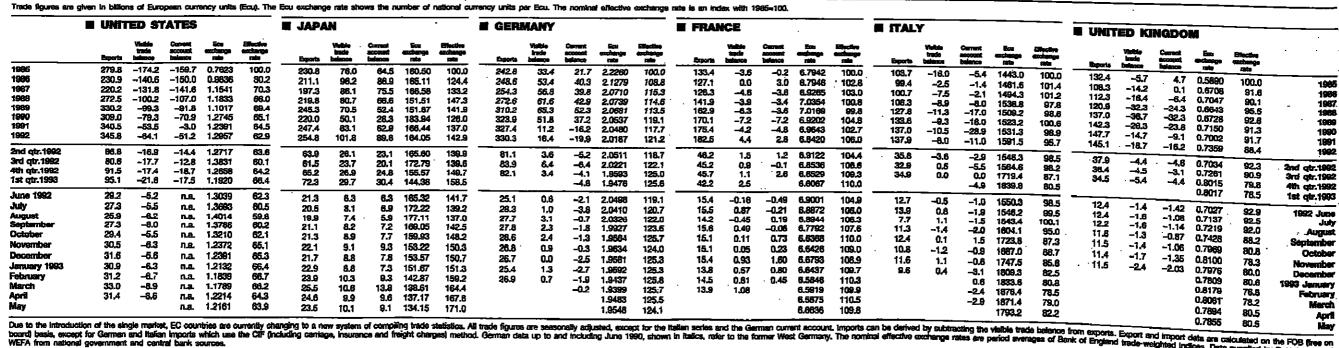

The US may have the largest absolute trade deficit with Japan, measured in dol-lars. But when the size of the deficit is measured relative to GDP or total trade with Japan, the US barely makes the top ten, as the charts show. Eight countries plus the EC have a larger bilateral deficit than the US relative to their total trade with Japan. Hong Kong's deficit is three times as large relative to total trade than the American deficit. Relative to GDP, the US deficit fades into insignificance compared to Hong Kong and Singapore. The US deficit with Japan is equal to 0.7 per cent of GDP in 1991, while Singapore had a

deficit equal to 22 per cent of GDP. Indeed the top five deficit countries Singapore, Hong Kong, Thailand, South Korea and Malaysia – all had much larger bilateral deficits with Japan and also, compared with the US, posted far faster growth rates of both GDP and exports and far lower unemployment rates. All of which must put a large question-mark over US and EC claims that it is Japan's trade surplus which is to blame for their multiple domestic economic problems.

hour's discussion. Both were joined by Mr Riyadh al-Qaysi.

closed: imports are equivalent to just 3.2 Edward Balls INTERNATIONAL ECONOMIC INDICATORS: BALANCE OF PAYMENTS

North American interest in issue contributes to personal UK investors' allocation being scaled back

Strong institutional demand for BT shares

By Roland Rudd

sts

institutional investors, particu-larly in North America, has meant that personal investors in the UK have been allocated fewer British Telecom shares than in the government's pre-

Institutional investors have been allocated 40 per cent of the £5bn BT3 offer - 7 per cent

more than in 1991 - after bldding for 2.9bn shares. North STRONG DEMAND from America accounted for 27 per cent of the international offer and was allocated 20 per cent against 17 per cent last time. The price of the interna-

tional offer was set yesterday at 420p, 12p above BT's closing price on Friday of 408p. The 12p above the market price is considered to be the time value associated with paying in three instalments. world's financial markets". A senior official from the UK Treasury said it was the first time that the government had ever sold shares in a company at its effective market price.

Mr Stephen Dorrell, financial secretary to the Treasury, attributed the success of 1.7bn in 1991. the sale to the structure of the bookbuilding exercise and the "strengths of the UK financial houses in the

The UK public offer - which is set at 10p discount to the international offer price - was allocated 60 per cent of the 1.2bn shares on offer. Individual shareholders applied for only 1bn shares compared with

More than 95 per cent of applicants in the UK public offer will receive an allocation and more than half will get all

they applied for. However, non-BT shareholders who applied for more than 700 shares through the Share Information Office or more than 1,500 through a share shop will

not receive anything. UK institutions accounted for just 46 per cent of hids in the international offer. They have been allocated an extra 2 per cent, partly because they are thought less likely to sell

their shares in the aftermarket than overseas investors.

SG Warburg, the govern ment's global co-ordinator, said it could exercise a "Green Shoe" option - or stabilisation provision - by buying an additional 91.5m shares, or 7.5 per cent of the L2bn shares for up to 30 days.

Lex, Page 14 Who gets what, Page 16

cent of businesses expected the next move in interest rates would be up, while 49 per cent said they would come down. The survey, conducted last month, comes after comments

from some economists that inflation is dead. "There is very little evidence that directors believe that inflation is being brought under control once and for all," the survey says. Only 7 per cent expected retail price inflation to be less than 2 per cent by next June.

While many businesses are relaxed about the prospects of high import costs forcing up inflation, the survey focuses on worries that prices throughout the economy will shift up

anticipating one in January. National Savings contributed £220m to government

during the next pay round.

This is partly due to the repercussions of the long period in which private-sector wage settlements have been kept low, while a 1.5 per cent ceiling has been enforced on pay rises for government employees. Over the next six months, 38 per cent of companies expect to give a pay rise, with a further 16 per cent

facturing sector", according to Mr Ian Shepherdson, an economist at Midland. The study underlines concerns in the City that Britain's large deficit on manufactured goods will increase as the economy expands. That might put a brake on overall economic growth, possibly because a large deficit could weaken sterling and so lead to inflationary pressures and higher interest

> Writing in Midland's weekly circular, Mr Shepherdson says net investment by manufacturing in the 1980s was low even by the standards of the 1970s generally reckoned to have been a dire era for the sector.

'recovery at risk'

£26bn in the 1970s. Mr Shepherdson says that in other areas - such as in rising output per employee and a good record in attracting over seas investment - UK manu-facturing performed well in the 1980s. However, the promised overall benefits from such trends "have been slow in appearing". The study warns:
"Rebuilding the manufacturing

sector could take a decade." Stronger business confidence and a growth in the service industry in the second quarter of the year has boosted hopes of economic recovery in London, according to a survey by the London Chamber of Commerce and Industry. Nearly half of service companies said business had improved in recent months. while only 15 per cent said sales had gone down.

Deals agreed | Heath urges on African Leyland Daf subsidiaries

By John Griffiths

RECEIVERS FOR the former Anglo-Dutch truck maker Leyland Daf said at the weekend they had reached agreement on the future of the six African assembly, ser-vice and distribution subsid-

Mr John Talbot and Mr Murdoch McKillop, the joint Arthur Andersen receivers. said the new local owners would continue trading in Leyland Daf vehicles, as they have done throughout the receiver-

ship.
The receivers would provide no precise details of the new ownership arrangements, which in most cases are expected to involve some state interests. The six subsidiaries are in Ghana, Zambia, Malawi, Tanzania, Uganda and Zim-

The companies have been operating on a small scale, with combined sales believed to have been about 500 trucks last year, and the companies' sale is only expected to raise between £5m and £10m for the

The African deal means that only the future of Multipart, the parts warehousing and dis-tribution business in Chorley, Lancashire, has still to be

Leyland Trucks, the Lancashire-based manufacturing company now owned and operated by a management buy-out team, believes it can start working more closely with the African operations to expand produc-

tion and sales. "We are now involved in discussions with the new owners of these businesses concerning our future working relationship," Mr Stuart Heys, Leytor, said yesterday.

talks with political wing of IRA

By David Owen

THE GOVERNMENT should consider holding talks with Sinn Fein, the IRA's political wing, Sir Edward Heath said yesterday, describing such a step as "a sensible thing to do" when the time was right.

The former prime minister told BBC Radio 4's The World This Weekend: "When the moment is right, I have no objection to them telling Sinn Fein exactly what the government's position is and trying to influence them to have much greater influence over their military counterpart, the IRA and get them to pack it all in."

He said: "I do not object to

people having talks with other

political people. During my government, Lord Whitelaw had direct talks with the IRA.' Sir Edward also criticised Mr John Major, the British prime minister, for attacking Mrs Mary Robinson, the Irish president, over her recent meeting with Sinn Fein. He "regretted" the fact that Mr Major got "rather annoyed" that Mrs

Robinson met the Sinn Fein leader. "There was nothing to be gained from doing that because obviously the presi-dent of the Republic could not accept a rebuke." Sir Edward said he would

keep Dr lan Paisley, the Democrat Unionist leader, out of any discussions on the province's future, as he did from the 1974 Sunningdale talks. He urged Mr Major to appoint a senior member of the Cabinet with sole responsibility for dealing with terrorism.

"We have had nearly 25 vears of terrorism in part of the United Kingdom. We have seen recently it is much more active on the mainland. We cannot go on regarding terrorism as a permanent feature of our life in these islands."

Warning over Japanese-style work practices

By Diane Summers, Labour Staff

PENT-UP resentment from British workers over the imposition of Japanese-style working practices could have a "devastating effect" on indus-try as the recovery continues, says a report commissioned by the government.

The review of the influence of Japanese companies on UK labour practices, to be published tomorrow, finds "little evidence that Japanese-style international competitiveness can be achieved in Britain by copying some, or even most, Japanese working methods". It also raises questions about

the effect of having to "work as

hard as humanly possible" on the quality of employees' lives. The study, conducted for the Department of Employment by Industrial Relations Services, an independent pay and conditions research group, says British manufacturers are using the threat of Japanese competition to push through reforms in working practices. These include increased flexibility in the tasks workers must under-

sibility for factory floor workers and reductions in waste. The report's author, Ms Sue Milsome, says this tack has proved more persuasive than the more accurate "but less compelling" argument that "competitive pressures demand changes in working and management practices". Labour law reforms and the recession have probably had more influence on British working methods than the example of com-

take, greater individual respon-

panjes like Nissan, she says. A "threat" from German competitors was used in a similar way a few years ago.Ms Milsome says: "This tactic has in fact proved successful in convincing British trade unions to co-operate in reforming work-

The report, however, warns that the introduction of some working methods favoured by Japanese companies could increase British industry's vulnerability. For example, "justin-time" production means companies do not keep buffer stocks. A sudden stoppage by workers could mean immediate lay-offs in other plants, as happened in the 1988 Ford strike.

It warns: "If there is a great deal of pent-up resentment against Japanese style working practices, and the fragility of production systems has been increased ... worker dissatis-faction leading to industrial action could have a devastating effect."

The study points to the debate in Japan over karoshi – death through overwork. Karo-shi, it says, is mainly as a result of large amounts of unpaid overtime by Japanese workers. This overtime "needs to be borne in mind when considering measures of Japanese

labour productivity".

It concludes that the Japanese economic miracle, which has so impressed western observers, is probably coming to an end. "It may be that Japan's employment practices, in particular, will be jettisoned as Japan becomes a mature economy, so British employers should be wary of imitating practices that are only appropriate in a climate of ever-increasing growth."

Two years ago, the annual conference of the Trades Union Congress voted against "alien" practices, citing examples from Japanese companies in Britain, in particular the holding of "beauty contests" between unions and the selection by employers of single unions to represent all workers. Since 1991, however, the two largest unions to support that - the MSF and TGWU general unions - have themselves signed single union deals.

Directors predict big rise in inflation

over the next year as the cur-rent period of wage restraint comes to a halt, according to a survey by the Institute of Directors published yesterday. With only 52 per cent of companies saving they have given increase in the past 12 months,

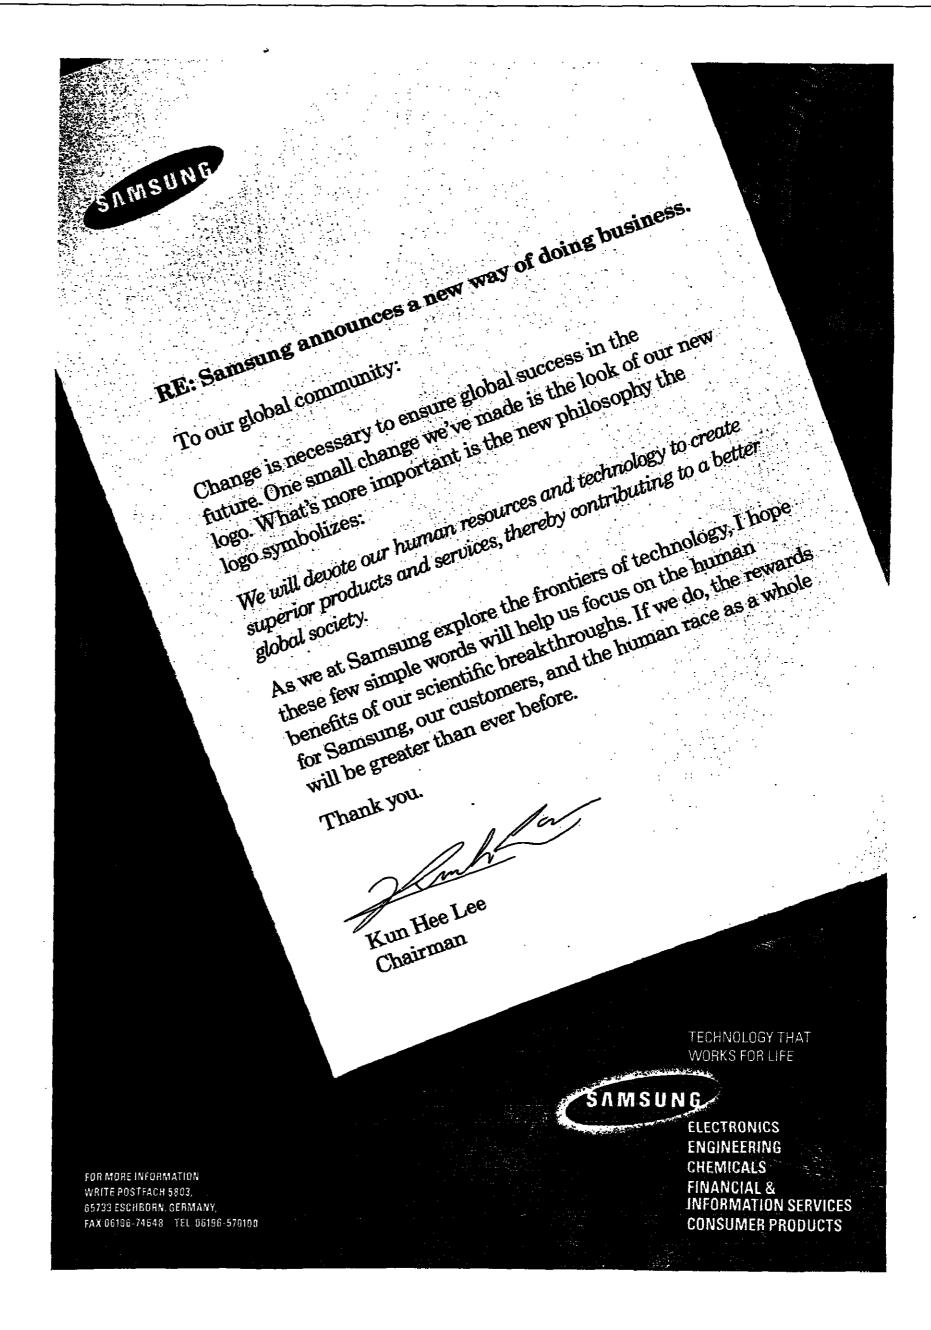

A BIG rise in Inflation is likely

their employees a wage many businesses believe they will be forced to bow to demands for higher pay as the economy recovers. There is also scepticism that the government will stick to its policy of keeping down wage rises among its own employee More than a third of the 337

think the year-on-year increase in the retail prices index will rise above 4 per cent by next June. In the year to last month it was 1.2 per cent, the lowest for nearly 30 years. The response implies that the Treasury may have problems keeping its measure of underlying inflation - the RPI excluding mortgage payments - under its

4 per cent target. In a surprising result, 86 per cent of companies in the survey said the current level of interest rates, held at 6 per cent since January, was "not hindering" their businesses. Underlining general economic uncertainties, 45 per

funding in June, although £195m of that was due to accrued interest. Net sales were just £25m, with gross sales of £604m offset by repayments of £579m.

British Railways Board is considering the sale of its quarry subsidiary Meldon Quarry Limited

Meldon Quarry, situated in Devon, has estimated reserves of 100 million tonnes. The quarry has traditionally operated as a supplier of track ballast to the British Railways Board. Recently the product range has been expanded to include chippings and other stone products for sale in the local market.

Any party interested in this acquisition opportunity should contact Mr A. D. E. Gardner: Lazard Brothers & Co., Limited, 21 Moorfields, London EC2P 2HT. Telephone 071-588 2721 Fax 071-628 2485.

This advertisement is issued by British Railways Board and has been approved by Lazard Brothers & Co., Limited for the purposes of section 57 of the Financial Services Act 1986. Lazard Brothers & Co., Limited is a member of SFA.

PEOPLE

Geologist and engineer come on board

N M Rothschild is expanding its small coterie of managing directors from four to six, promoting two men who could not be less like the stereotype merchant banker a geologist and a mechanical engineer and neither educated at Oxbridge.

Welshman Keith Palmer, 45, the grandson of a miner, is the bank's natural resources expert, and has been responsible for building up Rothschild's corporate and project finance business in the energy, mining and utilities sectors, both in the UK and abroad. Currently looking after the British Coal mandate. Palmer (right) has also brought in plenty of overseas business; last year the UK merchant bank was financial adviser on Argentina's \$3.99bn Gas del Estado deal, which was the largest energy privatisation outside

Before joining Rothschild's in 1984, Palmer, who took a degree in geology from

Birmingham University, had spent four years in the energy department of the World Bank. Earlier experience included a year with the IMF, two years in Tanzania and four years with the finance ministry in Papua New Guinea. He works within the corporate finance department; the divisional head Russell Edey, is already a managing director.

Meanwhile, John Bishop, the 39-year-old in charge of treasury and bullion, is a mechanical engineer from University College, London. He spent two years with Babcock & Wilcox before joining Rothschilds in 1977, where he has spent his entire career on the treasury side.

Treasury was the only division not represented at managing director level. The other mds are Tony Alt, heading up the capital markets side, Bernard Myers in charge of international and David Sullivan running the banking division.

2---

.

The bank denies that this round of promotions holds any wider significance in terms of flagging an heir apparent. "There are plenty of family members around." says a spokesman, referring to David de Rothschild, deputy chairman under Sir Evelyn de Rothschild, and Amschel Rothschild, recently elevated to executive chairman of Rothschild Asset Management

Non-executive directors

■ Sir Keith Bright, chairman of Electrocomponents and Brent Walker and a former chief executive of London Transport Executive, and Keith Mackrell, Shell's retired regional co-ordinator for the Far East and Australasia, at FAIREY GROUP.

Michaelson moves from MAM

of Mercury Asset Management took another turn last week with the announcement that Bob Michaelson, a director of the group and chairman of its North American subsidiary Warburg Investment Management International, is joining Citibank Global Asset Management at the end of August.

In the past 18 months MAM, which once had a formidable reputation for holding on to its staff, has lost star fund manager Leonard Licht, as well as two other main board directors Richard Bernays and James

Dawnay. Neville Bowen, chief execu-tive of Citibank Global Asset Management, says the attraction for Michaelson was the international nature of his

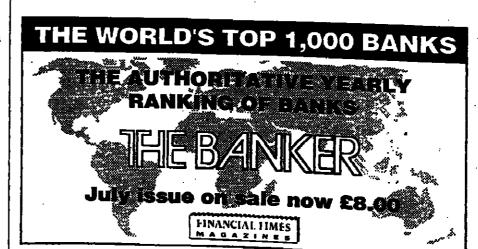

operation. Based in London. Citi's new unit, created early last year, manages \$68bn in assets, mostly for non-UK clients, via 26 investment teams around the world. Mercury, by contrast, is a much more domestic operation. "He has been concerned with international markets all his life," says Bowen.

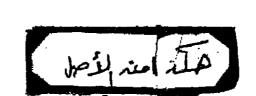

Michaelson, 46, joins in the newly created role of global chief investment officer. Bowen says he, together with a number of colleagues, had been determining overall investment policy up to now. "I am an investment person and so that was not a problem, but what has happened is that we have been growing so rapidly, we needed new resources." In his new job, Michaelson,

who will work from London, will be managing all the investment teams, determine global asset-allocation strategies, and also be in charge of some of the largest accounts.

Earlier in his career, Michaelson was a managing director of Putnam International Advisors in London; he had also worked for Putnam at its Boston headquarters from 1978-1981. Joining MAM in 1984, he spent three years in New York from 1987, returning to London in April 1990. In his current assignment he has been in charge of investments in continental Europe.

Tony Taylor, chairman and ceo of Leopold Joseph & Sons (Guernsey), has been appointed to the main board.

Figures should confirm recovery

THIS week should bring statistical confirmation that the UK economic recovery is progressing well, while industrial production in France and Italy continues to fall. Provisional GDP figures on

Friday are expected to show that British economy grew at an annual rate of about 1.5 per cent in the three months from March to the end of June. Analysts have been steadily upgrading their forecasts for GDP this year, with the Treasury's latest survey of independent economists indicating real growth of 1.6 per cent in 1993 and 2.6 per cent next year.

Although official figures give only a partial insight into the UK's trading performance (the June figures for trade with non-EC countries are out on Wednesday), all the signs are that Britain is experiencing a well balanced recovery.

Figures last week showed manufacturing output growing strongly, led by investment goods production. At the same time, unemployment has fallen further while inflationary pressures are subdued.

This week's figures are expected to confirm that consumer demand continues to grow modestly, with only a gradual pick-up of bank and building society lending. Such a recovery may not win many votes - in fact it may almost

go unnoticed by many people – but it offers the best chance of the UK enjoying a sustained upturn while gradually reducing its current account balance of payments deficit.

Mr Kenneth Clarke, the chancellor, should be able to give a generally upbeat assess-ment of UK economic developments when he appears for the first time before the Commons Treasury and Civil Service Committee on Wednesday afternoon.

On the following day, the Maastricht Treaty faces a formidable parliamentary hurdle in the UK when the Commons debates the social chapter and Labour amendments to government policy. Elsewhere, attention will be

focused on German money sup-ply. The Bundesbank is expected to announce the June data early in the week. If M3 growth lies within the 4.5 per cent to 6.5 per cent target range, it will encourage hopes of further interest rate cuts in Germany that could ease the strains in the European Monetary Sys-

The following are some of the week's economic highlights and events. The figures in brackets are the median of economists' forecasts from MMS International, a financial information company. Today: Germany, Mr KenUK Real GDP growth

neth Clarke, UK chancellor, visits the Bundesbank and speaks about UK competitive-ness in Munich. Japan, June money supply (M2 and CD up 1.3 per cent on year). Canada, May wage settlements (1 per cent). Sweden June unemployment (10 per cent).

Tomorrow: UK, June CBI distributive trade survey, building society commitments (£2.9bn), M4 (up 0.4 per cent on month, 3.9 per cent on year), M4 lending (£1.8bn). US, June housing starts (1.25m), building permits, Fed Chairman Alan Greenspan delivers Humphrey-Hawkins testimony to House Banking Committee. Japan, May leading diffusion index, coincident index. France, May industrial production (down 0.2 trade balance.

per cent). Canada, June construction wage index (down 0.1 per cent).

Wednesday: UK, June retail sales (up 0.3 per cent on month, 2.5 per cent on the year), trade with non-EC countries (£850m deficit). May construction orders. Thursday: UK, British cham-

bers of commerce quarterly business survey; provisional vehicle output. US, June Treasury budget (\$9bn surplus); money supply week ended July 12 (M2 \$4.7bn); initial claims week ended July 17 (337,000); Alan Greenspan gives Humphrey-Hawkins testimony to the Senate. Canada, May retail sales (up adjusted 0.2 per cent on month).

Friday: UK, preliminary second quarter GDP (up 0.5 per cent on quarter, 1.5 per cent on year). US, auto sales July 11 to 20 (6.8m). During the week: Germany,

June M3 from fourth quarter base (6.5 per cent), West Ger-man producer prices (flat on month, down 0.4 per cent on year). Italy, may industrial production (down 4.2 per cent on year); June M2 (up an annual 6.1 per cent), bank lending (up an annual 5 per cent); July consumer prices in cities (up 4.3 per cent on year). Japan, Bank of Japan quarterly eco-nomic outlook. Finland, June

RESULTS DUE

SmithKline expected to be 10% ahead

SmithKline Beecham, the Angio-American healthcare group, reports its second quarter results on Tuesday. Analysts are expecting a 10 per cent rise in pre-tax profits to £280m, excluding any

one-time exceptional items such as disposals to Wella and Sara Lee. The dividend is likely to be unchanged.

pharmaceuticals division and

Sales are expected to be up by about 25 per cent in the

Both figures will be assisted by currencies. Analysts will be looking for strong growth from Engerix-B, the hepatitis B vaccine, Seroxat, an anti-depressant, Kytril, an

anti-nausea treatment. Relafen, the non-steroidal anti-inflammatory for arthritis. and Augmentin, an anti-biotic. The latter may overtake SB's anti-ulcer treatment Tagamet as the company's most important drug.

reforms in Germany and Italy will be carefully monitored. as will the company's progress in the increasingly competitive US market.

Waste Management International is expected to report on Monday interim pre-tax profits of between £75m and £80m against £62.5m a year earlier.

The company, floated by its US parent Waste Management which retain majority control.

Brockhampton Hidge., Brockhampton Springs, West Street, Havant, Hants., 12.30

venture with Wessex Water in the UK and from expanding business in the Far East and Pacific Rim countries. Full year profits for the year

ending December are forecast at about £180m (£144m). First Technology, a maker of crash dummies and security equipment for the car industry, is forecast to turn in a big increase in pre-tax profits to

about £2m from (£0.6m) for

the year to April.

DUBAI

regional Communist Youth League nine years ago, Viktor Korovin incurred the wrath of Boris Yeltsin. His offence was to have sent his deputy to a meeting with the man who was then regional

Communist Party boss. As chief executive of newly-privatised Uralmash, Russia's biggest heavy engineering company, the 40-year-old Korovin still believes it is "to a leader's credit if he has a deputy who can replace bim".

Delegating responsibility is a key component of his strategy for overhauling a flagship of Stalin's indus-trialisation which last week celebrated its 60th anniversary in President Yeltsin's home-town of Yekaterinburg.

The managerial challenge of adjusting to the chaotic market reforms sweeping Russia are formidable. But if there is anyone capable of handling them, it is Korovin, who has already displayed shrewd and energetic leadership since tak-ing on the top job at Uralmash (Urals Heavy Machine-Building Factory) 14 months ago.

Korovin's self-deprecating manner and boyish - almost scrawny - appearance only thinly disguise a relentless workaholic.

Sitting in a spartan office over-looking the railway that crisscrosses the Uralmash factory, he says human challenges outweigh by far the severe problems of worn-out plant and equipment, financial crisis and government interference.

His workforce has been reduced from 38,000 to 29,000 since he took over, with 5,000 leaving of their own accord and 4,000 made redundant. The administrative staff have been put on a four-day week and the level of activity at the plant is a shadow of what it was under the old state planning system when, as he puts it, "demand for our products was artificially high". Further job cuts will "depend on our success in the market".

Since he was elected to run Uralmash in a contest with four other candidates, he has appointed like-minded men of his generation as directors for marketing, personnel, production and finance. He has given them full responsibility and freedom, dumping the highly-centralised system that continues to exist within most enterprises in the former Soviet Union.

"Russians are in no way inferior to Germans or Italians," says Korovin, who worked for an engineering company outside Frankfurt in 1990, and then headed Uralmash's joint venture with Austria's

"The only difference was that the economic framework in which peo-

Delegate and rule

In a new series on Euromanagers Viktor Korovin of Uralmash in Russia, talks to Leyla Boulton

Viktor Korovin: a relentless worksholic who leads from the front

ple have worked has been all wrong. My task is to change this, and then you can really expect mir-

acles from people." In an attempt to compensate mangers for pay that is demoralisingly low by comparison with the for-tunes being made by new entrepreneurs, options on 5 per cent of Ural-mash stock have been set aside for them. Korovin's salary, set when he was appointed at 5.6 times the prevailing average wage at Uralmash, is equivalent to \$200 (£134) a month.

In a move to improve shop-floor incentives, he plans to give the different sections of the under-used plant enough autonomy to take on additional contracts and use the profits as they wish "to re-equip, expand, or even increase wages"

Even though he claims not to enjoy it, he says the recipe for earning the respect of a workforce at large gatherings is to "talk very sharply, crudely, even shouting at times". Faced with constant strike threats over low pay, his reply has been "go ahead and strike, your pay will be even smaller".

To cope with theft of factory materials he has set up a security force to patrol the 5sq km plant. There is little else he can do when his low-paid workers have even managed to smuggle out copper through the plant's sewage system. Notwithstanding his enthusiasm

for delegation, Korovin is a man who is capable of leading from the

In his fight for new markets to replace dwindling state procurement orders, he last winter led a consortium of Russian companies which fought for and won a contract to supply mining and transport equipment to Russia's \$1bn Udokan copper development project. He is now looking to expand exports of mining equipment to China and is trying to latch on to a

Most factory managers in Russia jump at the chance to visit the US on a business trip. But Korovin has left Uralmash's finance director in charge of negotiations with the US groups Caterpillar and National Oil Well for a joint venture in the production and marketing of oil drilling equipment.

Rather than run to the government for wage and other subsidies, as some privatised companies are continuing to do, Korovin is pushing for the state to take on the financing of the cheap housing, kindergartens and other services that Uralmash provides. Korovin is desperate to shed these non-productive assets which he says amount to an invisible 30 per cent tax on profits. He has stopped building housing for workers, even though it has long been the tradition that staff receive their own apartment after 10 years

At the root of the efforts to keep down costs is a desperate desire to save jobs and avoid what he calls a "social explosion". As Kakha Bendukidze, a wealthy entrepreneur who bought 18.5 per cent of Uralmash shares says, there is a "need to stop unemployed workers from smashing up the plant".

Korovin says the government's biggest mistake is falling to create jobs and he criticises politicians for interfering with his new freedom. One example is the finance ministry instructions telling him to launch a capital increase. Korovin insists it should be his responsibility to decide the terms and the timing. even if the government still has 20 per cent of the equity.

Instead of trying to micro manag companies the government should get on with its job of removing market distortions.

There is demand for our equipment but the crisis is structural. Our customers - steel companies and coal enterprises, for example have capacity which must die. But they're trying to maintain everything and that's why we are not being paid."

Those customers that have money have insufficient incentives to reequip. "Stop piling up your money," is his sales pitch to them. "It's time to start buying equipment other-wise you're bad managers and any decent capitalist will wipe you out."

Motivated by the same ambition and energy which propelled him to the top of the old Communist system even though he now believes in a completely different ideology, he works 14 hours a day, six days a week. "I know that's bad," he says, as he chain-smokes his way through a packet of Mariboro cigarettes. "It's much better to be fresh for the next day. But all I have time for is to sleep a little and spend Sunday

eaders who try to achieve radical change in their organisations almost always face vilification at the outset. They are denounced with especial venom if most of their employees can see no external crisis, and so no great need for change. They are cursed to the rooftops if they try to enforce it by dictating new ways of working, rather than by first creating a broad and deep consensus on what

needs to be done. This phenomenon has plagued a string of tough-guy business leaders who have taken their organisations by the scruff of the neck over the past decade and tried to haul them screaming into the world of late 20th century management.

Consider, above all, Jack Welch of US General Electric. Since the late 1980s he has been recognised for what he is - one of the most effective transformational leaders of our age. Starting brutally in 1981, he yanked GE out of its illustrious, but over-confident past and turned it into one of the few large US corporations which has a decent global market share in many of its businesses.

Six years ago much of his organ-isation still spat blood at him. "Mad Jack" and "management by fear" were just two of the politer epithets about his style which ech-oed around GE – and outside it. But he then mended matters by showing he had learned the need to accompany "hard" change (or follow it) with "softer" measures to change the corporate culture.

These included several continu

ous education initiatives, and also highly participative "workout" programme of removing needless rules and work procedures. GE is now home to some very far-reaching employee "empowerment" suces. Other companies have learned from its experience, accelerating their change processes -and defusing early opposition - by introducing "hard" and "soft" initiatives in parallel.

If Welch has listened to US Public Service Broadcasting (PBS) over the past week, or perused the British press - which he does often he will feel some sympathy for an equally high profile UK chief executive who has now landed himself in a similar position, attracting complaints of "Stalinism".

But Welch's sympathy will be limited, because his counterpart is a less effective leader and his problems are partly self-made. The man in question is John

Birt, who seven months ago took over as director-general of Britain's nearest equivalent to PBS, the British Broadcasting Cor-For the benefit of readers who

A risky exercise at the BBC

Christopher Lorenz on John Birt's dilemma

are not fixated by the regular spate of storms at the BBC, a summary of Birt's situation is required. He is trying to achieve something far harder than the loosening-up exercise which Welch performed on an over-controlled GE: Birt has to create a tightly managed enterprise out of a loose, public-sector collection of fiefdoms which have thrived in creative terms for decades - but with manifest finan-

He is failing to apply property US and European experience of how to lead transformational change

cial waste - beneath an ineffective, committee-ridden bureaucracy.

Behind this attempted revolution lies Birt's twofold mission: to ensure that a traditionally hostile government is so struck by the RBC's sudden surge in cost-effectiveness that it renews its charter in 1996, together with its prime source of financing, a licence fee levied on every TV user, and to shore up the BBC's market share against an ever-rising flood of rival TV and radio stations.

Birt's prime method of change has been to force through the creation of an (over-fragmented) internal market through a procedure called "producer choice". This is an unfortunate term for what is, in effect, a cost control mechanism.

If Birt were to ask Welch for advice on his predicament, he would receive some tough-talking not about what he is trying to achieve, but about how. For Birt has made a series of mistakes which are fundamental to the (mis)management of change, Some spring from his uncommunicative and uninspiring public persona

an utter contrast with Welch and other successful "change masters" Other errors flow from the advice he has been given by some of the accountancy-based management consultancies on which he has relied to an excessive

extent. Most fundamentally, he is failing to apply properly modern US and European experience of how to lead transformational change. In the UK, all sorts of private and public sector organisations, from BP and ICI to hospitals schools and even a few local authorities, are achieving uncomfortable change by setting a top-down direction, and then stimulating the enthusiasm, participation and initiative of their staff. Birt did help spark a year-long consultation exercise before he took over, but it has

failed to create much consensus. Nowhere was this more evident last week than in a newspaper article by one of his top advisers, David Hatch, which reeked with language about "we" and "them" (as in "we will tell them. " and "their lack of uncertainty about our objectives" - my italics). It is hard to imagine a less effective way of preparing the ground for the sort of "ownership" or "buy-in" which any programme of change must create if it is to succeed.

That is done not by diktat and cursory "sheep dip" re-training for staff, but - as at BP - by co-opting change agents among existing employees at all levels, and inspiring rather than ordering them to enthuse their own colleagues in turn. For this to work, open debate must be encouraged; it can be discreetly "facilitated" and kept

vithin bounds. If all this has proved necessary to accomplish change in multinational machine bureaucracies, it is even more vital in a creative "know-how" organisation such as the BBC. Birt's apparent failure to recognise this so far - or to apply it effectively - has contributed heavily to the very poor state of staff morale which was all too evident in the employee attitudes survey published on Friday.

Birt and his advisers have also shown poor judgment on two other counts: his special personal salary arrangements, and those of other top staff; and last week's seeming shift of the BBC's business strategy away from Birt's initial upmarket focus - a shift he then

Some employees will always resist change. But for most to "buy-in" to it, they need faith in their leader as an individual and in his strategic vision.

Welch built both in spades. Birt's lack of them could yet be his

SIEMENS

Everyone's talking about mobile phones. We helped to invent them.

Mobile phones give you a new sense of freedom -a freedom which is only worth its cost if you can depend on your terminal equipment. Siemens mobile telephones, made by European experts in the mobile telephone field, set new standards - 12 network operators in 11 of the 18 European countries with mobile telephones have now decided in favor of Siemens digital GSM network technology. Our designs for the shape and function of mobile telephones and our development in network technology have been adopted worldwide.

Today, this lead in know-how is reflected in every Siemens terminal. It expresses itself in the range of functions and in convenience, reliability and service. There is a good reason why we have deveioped and manufactured vital modules of our mobile telephones ourselves - the Siemens mark on the outside is the guarantee of quality inside. With quality you can depend on, why settle for anything less? Not every digital telephone network in Europe is from Siemens but with a Siemens terminal you can be sure of achieving maximum convenience and reliability.

For example, the robust GSM portable or the compact GSM handheld with completely new user prompt functions.

For more information, please contact: Siemens AG, GSM-Info Center, Postfach 234 MB, FT D-90713 Furth, Germany

Siemens mobile telephones the ultimate choice.

REPUBLIC OF LEBANON MINISTRY OF HYDRAULIC AND ELECTRICAL RESOURCES COUNCIL FOR DEVELOPMENT AND RECONSTRUCTION

ANNOUNCEMENT FOR PRE-QUALIFICATION FOR THE

SUPPLY AND ERECTION OF TWO COMBINED CYCLE POWER GENERATING PLANTS

Within the framework of priorities of The National Programme for the Recovery of the Infrastructure, the Government of Lebanon, acting through the Ministry of Hydraulic and Electrical Resources invites applications from suitably qualified international power station contractors to pre-qualify to tender for the supply and execution on a turn-key basis, of two Combined Cycle Heavy Duty Power Generation Plants.

The two power stations will be erected at Zahrani in South Lebanon and Beddawi (I.P.C) in

The total generation capacity at each site will be around 415MW plus or minus 18%

The gas turbines at each site will operate at a first stage on Diesel-Oil, then at a second stage on Natural Gas.

The Turn-Key projects at each site will include:

- Engineering Studies with:
 - Site investigation
 - Civil engineering
 - Equipment
 - Fuel storage Environmental protection.
- Work planning The criteria which will allow the calculation of a cost estimate of the produced kwh using a given fuel, and the cost of converting the equipment to allow for the use of another fuel according to a programme to be fixed at a later date.
- The supply, shipping and commissioning of the complete combined cycle equipment in perfect operating order, including the necessary spare parts for a rational operation starting from the preliminary handing over date and extending for three years. The supply, shipping and commissioning of the high voltage sub-station equipment at
- 71kV and 220-150kV voltage. The necessary civil works for each site (sea water intake, plant foundation, administration buildings, warehouses, workshops, access and internal roads,
 - laboratories, boundary walls etc...). Training of personnel at each site.
- Operating and maintenance of the stations for a period of three years subject to

Only manufacturers of gas and steam turbines will be pre-qualified for this tender.

Pre-qualification applications must be on the basis of the pre-qualification document prepared by the Council for Development and Reconstruction, which will be available at the CDR offices against the sum of U.S.\$ Five Thousand (\$ 5000) effective Tuesday, July 20th, 1993 at the following address:

Council for Development and Reconstruction (CDR) Tailet El-Serail Beirut - Lebanon

Deadline for returning the duly completed pre-qualification document with all relevant supporting material is 12:00 noon (Beirut Local Time) on Monday 30/8/1993.

Architecture / Colin Amery

A castle fit to house a modern monarchy

ast week two related the furnishings and works of events occurred that art from these rooms would brought a bit of life to the architectural world. One was that Country Life, the magazine with a first-rate architectural editor in the shape of Mr Giles Worsley, announced the results of its competition for the rebuilding of parts of Windsor Castle damaged by fire.

Y 1121, V 19 1985

نام - ما راب

The other was also related to Windsor Castle, the appearance of a book Windsor, the Most Romantic Castle by Mark Gironard, which contains a chapter devoted to new ideas for rebuilding the castle's burnt-out St George's Hall. Both sets of ideas form the basis of an exhibition at the Architecture Foundation in London, which it is hoped will then travel to all parts of the

When the smoke finally blew away from the charred ruins of the castle after the fire last November, crowds of the curious and the impertment came forward with their views on what should be done. In fact, the damage was not as bad as had been thought. Only the north-east corner of the Upper Ward was affected. But it was a part of the castle that con-

tains several important rooms. The fire began in the private chapel and attacked St George's Hall, the Grand Reception Room, the Octagon Room in the Brunswick Tower, the Dining Room, Crimson and Green Drawings Rooms and the Great Kitchen. It spread with sickening speed through the roofs of these rooms, but, although it damaged the walls, they are not beyond repair. By a stroke of good fortune, the furnishings of these rooms had been removed for a rewiring programme and it all survives.

The survival of almost all

seem to make it sensible speedily to rebuild the castle exactly as it was in before the fire.

But, naturally enough, there have been strange cries from architects calling for contem-porary contributions to the rebuilding. Mr Girouard's book and the competition entries from Country Life are part of a campaign to promote a debate which tries to relate the rebuilding of Windsor to the modernisation of the monarchy as an institution. Competitions should be

judged by their results, not simply by their good intentions. The 10 proposals for St George's Hall in the Girouard book come not only from architects, but also stage and light-ing designers. It is a strange list that seems to demonstrate how difficult it is for architects and designers to understand the purpose of state rooms, the role of history and the functions of the monarchy. The implication is that Wyatt Ville's work at Windsor was dull and there is little understanding of how the castle works when it is filled with the colour and glitter of, for example, a state banquet in St George's Hall or a procession

of Knights of the Garter. The sense of continuity is the essence of an hereditary monarchy and the wish of so many of these designers to "bring light colour and change" into the castle may be almost as destructive as the intrusion of the media. There should be an element of poetry about any scheme for what has been described as "the most romantic castle" and that is exactly what is missing from so many of the laboured designs in both competitions.

The idea of leaving the Great

Mr Rowan Moore, does have a certain Gothic romance, but also opts out of the architectural debate. More feasible is the plan by Roderick Gradidge to add a steeply pitched roof to the hall and redecorate in a rich, almost Puginesque manner. One entrant, Douglas Bin-nie, has combined his talents as an architect and a sculptor in his elaborately iconographic schemes, and his Country Life entry is one of the best pres-

Of the 10 Circuard schemes only two are remotely workable. One is Richard MacCormack's bronze and timber roof, inspired by but not imitative of the original Gothic roof of St George's Hail; and the other is by Michael Hopkins, who saw the decorative potential of the motif of the Garter Star.

There is, inevitably, a committee to discuss the restoration plans for the castle. A decision is already made to rebuild the chapel area in a contemporary way. This area, where the fire began, was a remodelling by Sir Hugh Casson of the 1842 chapel by Edward Blore. Whether a private chapel is needed at this point in the castle's history may be debatable.

The committee may decide to build a modern roof on St George's Hall and they would be foolish to overlook the wonderful timber designs of the Hungarian architect Imrie Macovecz. He designed one of the best pavilions ad Seville's Expo 92 and his work is remarkably original.

The committee will have the benefit of the experience of the National Trust who are currently rebuilding Uppark in Sussex after a disastrous fire. They will also take advice from

Continuity is the essence of an hereditary monarchy, so Windsor should be restored as it was. Queen Elizabeth, the Queen Mother, stands with the present Queen and Princess Margaret and corgi on the steps in the East Garden, July 1941, in an illustration from Mark Gironard's book

those responsible for the recent help of one or two good archiexcellent restoration of Hampton Court.

The real opportunity offered by Windsor is involve in the restoration the expertise of those responsible for the Royal Collection who made such a splendid job of the refurbishment of Frogmore in Windsor Great Park. With the gentle

tects, Windsor should be the appropriate panoply for the restored very much as it was. home of the head of state. Mark Girouard's agreeable

But Castle, by Mark Girouard, Hodhis selection of contemporary der & Stoughton, £20. architects and winners of Exhibition at the Architecture Foundation in Bury Street, St James's, London SW1, until Country Life competition demonstrate that the modern imagination cannot deal with either August 29th

London Promenade Concerts

Elektra

ig choral works have often opened the first night of the BBC Proms season, but this year the director, John Drummond, chose an opera. On Friday, we had a concert performance of Richard Strauss's *Elektra*, which left the stalwart BBC Singers to sit patiently for the better part of two hours before they got any-thing to sing. But the princi-pals need to be leather-lunged, inexhaustible; and on that score the international cast could not be faulted. Nor, really, on anything else

that mattered: any leading

opera house would be proud to

have such a team. If this was

not the most memorable Elektra you might hear, it was impressively strong and bal-anced. Andrew Davis, who has become a notable exponent of Strauss's more lyrical operas, conducted the BBC Symphony. in two or three places, one missed the vicious edge that can sharpen the horrific goings-on, and though Davis built the final catastrophe effectively, the gross, hysterical exuberance of Elektra's triumph-dance was a trifle tame. On a lucky night, once the murders are accomplished the music can seem to hurl itself unstoppably forward into fatality; the Davis reading was too nicely controlled for that.

More attention to the "semistaging" would have been wise. Nobody was credited for it in the programme, and the singers seemed to have been left to improvise it, with some odd results. When Elektra should be scrabbling in the earth for the buried axe - not easy to do on a carpeted platform! - Marilyn Zschau seized the chance, understandably, to gulp some water: our heroine seemed to be pouring herself a stiff drink before getting on with the matricide. The Aegisthus, William Cochrane, walked slowly with a cane, and was still visible on the exit stairs when he

was meant to be in the throes of assassination.

Cochrane was nevertheless excellently tetchy and dignified. As Clytemnestra, his partner in guilt, Eva Randova wielded pungent, edgy tone -not a contralto bellow - to make the most of the Queen's darting slyness and baleful suspicions (and supplied bloodcurdling offstage death-cries). Much to her credit, she disdained any campy grotesque-ries. The first words of Willard White's bass-baritone Orestes administered one of the dramatic thrills of the evening: that doomy, implacable sound was perfect, and White sustained it up to his measured departure, murder-bent.

The central sisters. Miss Zschau and as Chrysothemis Deborah Voigt, were visually ill-matched: by rights young Chrysothemis should be vapidly pretty and sweet, and Elektra a haggard, unkempt witch, where Miss Voigt showed us a handsome matron and Miss Zschau a seductive gypsy with chic ringlets and a whole repertoire of balletic ges-

Still, for a concert performance such quibbles are unimportant. More to the point, Voight's Chrysothemis was gorgeously sung - impeccably musical, subtle with details, the voice glowing confidently to the end. Until the confrontation with the Queen, I thought Miss Zschau's hard-ish timbre might be too unvaried (and ber German consonants too biteless) to make a complete Elektra. With her feral vision of Orestes hunting Clytemnestra through the palace corridors. however, the portrayal took fire. The voice opened out excitingly; in all the rest of the opera, the wild veerings between joy and despair were splendid, and her dramatic pacing (except for that little drink)

David Murray

Avignon Festival

Adam and Eve in the Garden of Lenin

productions of this year's Avignon Festival, which continues until August 2, is a French version of Mikhail Bulgakov's play, Adam and Eve. It is performed in the courtyard of Sainte-Marthe Hospital by a company from Nancy Lorraine under their director, Charles Tordiman. The play was written in 1931 when Bulgakov, aged 40, supposedly still under the protection of Stalin, was having his work shelved by the various state theatre companies to which he was attached.

Commissioned as a play about a future war, Adam and Eve was never produced during the author's lifetime. Seeing it more than half a century later, one can understand why. The play predicts the complete collapse of the communist system and looks to an era when co-operation with the West and shared scientific knowledge is the only road to survival.

The piece begins conventionally enough in a communal apartment in Leningrad where a young engineer. Adam, is celebrating his marriage to

Eve, a foreign language student. Their honeymoon proves short-lived, as the apartment is invaded by a distraught professor of chemistry, who is fleeing from a young thug who has set upon him in the street. He turns up too, and is soon joined by a fighter-pilot, who is a dedicated communist, and by a

hack novelist. As they all quarrel angrily, it seems

as if we are in for a comedy about met in the first act remain alive, if not shared domestic space under communism, one of Bulgakov's favourite themes. But there is a more sinister undertone: the scientist is behaving very oddly, even for an absent-minded professor. He carries a curious-looking camera with which he photographs the married couple, enveloping them in a sinister green glow, and he mutters incoherently about the danger of poison gas causing universal disaster.

Puffing furiously at his cigarette, the French actor, Daniel Martin, captures brilliantly the attitude of a man forgetful of his present situation but deeply concerned about the long-term one. Hardly are the words out of his mouth, when what he has prophesised comes to pass. A wave of poison gas fumes shades of Chernobyl! - sweeps across the city, then the entire country, and everyone - well, almost everyone - is

This catastrophe is represented on stage by an instant change of scene in which the apartment building collapses and we are confronted by one of the main shopping streets, strewn with rubble and corpses, wreathed in smoke.

Luckily, Adam and Eve have survived to inhabit a world like that after Hiroshima, and so has the professor. His camera was really a secret weapon with which he could close up the cells of the body and make them impervious to the noxious gas.

Thanks to a series of fortunate accidents, all the other main characters we exactly well. From here, the piece becomes an exploration of the strategy of survival, well acted all round, the company seizing the comedy as well as the pathos.

I was reminded at times of Shaw and also of The Admirable Crichton, as the absent-minded professor turned into the strong man who keeps the group together and wins the love of the most earnest, feminist Eve (Aude Briant) during a sequence of stimulating discussions.

I would have been content to leave it there, with Eve replacing the professor's dog, who has been killed in the holocaust, as his love object, and the professor replacing Adam as hers - a conclusion prefiguring Bulgakov's major novel, The Master and the Margarita. But the director seemed to think that the work needed updating and encouraged the translator, Bernard Noel, who does a fine job in that role, to write an epilogue that was performed immediately after the author's text. Here, the maid, who died, is reincarnated as the professor's animal friend (an idea borrowed from Bulgakov's

satirical story, Heart of a Dog). This seemed an unnecessary extra course to the meal. Without it, the evening was complete and admirably adventurous, much in line with the general policy of Bernard Faivre d'Arcier. who has been reappointed as the Festival's artistic director in succession to Alain Crombecque.

D'Arcier believes that the Festival should take the initiative in promoting productions that extend the boundaries of theatre and dance as art-forms. In a period of tightening purse-strings for the Festival, he has set aside a fund of

FFr3m for this purpose.

Other efforts in this direction include a collaboration between a number of groups from all over the world, including Britain, under the heading Dark/ Noir. They are all to be seen in the Aubanel Gymnasium, where presentations at different levels of the building explore the world from the point of view of the sightless and the partially

As Michel Reilhac, the overall director of the project, explains, the audience is deprived of the tyranny of sight - blind people act as guides at one stage - in order that it may achieve a renewed mastery over its perceptions. Also running throughout the whole Festival is a tour de force in the Cloister of the Carmelites, by Philippe Caubert, who worked with Ariane Mnouchkine for a number of years, telling the story of his life in fictional form on stage as Le Roman d'un Acteur through improvised dialogue and exaggerated

Thus, in spite of a falling number of visitors, a wobbly franc and an aggressive mistral, the Avignon Festival still flourishes as it moves inexorably towards its 50th birthday.

Anthony Curtis 22-year-old, recently released

ILLY Roache made his name as a play-wright at London's Bush Theatre with a trilogy about his native Wexford. The Cavalcaders, commissioned by the Abbey Theatre for their small stage, The Peacock, is his first play to open in Ireland.

The Cavalcaders are a quartet of barber-shop singers who work together by day in a Wexford cobblers and perform in local bars by night, dressed in matching red dinner jackets. Roache's interest in memory is indicated before the play starts by his familiar device of filling the auditorium with vintage pop music, most signifi-cantly, the chorus "Can't Get Used to Losing You".

As the play opens, a glum figure in a raincoat, Terry, is handing over his shoe repair business to a younger man, Rory, who plans to modernise it. The set, by Frank Conway, is highly evocative: a battered Victorian cobbler's bench, massive old machinery, dirty coffee mugs and dusty, string-tied bundles of shoes dating back years. In these unlikely surroundings Terry relives the heyday of the quartet before the departure of the other two

members, Josie and Ted. Sudden changes of lighting (designed by Trevor Dawson) indicate leaps back in time. We see Terry at the age of 44 brutally ending his affair with Nuala, a warm and vulnerable

Dublin

from the "funny farm". He would be better suited to the more mature Breda, who drops in to listen to rehearsals, but he has never recovered from his wife running off with another man.

It takes some time to realise that Terry, easily the dullest of the four men, is actually the central character. Rory and Ted stick in the mind only as "the good looking blond one" and "the one who plays the piano". Rather unexpectedly, Ted runs off with Rory's wife in a sketchy sub-plot. However, all three are over-

shadowed by the fourth member of the quartet, Josie, a iaunty provincial corner-boy who dies young, presumably from cancer. Josie is played by Billy Roache, his thin angular frame, foxy face and receding hair giving credence to this quick-witted, tabloid-reading, pint-drinking chancer. But that Josie is so likeable and also "doomed" distracts from the central drama, which, unfortunately, is Terry's. His rejection of Nuala led, he

believes, to her suicide. But he is also mourning the disappearance of the community he knew as a child, when The Cavalcaders were the pride of the neighbourhood.

Nuala is played with heartaching naivety by Marie Mul-len, and Breda (who eventually ends up living with Terry) is given a sad dignity by Aisling O'Sullivan. But ultimately the women contribute little, as they are seen only as Terry's girlfriends.

For all the technical achievement of the writing, the play is disappointing, and oddly unsatisfying. Terry, a selfish emotional cripple, never grows or changes. There is little or no sense of the claustrophobia of the dead-end small town which electrified the Wexford trilogy. nor, apart from Josie, any truly memorable characters.
It is not often an author

unstages his own play, but Billy Roache has done it here. See it for his dazzling performance, but don't expect too much else.

Alannah Hopkin

■ City of Angels, the musical which was to close early on August 7, has won a reprieve and will continue at London's Prince of Wales Theatre.

Written by Cy Coleman and Larry Gelbart, it was enthusiastically reviewed when it opened in March. But it suffered from a lack of advance bookings and the early closure was announced last week. A surge of interest followed and Angels has been playing to packed houses.

This question is one of the central tasks facing the Goode Committee, which was set up by the government to review pension law following the Maxwell fraud and is due to report in the autumn. How the question is answered will have wide ramifications not only for people's pensions but also for their

Presently, control of schemes and their estimated £500bn in assets lies with employers. They decide contribution and benefit rates, appoint trustees, determine investment policy and retain the right to wind up schemes. Current and prospective pensioners - the "mem-- have little or no say over how schemes are run, despite saving large proportions of their income through

The debate on occupational pension reform has concentrated on devising measures to prevent fraud and compensate its victims. While this is essential, a bold reform would also transfer control of schemes to their members who would then elect trustees and vote on how schemes should be run. The case for doing so is strong.

At present, most schemes operate on a "final salary" basis – meaning members' pen sions are based on the size of their final salaries and the number of years worked for the company. Companies underwrite the schemes, topping them up when investment returns are bad and stopping contributions when performance is good.

Such a system would be suitable if people spent their whole working lives with a single company. But this is increas ingly rare, as people move jobs to develop their careers, take periods out of work to bring up children, lose their jobs through redundancy, switch to part-time work or are forced into early retirement. And, unless people remain as full-time employees with a singie company all their working lives, their pensions can be substantially reduced under

Democratic control of schemes by their members would lead to a more flexible and equitable way of determining the size of pensions, if only because employers would no longer be willing to underwrite schemes which they did not control. Instead of making variable contributions accord-

The best judges

Hugo Dixon argues that beneficiaries should control their pension schemes

ing to whether schemes were in surplus or deficit, companies would probably move to contributing fixed proportions of employees' salaries. As a result, pensions would be related to the size of individual contributions as is now the case with personal pension rather than schemes

Such a move would give members greater freedom to tailor their pensions to suit their individual circumstances For example, they would be able to vary contributions according to what they could

The case for transferring control of schemes to their members is strong

afford at different periods in their lives and to stay in schemes if they moved jobs, were made redundant or took career breaks.

Relating pensions to the size of contributions would also be fairer. Those who left companies before official retirement ages would no longer subsidise those who stayed the full course, in particular top executives whose pensions are sometimes artificially boosted by large salary increases immedi-

ately before retirement. A further advantage of transferring power to members would be to eliminate the conflict of interest between an employer's role as custodian of members' interests and its duty to promote shareholder

Conflicts do not only exist in extreme cases such as the Maxwell fraud. The wide discretion companies possess over managing schemes ensures there

Corporate Finance, the solidity

of a state bank and the lead-

ing role played by WestLB. On

are many legal ways of running schemes to enrich shareholders rather than the schemes' beneficiaries. Companies can, for example, claw back surpluses, use schemes to finance redundancy programmes or fail to increase

pensions in line with inflation. Transferring power to members would not end all conflicts of interest. For example, those nearing retirement might prefer low-risk investment strategies to be adopted, while younger members might want riskier but potentially more rewarding approaches. But at least such conflicts, currently decided behind closed doors, would be debated openly in a

more democratic system. Employers might even welcome a dilution of their control. Given that many are having to start making contributions again now that most pension fund surpluses have shrunk, companies might embrace the opportunity to limit their liabilities by moving to a system of fixed contrib-

But the pensions industry would resist transferring control of schemes to members. It would be quick to point out the uncertainties such a democratic revolution would introduce for employees. In particuwithout employers underwriting schemes, pensions could be at the mercy of day-to-day stock market fluctu-

Employers' willingness to cushion the effect of market fluctuations is an attractive feature of the current system. But employers' fears that transferring control to members would expose them to huge risks are alarmist. There are many ways of hedging, insuring and pooling risks, while financial markets are continually adept at devising

Strategies to limit risk would clearly not provide members with total protection in the event of extreme movements in financial markets. But it would be disingenuous to pretend that the current system provides members with copper bottomed guarantees either, as Maxwell pensioners know only

In any case, the argument for democratic control of pension schemes as with democratic reform in any field is not that it would eliminate risk. It is rather that people should be free to decide for themselves how their pensions should be managed because they are ultimately the best judges of what is in their

headline in Munich's Suddeutsche Zeitung said it clearly enough: Bavaria is selling its family silver.

Within a month of taking over as prime minister of Germany's prosperous and inde-pendent-minded "free state" of Bavaria, Mr Edmund Stoiber, a former state interior minister and law-and-order crusader in the ruling Christian Social Union, appears to be hell-bent on privatising his government's most profitable shareholdings.

Large strategic stakes in Bayernwerk, one of Germany's big three energy utilities, and Deutsche Aerospace (Dasa), the Daimler Benz aerospace subsidiary which contains what used to be Messerschmidt, are to be sold off. The state's onethird share in the Rhine-Main-Danube canal company is another candidate for disposal, along with a host of smaller holdings in areas such as

energy and waste disposal. Mr Stoiber hopes to raise DM2bn-DM3bn from the process. While other Länder, and the federal government itself, are merely muttering about a new phase of privatisation. Bavaria looks set to start.

The state premier also announced that all political privileges for government ministers and senior officials are to be abolished: everything ranging from free seats at the Bavarian state opera to salaries for lucrative seats on company supervisory boards, must in future be accounted for and, where necessary, repaid to state funds

It is the most radical step in Germany so far to counter the wave of public disquiet over endless petty scandals in ministerial offices. In recent months a string of leading poli-ticians have been forced to esign. The most recent was Mr Stoiber's predecessor, Mr Max Streibl, who admitted taking holidays at a business friend's expense.

Mr Stoiber's move also strikes at the heart of the cosy relationship enjoyed by business and the political establishment in Germany, and in Bavaria as much as anywhere. It is enough to make Mr Franz Josef Strauss, the father of Bavaria's postwar economic

revival, promoter and close patron of its defence and aerospace industry, and prime minister until he died in office in 1988, turn in his grave. Or perhaps it is precisely what he would have done. For Mr Stoiber is the man

who probably more than any other was Mr Strauss' closest Bavaria's radical new premier plans tough action to restore the state's fortunes, says Quentin Peel

In search of that old Strauss magic

confidant over his last decade in power. First as secretary-general of the CSU, then as head of the state chancery, and finally as minister of state in the prime minister's office, he was often the mouthpiece of his master in his negotiations with Bonn and the other fed-

Today he is attempting to bring a little bit of the Strauss magic back to Munich, where the sharp downturn in the German economy, the costs of unification and severe cuts in the federal government's defence budget are undermining Bavaria's own success story.

Worse still, for a politician, Mr Stolber's ruling CSU is in danger of losing its absolute majority in the state parliament in next year's elections. It faces an erosion of support both to the Social Democrats on the left, and to the far-rightwing Republicans. And it is facing up to the humiliating possibility that it might fail altogether to win any seats in the European Parliament, because its shrinking provincial base is not enough to guarantee it the minimum national vote of 5 per cent.

Germany faces no fewer than 19 European, national, state and local authority elections next year, and three concern Bavaria directly. Mr Stoiber believes they will be decided by two issues: the economy and internal security, including the highly-sensitive issue of immigration. On both issues he faces a big challenge.

Bavaria remains one of the wealthiest states in the federal republic, thanks to the range of modern industry which Mr Strauss successfully enticed, browbeat or simply bought with straight subsidies to come to his home state.

The defence industry has been as badly hit as any by the recent budget cuts and the economic downturn. Dasa alone has said it will lay off some 8.000 workers. But Mr Stoiber knows that the economic challenge is more profound.

What we have today is not a normal recession, but a structural recession which we

Stoiber: rejects 'state capitalism' and advocates privatisation

would have had to overcome even if there had not been unification," he says. "You have the same problems in Britain, France or Sweden. But we have the low-wage countries on our very doorstep. Mr Stoiber's answer is to

Franz Josef Strauss, the father of Bavaria's economic revival, would approve of Stoiber's motives

relaunch the drive to promote an indigenous high-tech industry, focused on small and medium-sized enterprises - Germany's famed Mittelstand. And that is precisely where he plans to put the funds he can raise from privatisation. "It is not just a question of our financial problems," he says. "It is a question of principle for me. We don't want state capitalism here. I am a great supporter of privatisation.

He recognises that the state's 58 per cent stake in Bayernwerk played an important role in Bavaria's economic success. For the Bavarian government ensured that electricity supplies were switched steadily from reliance on expensive coal from the northern Ruhr, to first oil and now nuclear power. With two-thirds of its power from that source. Bavaria now has the cheapest elec-

The change is that the European energy market is opening up, and other producers, such as France, are offering cheap supplies. "It is no longer necessary to have a state energy policy operated through one's own energy company," Mr Stoiber says. He may be a bit disingenuous. The plan is gradually to

merge Bayernwerk with Viag. the Bonn-based conglomerate which is already a minority shareholder. In return, Mr Stoiber expects Viag to move to Munich. And for the time being, the state will retain its

25.1 per cent stake in Vlag. Privatisation is only one radical answer to the problems of Bavaria and the CSU. The latest polls show the ruling party languishing on about 43 per cent of popular support - down almost 12 percentage points on the 1990 election - with the SPD, the real challengers, up

to almost 33 per cent. Yet the Republicans, on the far right, are the real threat to the CSU's traditional conservative heartland. They are both anti-immigration and anti-EC. The former is one clear reason why the party opted for Mr Stoiber over the more middle-of-the-road Mr Theo Waigel, the finance minister in

Bonn and party leader. The Bavarian premier certainly does not mince his words on questions of immigration. "We are not an immigration country," he insists. That would result in a multicultural society. And a multicultural society would be a ter-

rible thing."

And yet he is not a fanatical nationalist. Like Mr Strauss. he is a convinced European although he believes the Maastricht agenda for a single cor-rency is far too optimistic:

"Economic and monetary union will not come about this century," he says. "The convergence criteria are the main barrier, and they must not be changed. In the foreseeable future, no member state will be able to meet them.

In some ways, Mr Stoiber sounds almost like a sceptical UK conservative. He is a critic excessive Brussels decisionmaking and believes the EC should go slow on institutional integration, and concentrate on enlargement.

Mr Stoiber says the Republicans have lost much of their grounds for criticism with the tougher restrictions on asylumseekers, which came into effect on July 1. He played a big part in drafting the measures in Bonn, as state Bavaria's interior minister.

Yet perhaps the greatest threat he sees to all the traditional political parties is the growing public apathy and alienation from the political process. That is why he has seized the political initiative so swiftly, both on privatisation and privilege. Even if he is selling off the family silver, Mr Strauss would probably have

The real role of the trade association

ing not worth a button", July 15), Andrew Taylor puts a very persuasive case for Britain's 2,000-plus trade associations to modernise and become more effective in both the lobbying process and in the range of services they provide to their members.

The gist of a speech by Mr Michael Heseltine, the president of the board of trade, about trade associations to the Confederation of British Industry in June was that, from a DTI standpoint, too many associations are narrowly focused, poorly resourced and illequipped to help the industries they represent become competitive. He therefore specifically welcomed developments in the chemicals and electronics sectors, where there have recently been a number of trade association mergers, as examples of what should be happening more widely across industry.

It is certainly our experience in the Electronic Engineering Association that there is a "critical mass" below which it is impossible for a trade association to provide sufficient resources to maintain effective contacts with government. Brussels and the many other national and international agencies which today affect the business environment in which member companies operate We therefore strongly support Mr Heseltine's call for the development of a single, well- ledge from specialist groups is

The EEA itself is the result of a number of mergers. It will enlarge again by joining the Electronic Components Industry Federation to form a new Federation of the Electronics Industry on January 1 1994. The FEI will have more than 300 member companies and provide a powerful focus for telecommunications, information technology, defence electronics, business equipment, office products and electronic components elements of the electronics industry. Robert Cook.

director-general. EEA. Russell Square House 10-12 Russell Square,

From Mr Barry Higgs. Sir, Andrew Taylor draws attention to the large number of trade associations and the intention of the president of the board of trade to limit the

number with which his department has contact. Some reduction might be appropriate, but we should bear in mind that it is the member companies of these associations which pay the bills and decide what they need in their dealings with UK government departments. Most up-coming legislation emanates from Brussels in any case and, in today's complex environment, expert know-

From Mr Robert Cook.

Sir, In his excellent article on trade association to trade associations ("Lobby-industry."

resourced trade association to wealth-makers in our society lish focused programmes operance are not to be disadvantaged. Larger, more generalist, associations such as the Con-

federation of British Industry have an important role in influencing the general business climate. Similarly, the Chemical Industries Association represents its manufacturers in respect of their processes and practices. This leaves the sectoral associations to promote the interests of the particular product groups.

It would be a pity if the DTT's work for British industry was to be inhibited by a doctrinal Barry Higgs,

director-general, The Fertiliser Manufacturers Association_ Greenhill House

Thorpe Wood, Peterborough PE3 6GF From Dr Michael G Burcher.

Sir. The principal role of a trade organisation is to do those things which member companies believe is most ben-eficial to their industry. It is not necessarily to lobby gov-ernment on legislation and likely changes of policy. And size does not necessarily

equate with effectiveness.
The Galvanizers Association meets the DTTs criteria for a "lead association" and the DTI acknowledges this to be so. But four years ago the association separated from an existing confederation and established a clear and separate identity. We | Sutton Coldfield B72 1SY

qualified and properly paid staff. Industry participants, including suppliers, have com-mitted substantial financial resources to a range of programmes in which marketing and technical support to the market-place predominate. When we deal with the UK government we seek constructive dialogue; when we deal with the European Commission we act with our EC counterpart organisations through established channels in Brus-

An aspect of Mr Heseltine's speech which was less well reported was his announcement of a benchmarking challenge, in which industry asso-ciations will operate "benchmarking clubs" to help businesses improve competi-

If the same principles were applied to industry associations we would see the emergence of powerful, well-resourced and fully-effective organisations with improved quality of lobbying in Whitehall and Brussels. This is just what Mr Heseltine wants. Such groups would also command stronger industry support because they would provide better value to the subscription

A Nobel prize for Bhagwati

Sir, Samuel Brittan believes that neither academic macroeconomists nor economic commentators have been at the

forefront of the trade debate ("Trade and macroeconomics", July 12). He need look no further than the FT's own pages to see that

Prof Jagdish Bhagwati has been the most lucid, largonfree and easy to understand academic that one could possibly hope to read. Prof Bhagwati was even adviser to Arthur Dunkel, the recently-departed head of the General Agreement on Tariffs and

Indeed, such is his patience and commitment over the vears that the so-called free trade exceptions outlined by Prof Paul Krugman and others have been consistently shown to be a re-hash of the same old protectionist arguments.

Prof Bhagwati deserves a Nobel prize for patience for being there when needed to knock fatuous protectionist arguments on their head. He also deserves the Nobel prize for economics for his many years of clear thinking.

in need of this award, given the knife-edge which we are currently on in the Gatt negotiations. Onésimo Alvarez-Moro

The free trade area is badly

Ponteios, 2, 2 Puerta 6 28012 Madrid,

Price for water must be paid From Dr A R T Kemasang.

Sir, You leader, "The value of clean water" (July 14), is both one-sided and myopic. It is one-sided for looking at the question of value in strictly limited financial terms. Although the FT is a financial paper, it is still taking too much liberty in assuming that all of its readers are no more than financial zombies. To some, probably many, ques-tions of "cost" and "price" are woefully one-dimensional. They also pale into insignificance when addressed in context - ie, without ignoring such questions as our health and that of future genera-

It is myopic for missing the opportunity to put the priori-

tions.

ties right. The "huge sums involved" in bringing our water up to par with the rest of the EC is surely the price we pay for neglecting its upkeep for so long. You don't have to be a financial genius to know that it is a matter of time before the price has to be paid.

Why put our health and that of our children to more unknown risks by postponing further the unavoidable? For a postponement of the inevitable, in the form of longer time to meet the directives, is all we are likely to get. And while we're "renegotiating" EC directives the price in terms of our health keeps mounting A R T Kemasang 50 Keswick Road.

lapanese confusion

THE JAPANESE election result contains no big surprises, at least for those who have followed recent opinion polls. The Liberal Democratic party which has gov-erned the country since 1955 has lost its overall majority, but remains easily the largest party. In fact its relative dominance has been increased by the collapse of the Social Democratic party, hith-erto the main opposition. The three new parties advocating political reform have done well - espe-cially Mr Tsutomu Hata's Japan Renewal party - but their success has been gained more at the SDP's expense than at the government's. Clearly the SDP's themes and style, essentially those of the old left, no longer seem relevant to those Japanese voters who are keenest for political change.

を (2000年) ・ (2000年)

٠..

) []

The short-term outcome will almost certainly be a coalition led by the LDP and including one or more of the new parties. But it may take weeks to emerge, as there is bound to be intense bargaining over both policies and cabinet posts. Meanwhile Japan has reported a big increase in its trade surplus during the first half of this year. A period of political uncertainty at this point will be irritating to its trading partners, since Japan will presumably lack a government with the authority either to make new trade agreements or to pre-empt foreign pressure with measures to boost domestic demand such as cuts in income tax and in interest rates which would be far preferable to agreements on specific imports.

Balance of power

But even that consequence is not certain. During the election campaign the outgoing Miyazawa government, generally perceived as a discredited lame duck, defied conventional wisdom by reaching both multi- and bi-lateral trade agreements. One of the biggest problems for outsiders dealing with Japan is, precisely, to discern where power really lies. The present system neither reflects the real-relationship between different centres of power, not gives effective voice to the changing balance of sentiments and aspirations among the population. The election campaign, including that of the reformers, illustrated all too clearly how opaque and idiosyncratic Japan's political style remains. Consequently one of the main hopes from any reform must be that it will bring greater trans-parency, as well as greater decisivene

A more transparently run Japan would be easier to understand and to do business with. A more decisively run Japan would be better equipped to deal with the struc-tural blemishes on its economy, and to confront the external challenges the country now faces: the changing relationship with a US which may not be so committed to holding the security ring in Asia for ever, the evolving foreign and defence policy challenges in Asia itself; and the pressure for Japan to match its economic power with a stronger international role.

Political division

The question is what bearing the election result has on all this. The heavy socialist losses and the success of the new pro-reform parties do at least suggest that the old left-right divide in politics is being replaced by a new fault line between conservatives and modernisers. But that will not quickly, or perhaps ever, be reflected in a clear-cut division between political parties. Not all the conservatives are in the LDP. and by no means all the reformers are in the new parties. indeed, perhaps the greatest danger to the interests of reform lies in the pos-sibility that the LDP's electoral performance - in all the circumstances a remarkably resilient one - might strengthen the hand of conservatives within the party. And a resumption of faster growth could easily boost support for the LDP again, thus leaving in place the cosy bureaucracy/business condominium which has ruled Japan since the 1950s.

One effect of this would probably be further defections from the LDP, in the midst of a bitter argument about electoral reform. The parallel with recent events in Italy is obvious, and not necessarily encouraging. Indeed, in one respect Japan has moved closer to the pre-reform Italian situation: its dominant party will now be racked not only by internal faction-fights but also by constant

wrangling with coalition partners. At best, Japan will gradually conjure from this confusion a more efficient and more genuinely representative political system. But it will hardly do so quickly, and maybe not at all.

The cost of nuclear power

THE GOVERNMENT will shortly announce the terms of reference for this autumn's review of UK nuclear power industry. This is an important moment for energy policy because it will determine whether Britain advances further down the nuclear route, whether it pauses or even retreats. At the moment, only one nuclear station, Sizewell B, is being built, and no others have been authorised. Many first-generation nuclear reactors will reach the end of their lives during the 1990s, and decisions will have to be taken soon if they are to be replaced.

The indication from the Department of Trade and Industry is that the review will focus narrowly on the economics of nuclear power. This is partly because last win-ter's coal crisis aired many of the wider issues in Britain's energy debate, such as the need for a more active energy policy (answer, no), and the diversity of Britain's energy supplies (which was found to be adequate). Furthermore, only one question needs answering, and that is whether the future development of nuclear power can be financed by the private sector, since the government has no intention of doing it.

This makes a refreshing change from the approach of earlier governments which handed huge subsidies to the nuclear industry for a variety of ill-founded reasons, and landed the electricity consumer with large bills which are still being paid.

City's help

But much will depend on how the question is asked. If the government is only interested in whether the City would put up E3bn to build Sizewell C tomorrow, the review will be a waste of time since the answer is clearly No. Only three years ago the nuclear sector had to be cut out of the electricity privatisation programme because investors would not buy it. The situation is not much different today. Nuclear Electric and Scottish Nuclear, the two state-owned utilities which own most of the nuclear power stations in Britain, have made headway in reducing their costs. But nuclear power is still a long way from the point of being commercially financed.

The more interesting question is whether the economics of the nuclear industry reflect the full costs and benefits of running nuclear power stations, including external environmental costs, and if not, how these should be factored into the calculations so that a better judgment can be made.

Decommissioning costs For example, the City's uncertainty about nuclear centres largely on the question of decommissioning costs – for which there are few reliable calculations – and waste disposal. The review must get to grips with these numbers and come up with fuller answers than were produced by the recent National Audit Office report. It also needs to unravel the economics of waste disposal, including Thorp, the nuclear reprocessing plant, whose costs have a strong bearing on the performance of the nuclear operating companies.

By the same token, the review should consider the environmental advantages offered by nuclear power, which does not emit carbon dioxide or sulphurous gases Given the UK's international commitments to clean up its atmo-sphere, this is a measurable benefit: the more nuclear power stations, the less need to invest in a costly clean-up of conventional stations. However this advantage does not currently help nuclear's commercial case because it is not reflected in the cost structure of nuclear projects.

This is not a reason in itself for invoking the national interest yet again on nuclear's behalf. But it does point to the need for a more thoughtful way of calculating environmental benefits and factoring them into the appropriate

accounts Britain has a surplus of generating capacity and an abundant supply of energy sources, not least of gas, which combines nuclear's advantages on air pollution with lower cost. At present, it is as clear as it can be that there is no commercial case for building additional nuclear power stations in Britain, but hydrocarbon prices will rise at some point and when they do, rigorous costings of the nuclear option need to be available. That should be the goal of the nuclear review.

The second secon

ou need walk only a few hundred yards from Procter & Gamble's imposing twin-domed Cincinnati headquarters to appreciate the market forces which have prompted the consumer products giant to announce its biggest round

of job cuts and factory closures. In a Walgreens discount drug store in the centre of the Ohio city a 12-ounce bottle of P&G's bright pink Pepto-Bismol medicine, which treats stomach upsets, sells for \$5.29. But on the shelf next to it, in remarkably similar packaging, is a bottle of Walgreens' own-label Soothe at the enticing price of \$3.99. Lug your shopping basket a few shelves along and you will find a similar pattern repeated with P&G's Tide laundry detergent and its Pampers nappies.

Competition from retailers' own private-label goods and cut-price branded merchandise is causing much discomfort in the US to large household and personal products manufacturers - P&G, Colgate-Pal-molive and Anglo-Dutch Unilever at a time when they are locked among themselves in a fierce battle for market share, both in North America and around the world.

This intensifying competition prompted P&G to announce last week that it will cut 13,000 jobs, or 12 per cent of its worldwide labour force, over the next three to four years and close about 30 factories, about 20 per cent of the total. There will be a \$1.5bn charge to earnings in the year which ended in June. The aim is to drive down its costs by \$500m by 1995-96 and give it the financial flexibility to combat its rivals with price cuts, such as an aggressive 15 per cent drop in US

liquid laundry detergent prices it also announced last week. About half the job cuts will come from the closure of factories - some acquired during a takeover wave in the 1980s - which P&G says have been made redundant by changing markets and more efficient production methods.

The remainder will stem from a sweeping seven-month review of P&G's work processes and organisational structure, carried out with the help of management consul-tants Booz Allen & Hamilton. This is designed to sharply cut overhead costs as a percentage of net sales.

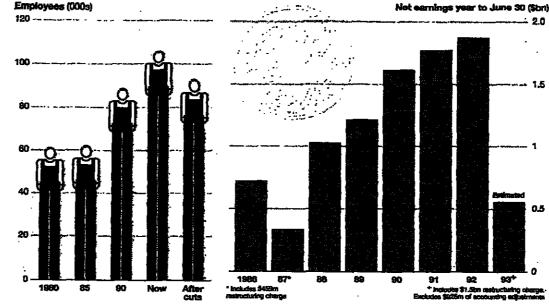

The company is cutting out layers of management, increasing the number of staff for which each executive is responsible and simplifying many practices, such as equipment buying and customer billing.

P&G is not alone in its efficiency drive. Arch-rival Unilever has been consolidating its manufacturing operations in recent years, while the much smaller Colgate-Palmolive took steps two years ago to close nearly one third of its factories and shed 8 per cent of its workforce.

A fierce brand of consumer warfare

Procter & Gamble is slashing costs as the battle for market share intensifies, writes Martin Dickson

Procter & Gamble: the cost of competition

However, the sheer scale of restructuring at P&G indicates that the battle for supermarket shelf space will intensify over the next few years, particularly in the US but also in western Europe.

"I think they are saying that pricing is going to be the key component of marketing," says Ms Bonita Austin, an analyst at Lehman Brothers, who forecasts a squeeze on smaller manufacturers and further consolidation of the industry.

But the restructuring raises fresh questions about consumers' brand loyalty and the size of the price premium big manufacturers such as P&G can command nowadays over cut-price rivals. Investors have been nervous about this since Philip Morris was forced to cut the price of America's best-selling Mariboro cigarette sharply earlier this year because of competition from

unbranded rivals. Still, at least P&G is pushing deeper into the fray from a position of strength. Over the next few weeks it will announce record 1992-93 profits (before the \$1.5bn

its balance sheet is strong.
The cuts, therefore, are not those
of a flailing US giant, such as IBM, which has lost touch with the market-place, but rather a pre-emptive strike to prevent an erosion of its hold on consumers.

The company, long-known for its toughness, product innovation and a somewhat secretive, in-bred culture, became even more aggressive in the 1980s when mature US markets for its core laundry and household products pushed it into a twopronged strategy: rapid global expansion and a push into new sectors offering faster growth, such as beauty care and over-the-counter medicines.

This, coupled with buoyant global economies, produced extremely strong earnings growth in the late 1980s. But since 1990 the pace has slowed to an unspectacular annual average rise of just 9 per cent.

its international business, which now accounts for more than 50 per cent of revenues, is still growing strongly, with volume sales up 10 per cent in 1992-93. But profit marcharge) of more than \$2bn, up more gins internationally are lower than than 10 per cent on last year, and in the US, which P&G has been

relying on to fund the global push. Yet the US market has been weak, with P&G's sales volume up just one per cent over the past year, due to recession. This has intensified competition and the temporary dislocation caused by a radical change in the group's marketing strategy to a system called "value

Under the old system, P&G ran trade promotions to boost sales, offering big but periodic discounts to retailers and wholesalers. This was inefficient, since it encouraged the buyers to stockpile discounted goods and forced P&G to keep extra manufacturing capacity to handle big swings in demand.

The new system, introduced on 70 per cent of P&G's US products over the past two years, cuts trade promotions and uses the savings to ensure lower prices throughout the year. The change has angered some retailers, who relied on the promotions for a good part of their profits, rather than passing them on to consumers; as a result P&G's market share initially suffered. However, the company insists

share have begun recovering over share have begun recovering over the past six to nine months and that its "value pricing" brands are performing significantly better than those on the old system.

P&C claims to have blunted the threat from private-label and cheap branded goods, which it reckons

controlled 21 per cent of US markets in which it competes in the first half of this year, up just one per

cent from a year ago. Mr Edwin Artzt, P&G's chairman since 1990, argues that the recent concern over consumers' brand loyalty is exaggerated. Private-label goods, he says, have been around for a long time and will tend to gain share in a recession, when consumers are more price conscious, and

lose it during a recovery.

However, no one really knows whether this is so in the 1990s, or whether there has been a fundamental shift of attitude among costconscious western consumers in

till, it is hard to argue with his second proposition: that the challenge for branded consumer products companies is to ensure that the premium they charge accurately reflects consumers' perceptions of the superior quality of their goods. Marlboro's price, which was nearly double that of cheap generic

brands before the recent cuts, had got out of line with the market. P&G, Mr Artzt says, does not intend to do the same.

Consumer perceptions depend not only on price but also advertising, which P&G says it plans to increase (on top of a 5 per cent worldwide rise last year), and on product inno-vation. Here the company's recent record has been mixed. Its strength is demonstrated by the way it has turned an obscure shampoo called Pantene into the top-selling brand in the world in just three years. However, it has recently lagged Kimberly-Clark in new product introductions in P&C's most impor-

tant single revenue generating seg-ment, disposable nappies. The impact of all this on P&G's profits will depend on just how much of the \$500m cost-savings it has to throw into the price war. Mr Artzt, while careful to avoid predictions, says that "we fully expect our growth rate to increase".

Some Wall Street analysts are inclined to accept that. However, there are sceptics such as Mr Gabriel Lowy of Oppenheimer & Co, who says P&G's earnings growth will remain at about 9 per cent, which he estimates is its annual average over the past 45 years. In other words, respectable, but hardly exciting. But whoever is proved right, the

only clear winner in this war is

Reluctant banker run to ground

Mr Jacques Attali. the object of recent excessive world media attention. has resigned from his prestigious post of president of the European Bank for PERSONAL Reconstruction and VIEW Development. As I

was involved from the outset in January 1990 in the discussions on the establishment of the bank and the selection of its first president, I would now, with hindsight, like to say a few words. Mr Attali has never been a banker in the true sense of the word. He has never worked in a bank. He was a typical French intellectual (that is, a socialist intellectual, visibly on the left of the political spectrum), a writer publishing a book every year and an adviser to President François Mitterrand of France. He was not a conventional person and he certainly never wanted to play a conventional

world around him and developments in Europe in particular.
The wholesale fall of communism

in 1989 and the ambitions of the French to play a new role in Europe gave him the right opportunity. The entire world was - at least in the ory - prepared to do something for the post-communist countries.

To this end the EBRD was founded - without much enthusiasm from bankers, economists and financiers – as a purely political undertaking, pushed through by the European Community, which has a majority shareholding in the

From the beginning there were arguments over the EBRD's role. Should it offer the "usual" loans, perhaps a little more cheaply for individual projects? Or should it co-operate with countries and governments and undertake regional planning studies (which I favoured) as a prelude to restructuring whole branches or sectors?

There was also dissent about its location: should it be in the centre of the world's financial markets in London; or should it be based in saw (and wanted to see) the EBRD eastern Europe, where its work as something totally unconven-

Smoke rings

From cramming the lines to clearing the air. Squeamishly capitalist Californian long distance telephone company Working Assets which has regularly offered its subscribers free calls to Hillary

Clinton and other US eminences to lobby for causes such as nationalised health-care – has hit on another do-gooding dodge. This time its target is the permits

the Environmental Protection Agency issues to electrical utility companies setting a specific limit, according to their size, on the amount of sulphur dioxide each may emit into the atmosphere.

Although intended to control the total amount of the emissions, the permits are marketable. A holder that manages to make do with less than its quota can sell the short-fall portion to another

which wants to belch out more. So Working Assets is proposing to put a percentage of the bills paid by its subscribers into a fund to buy up the unused permits, and take them out of circulation

altogether. "If you want to do something to reduce pollution, this is probably the easiest and most direct thing you can do," says owner-president Pete Barnes, "Every dollar keeps about ten pounds of sulphur dioxide out of the air."

Well, maybe - unless the agency resorts to the printing press and issues new permits to fill up the space the company has cleared.

Marketing games

Lights at the Treasury and S.C. Warburg doubtless flickered all weekend as the vendors of BT3 tried to separate the institutional sheep from the speculative goats in the professional part of the sale. The clustering of bids around 12p over the market price of BT shares suggests greater enthusiasm than there was in BT2 when fund managers kept all the interest saving associated with partlypaid shares. Still, that is more of a reflection of the outlook for BT and UK equities than the marketing effort. Overseas investors may simply view BT partly paid shares as a geared play on the UK market. The increase in allocations to UK retail holders thus looks odd since institutions were prepared to pay so much more. Given that there will be little immediate premium for retail stags to sell into, perhaps Warburg is making the job of stabilising the issue easier by keeping professional investors hungry.
One troubling aspect of the BT3

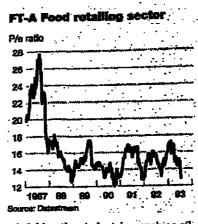

saga needs sorting out before the sec-ondary sale of the power generators next year. The Treasury, determined to get maximum value for its stake, included in a little self-help by twist-ing the Stock Exchange's arm over reporting of large trades. There are concerns over market manipulation around share offers. But that applies equally well to the government and Warburg making up the rules to suit themselves as it does to institutions trying to depress the price.

A widely agreed framework for the stabilisation of issues both before and after flotations is needed. The failure to produce one promptly will leave the SIB's and the exchange's leaky ship still lower in the water.

Consumer products

Just as the market had almost persuaded itself that the Mariboro cigarette price cuts reflected unique pressures, along comes Procter & Gamble and attacks detergent prices. P&G's campaign may have the specific intention of forestalling the rise of private labels in the US. But combined with similar moves elsewhere from Heinz and BSN, it suggests consumer products manufacturers are now expending mighty efforts to drive down prices, thereby reversing the cosy industry trend of the 1980s. Low inflation, slow growth, intensifying competition and heightened consumer perceptions of value are squeezing brands' premium prices.

Price deflation has already made life

painful in other industries, such as oil. Such pressures apply not only to manufacturers but also to distributors Shareholders in the slipping sands of the UK food retailing sector may have further reason to question their footing. Decelerating inflation is reducing profits expectations. The flerceness of the big three grocers' fight against Costco's planning application for a warehouse club highlights their worries about lower-margin competitors.

The leading superstore operators suggest gross margins are now levelling out after many years of successive rises. Given that new stores generate higher-than-average gross margins, this implies those from existing stores are already sliding. Earnings and dividend growth from the sector may still average 8-9 per cent over the next few years. That may seem parsimonious when compared with the rates of growth in 1980s. The market, though, seems to be discount-

Emerging markets

When the head of Morgan Stanley Asset Management is pictured in a scary bear costume on the front of a US business magazine, it is clear some investors are getting worried. With the exception of Japan, most of the world's mature stock markets have been lacklustre performers this year, though some European bourses have been a little perkier recently.

Worries over a secular downtrend have spurred a renewed interest in emerging markets. In Latin America and the Pacific rim, in particular, economic growth rates remain strong. Moreover, these regions seem likely to increase their slice of global GDP sig-nificantly by the end of the decade. Fund managers are beginning to juggle their portfolios to reflect the new reality. Those stock markets showing the best returns in dollar terms in the first half of 1993 were Turkey, up 129 per cent; Brazil, up 55 per cent; and Jordan, up 39 per cent; Still, it would not do to give up on

the old world just yet. There is a touch of tulip bulb fever about the rise of some emerging markets. Their low liquidity accentuates their volatility and limits opportunities for investment on any scale. Nomura Invest ment Trust alone has some \$360hn of funds under management, worth more than the capitalisation of the entire Paris bourse. Such funds have little option but to keep the vast bulk in secure markets in the developed world, where privatisation is likely to place increasing demands on them.

United Newspapers

There appears to have been something of a whispering campaign against Lord Stevens' stewardship of United Newspapers. Given his past involvement with the Invesco MIM fund management group, he is not one of the City's favourite figures. But United's trading record over the past few years has been respectable. There is little reason to let personal consider-ations cloud United's £190m rights issue which closes tomorrow.

The substantive worry concerns what United will do with the money. The company has not spelt out how it will use the proceeds, apart from reducing gearing. Shareholders are always suspicious of handing over their cash for unspecified purposes. United's £250m acquisition of the disappointing Extel shows its record is not spotless.

News International's launch of a tabloid price war last week has also unsettled United's shares. The early indications are that the Daily Star has been caught up in The Sun's wash but that the Daily Express has been little affected. It seems unlikely that News International hopes for anything as crude as knocking the Daily Star out of business. Although the Daily Star incurs losses it accounts for about 20 per cent of the through-put of United's printing plants and helps defray overhead costs.

Ironically, United's rights issue, which has been fully underwritten, may serve as a spoiling action of its own. Institutions flush with United paper may prove more resistant when Mirror Group Newspapers' administrators come knocking at the door.

THE ORIGINAL DALVEY BUSINESS CARD CASE

INDIVIDUALITY AND FINE CRAFTSMANSHIP Amid the organisers, filofaxes and credit card holders of today, the Dalvey Business Card Case stands its owner apart. Elegantly slim, lightweight yet robust, it is a splendid decorative and practical personal accessory. INSPIRED BY VICTORIAN AND

EDWARDIAN ORIGINALS, the design itself is entirely unique. It is made from high quality stainless steel superbly polished to give a magnificent linish which does not tarnish. It is decorated with a solid brass plate on which initials can be engraved, or a company logo embossed. Precision engineered and hand finished, the smooth, slender Card Case is packed in a presentation box accompanied by an illustrated booklet of period etiquette.

COMPLETE PROTECTION of your cards is ensured. Each one will emerge in pristine condition, to represent you as it should. FINE VALUE AT £24.95 As a

personal, corporate or business gift the Dalvey Business Card Case is unlikely to be bettered. Engraving of up to 3 initials £4.50 and p&p £1.75 are extra. CORPORATE ENQUIRIES WELCOME

Please phone or fax us for quotations for quantities and details of our full range of unique stainless steel gifts and accessories. Grants of Dalvey, FREEPOST 1032,

Monday July 19 1993

Takeover activity is well below that of the late 1980s. Parts of the corporate finance market, such as advice on privatisations and cross-border deals, are buoyant, but small businesses are finding loans harder to obtain from cautious banks, writes Robert Peston

Small deals, fewer risks

basics. The days of hostile mega-takeover bids or of radical innovations in financing techniques seem long past.

Today's mergers tend to be motivated by industrial logic rather than driven by pure financial goals. Companies have become more conservative in a second sense - they take greater care to understand the risks associated with selling a complex financial instrument.

Nonetheless, the volume of debt and equity issues by public companies has reached record levels in the UK and US over the past few months.

These trends are a response to several factors: ■ Worldwide recession, which has reduced companies' appetite for expansion and thus for

big takeover bids;

The huge level of indebtedness taken on by companies in the boom years of the 1980s, which now needs refinancing;
■ Accounting changes, which have reduced the scope for the sort of financial engineering which encouraged big takeovers and also the issue of

complex securities: ■ The financial difficulties of companies which issued hybrid securities or dabbled in derivative markets without properly understanding the risks or the

Published statistics show a stark picture of low takeover.

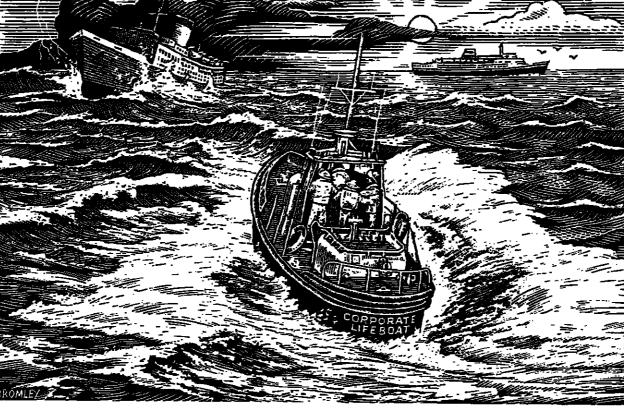

THE CORPORATE finance activity. In the UK, for exambusiness has gone back to ple, Schroders came top of Acquisition Monthly's league table of financial advisers in the first six months of this year, having given advice on seven takeovers with an aggre-

In the late 1980s, when individual bids were worth billions, a merchant bank would have just scraped into the top ten with that figure.

There was an almost equally flat performance in 1992, when there were only two takeovers or mergers valued at over £1bn: HSBC Holdings' takeover Midland Bank and Reed International's merger with Elsevier of the Netherlands. S.G. Warburg topped the 1992 takeover league table, having acted in just six deals.

The pattern in the US is similar. The value of takeover deals in 1992 was \$97.1bn. according to Merrill Lynch Business Brokerage and Valuation. This was the second lowest figure in nine years though a third higher than in the previous year. However, the volume of deals in the US is picking up, even if the value of the individual deals is small.

There are also some signs that those merchant banks and securities firms which have invested most heavily in building up international networks of offices are belatedly deriving a competitive advantage. According to Securities Data.

majority acquisitions of companies anywhere in the world in 1992 have all made huge efforts to establish operations across the globe: the US house, Goldman Sachs, in the leading position having advised on deals worth \$54bn, the First Boston/ Credit Suisse network as number two with a tally of \$33.6bn, and S.G. Warburg of the UK as number three, with deals

worth \$33.1bn. However, one part of the corporate finance market which is booming is the giving of advice on privatisations. The new French government recently announced an extremely ambitious privatisation programme. The Italian government, in spite of the country's economic difficulties, is pressing ahead

with the sale of state assets. The UK government is continuing to realise public assets the sale of the third tranche of British Telecommunications shares being the biggest such

Finally, there are substantial sales of state assets throughout eastern Europe and south America - while in China there are opportunities for joint ventures and licensing

Another relatively buoyant part of the corporate finance market is cross-border deals. In the past 18 months, highlights have included the Reed-Elsevier merger, British Telecommunications' tie-up with MCI in the US, and Hanson's acquisition of US-based Quantum.

Meanwhile, in the UK there has been a surge of equity issues, as public companies take advantage of buoyant stock market conditions to rebuild their balance sheets. According to a survey by IFR

Securities Data, the amount of new equity capital raised in the first half of this year was 6.6 per cent more than that raised in the whole of last year. A total of £11.8bn has so far been raised this year, compared with £11bn in 1982. This year's first half total of 294 new issues is 72 per cent ahead of the figure at the same stage last year.

The preferred method of money raising continues to be the traditional rights issue of shares to existing shareholders, with £7.48bn having been raised in this way.

S.G. Warburg topped the league table of merchant bankers handling the new equity issues and Cazenove was the leading broker. In the US, new stocks and

bonds worth \$530bn were sold in the first six months of 1993. well above the previous record of \$445bn set in the first half of The growth of debt offerings

was caused in part by the lowest interest rates in three decades. These encouraged many companies to pay off expensive existing debt with new, cheaper debt.

There was also strong

nies. A record \$47bn in new shares was sold between January and the end of June. However, more than half of this was in the form of initial public offerings or company flota-

demand for equity from compa-

The number of big companies careering towards bankruptcy has fallen, but this is not undiluted good news for corporate finance departments. It has led to a reduction in fee-earning opportunities from advising on financial reconstructions. Nonetheless, the negotiations on restructuring the debt of GPA, the world's biggest aircraft leasing company, have provided rich pickings for a pack of financial,

legal and accounting advisers. But one type of company in several countries - notably the US and the UK - has become concerned that traditional sources of finance have become more difficult to tap. Small and medium-size companies complain that banks are increas. ingly reluctant to lend to them or only to make loans at penal rates of interest.

Banks quibble with these complaints. They say that the recession has led to a shortage of demand for funds from "bankable" companies. If the demand for loans was there. the banks say, they would pro-

What has happened is that banks have become more riskaverse in the past couple of years. Their biggest loan losses in recent years have come from lending to small compa-nies, so they have become far more careful in analysing the quality of the potential borrower before making a commit-

A second factor is reducing the supply of new loans to this sector. Regulators are forcing banks to adhere to tougher standards of capital adequacy rules governing the amount of capital a bank must have in proportion to the loans it

makes - than a few years ago.

The less that a bank lends, relative to a given stock of capital, the better its capital ratio. So today when capital is in short supply, banks are lending at a slower rate than in the 1980s. However, small companies are particularly vulnerable to this slowdown in bank lending, because even bank

regulators perceive them to be

particularly risky customers. When calculating the risk asset ratio, the commonly agreed international standard of capital adequacy, a home loan or purchase of government bonds carries a lower risk weighting than a corporate loan. That means if a bank makes a loan to a small company of a given size, its capital ratio is reduced by a greater amount than if it makes a home loan of equivalent size so it will only make that corporate loan if it believes the profitability of doing so is greater

than in making a home loan. In other areas of corporate finance, leading investment banks say their pipeline of potential mergers and acquisitions deals is far greater than a year ago. What no one is predicting is a return to the corporate finance boom conditions of the 1980s.

Corporate Finance

☐ EUROPE

THE market for merger and acquisitions may be quiet in London, but according to some of the biggest corporate finance houses in the UK, European cross-border activity has been picking up over the

past six months. Mr Steve Mullins, managing editor of Mergers & Acquisitions International, believes the past six months have confirmed a trend of the past year: The days of big takeover deals are now over. And it is questionable whether they will return. But cross-border joint ventures, alliances and mergers are back."

The spotlight over the past few years has shifted to the Continent. Goldman Sachs, which cornered the market in defending targeted companies, says that in 1992 around twothirds of the European bids were based on the Continent. with a third in the UK. In 1987, the reverse was true. Some of the biggest banks based in London, such as J Henry Schroder Wagg and Morgan Grenfell, now devote a far bigger share of their resources and staff to work on Continental deals.

Lazard Houses, involved in the merger between Kingfisher in the UK and Darty of France earlier in the year, attributes

the growth in cross-border activity to the fact that European companies are too small

Mr Ali Wambold, head of Lazard Brothers international work and a partner of Lazard Freres in New York, says: "Most European companies are now too small for much consolidation within their own backyard. They can either grow through organic growth or through diversification. Since the latter is out of fashion more companies are seeking to expand through cross-border

nerger or acquisitions." Mr David Challen, head of corporate finance at Schroders, says European cross-border mergers and acquisitions account for half of all of the investment banks' public activities - a very different picture from five years ago.

"We decided to develop a serious capability in Europe which has coincided with far more of this activity. US businesses also increasingly believe that they need to be established within this growing market."

Mr Derek Higgs, managing director of SG Warburg. expects a continuing amount of special cross-border activity. "Most of the business will be

"As the recession really hites, businesses are going to have to come to terms with the fact that they must rationalise. The conditions of activity are there even if they are not always being turned into trans-

Mr David Jarvis, co-head of European Investment banking at Salomon Brothers, is encouraged by the increase in cross-border mergers and acquisitions.

Yet the pick-up in activity appears to be at odds with what is happening on the Continent, with many countries going deeper into recession. However, some advisers

believe the recession on the Continent offers opportunities as well as problems.

Mr Wambold says that two years ago most German companies were not for sale and even those that were, were "scooped out under our nose" by another German company. The recession, in Germany's case the first since the second world war, has driven companies in need of capital to contemplate mergers or acquisitions for the first time.

Those sentiments are echoed by Mr Challen. "Recession in continental Europe creates opportunities. Some companies may find there is no option but to do something."

He has not yet experienced a significant increase in activity from privately-owned German companies, but believes the recession might be the factor that forces some of them into contemplating the sale of their

However, as yet they are not showing any signs of going on a purchasing spree. Mr Wam-bold still sees the US as the best bet for such activity. Many companies having beaten back the alligators over the past three years and are now looking to expand them-

While much of that expan-

sion is still happening in the US, which is big enough to accommodate much of the consolidation that many European companies cannot complete in their own country, Mr Wam. bold believes US companies will increasingly see the opporfunities that exist in Europe.

Nonetheless, a problem that still exists for prospective buy. ers is the expense of the possible targets. The stock markets and multiples remain high

Mainly for this reason Mr Erik Linnes, director at Klein wort Benson, warns against over-optimism in the cross-border market. While the Continent is in recession many buyers are going to sit on their feet. "It's still a brave time for any public company to put its head above the parapet and make an acquisition."

However, Mr Linnes says some buyers are "bottom fishing for bargains". He attributes the busier cross-border activity to the fact that a number of companies have decided to "swim against the tide". Those companies which are sellers also know that it is not the best time to dispose of their business and will be waiting for signs of an upturn in the.

☐ UNITED KINGDOM

Confidence begins to return

AFTER the exciting years of the late 1980s, the UK mergers and acquisitions market went into hibernation in the early 1990s. Last year it barely stirred in its deep sleep. But now there are signs that the market is waking up.

This is not to say that a return to the action of the last decade is expected, in the short or even long term. It is agreed that the frenetic activity seen then is unlikely to be repeated.

But one merchant banker reports the first half of 1993 has been as busy as ever before in his corporate finance department, though much of the work is new issues and privatisations as well as bids and deals activity.

Another says: "Confidence is beginning to come back, but slowly. In 1992, companies were keeping their heads down, containing costs and noone wanted to know about making bids. Now they are beginning to look at expanding by acquisition again.'

However, many consider there are few "cheap" companies available to a bidder. The high level of the stock market relative to companies' earnings means businesses are expensive to buy. Furthermore, the increasing amount of research done on companies means there are fewer undervalued stocks around.

Certainly the trend of hostile, break-up bids seems over. Hanson's £780m hostile bid for Ranks Hovis McDougall last November was topped by a recommended £935m offer from rival Tomkins in December. Even the Tomkins bid might have appeared an old-style unbundling attempt but seven months on Tomkins had not made a single significant dis-posal of RHM assets.

Other hostile bids have failed - such as T. Cowie's offer for Henlys Group last summer. and Airtours offer for Owners Abroad this year - as investors have given the target company's management a chance to prove themselves.

Gone too appears to be the simplistic attitude that a company on a p/e of 20 can pay 15 times earnings for another, and make money on the deal. One merchant banker says that hostile bids and financially driven bids are extremely difficult to win. investors want a cash alternative and these are difficult to

Traditionally, companies making share bids have offered a cash alternative through the underwriting system. However, such cash underpinnings are expensive in commissions.

| Top five acquisitions of private UK companies completed in 1992 | | | | | |
|---|-------------------------------|--|-----------------|-----------|--|
| Target (UK) | Adviser | Bidder | Adviser | Value (£n | |
| Virgin Music Group | Goldman Sachs | Thorn EMI (UK) | S.G. Warburg | 56 | |
| Allied-Lyons (UK brewing Interests) | S.G. Warburg | Carlsberg (UK brewing interests) | - | 51 | |
| Del Monte Foods Inti | Charterhouse Bank | Royal Foods (UKI/Anglo American Corp (SA) | S.G. Warburg | 36 | |
| Express Dairy/Eden Vale | S.G. Warburg | Northern Foods (UK) | N.M. Rothschild | 35 | |
| Cope Aliman Packaging | Credit Suisse First Boston | Bowater (UK) | Morgan Granfeli | 23 | |

The takeover timetable in the UK takes up to 60 days from the issue of the first offer document, and longer if a competing bid appears. Underwriters demand higher commissions for longer risk periods, especially in bids where if the stock market falls during the offer period. shareholders in the target company are more likely to opt for the cash alternative leaving more stock with the underwriters.

Airtours, for instance, said its failed bid for Owners Abroad cost £9m, of which £5m covered underwriting commissions and advisers' fees.

Agreed deals can be easier to finance, for example using vendor placings which can be arranged to coincide with the announcement of the bid, or issuing convertible Eurobonds. Pilkington's £95m purchase

of Heywood Williams glass distribution arm, for instance, was financed by the issue of a sterling 5-year bond with

will produce one of the biggest chains in the UK, with more than 2,000 pubs. Only two years ago Devenish successfully fought off a hostile bid

Morgan Stanley (11)

Robert Fleming (-)

Touche Ross (10)

The high level of the stock market relative to companies' earnings means businesses are expensive to buy

equity warrants. Sedgwick, the insurance broker, financed its acquisition of Medisure, a private health insurer, by a share placing and later issued a convertible bond. T & N, the motor component maker, financed its purchase of Goetze, a German piston ring manufacturer, with

If hostile bids are out of fashion, agreed or friendly deals are the vogue. And while con-glomeration – buying an extra leg - is also demodé, industry restructuring through friendly

Says one corporate financier: "There is a trend for less financially-driven activity and more industrially-driven activity." Such deals are more likely to be friendly, since, he argues, if there is a strong commercial logic then both sides will

recognise it.

Take for instance the recent agreed deal between Greenalls and Devenish. The combination of the two pub operators

from Boddington.

Other instances of commercially driven deals are BT's recently announced alliance with MCI of the US, which involves a joint venture between the two and BT taking a 20 per cent stake in MCI; and Richemont's decision to rearrange its luxury goods and tobacco brands into separate companies.

Another trend is towards cross-border deals. Many companies now feel constrained by their domestic markets and want to expand internationally. The agreed bid by Kingfisher, the retail group, for Darty, the French electrical chain, was Kingfisher's first significant move outside the

One expert says that in the past five years, more than 60 per cent of merger and acquisition activity by UK companies has involved buying or selling a non-UK asset. To meet these needs many banks are now

stressing their global strengths, and ability to advise clients on doing deals in different continents.

9,973

Many UK merchant banks have wide networks covering Europe, America and the Far East. Also, those US banks which have succeeded in the UK market have done so by stressing their international expertise. Goldman Sachs, for instance, developed its UK business initially in the early 1980s by advising UK companies on buying businesses in the US.

Within merchant banks one trend has been to develop expertise in particular industry sectors. If a corporate financier knows an industry intimately he can suggest deals to companies, or think laterally around a client's problem.

Fees for corporate finance work do not seem to have fallen much, in spite of competition for work. One merchant banker says: "There has been some evidence of fee cutting. If clients are in recession we must be as reasonable as we can be on fees. But no one is gaining market share on that basis." Many say that fees are heavily success-related, with fee structures designed only to cover costs if a transaction

HEADY stock market A and a heap of economic uncertainties have kept the lid on merger and acquisi-tion activity in the US. There are some signs that business is stirring, but it is a patchy trend, made up of industriallydriven deals and much reshuffling of corporate assets.

The overall figures tell part of the story. According to Merril Lynch Business Brokerage and Valuation (figures are calculated on a more limited basis than the accompanying table by Securities Data), 2,578 M & A transactions were announced in 1992 and the total value of these proposed deals reached \$97.1bn. That was a significant improvement on the 1991 tally: the number of deals was up by 39 per cent, while the aggregate value of the transactions increased by 35 per cent. But, while the deal volume

figure hit its highest level for six years, the value of the proposed transactions was also the second lowest in nine years. This can be explained very simply. Last year saw an appreciable rise in smaller deals, but very little evidence that either the blockbuster mega-bid or the hostile take over - the combination which provided such rich fees for investment banks in the 1980s - is returning. There were just 18 deals worth \$1bn or more announced last year.

Since the start of 1993, the trend has been more ambiguous. For fee-hungry bankers, the year did not start well Again on Merrill Lynch's data, the total value of proposed mergers and acquisitions in the first three months fell by more than one-fifth from the equivalent 1992 figure, to \$18.1bn. The volume of transactions, however, was down by a less painful 2 per cent at 569.

But this pattern changed significantly in the second quarter, when a handful of mega deals - worth \$1bn or more . were unleashed. As a result, Securities Data, the New Jersey-based financial information group, estimates that the value of domestic mergers showed a 25.6 per cent increase between the first halves of 1992 and 1993. The number and value of deals announced in May "were the highest for a single month since July 1990", it reports.
Included in this wave of

transactions was a \$4.3bn tie-up between British Telecom and MCI; a \$3bn-plus merger of Galen Health Care and Columbia Hospital Corporation; the \$2.5bn joint venture arrangement between Time Warner and US West; the \$2.4bn merger of AMAX with Cypress Minerals; and a \$2bn merger between Price Company and Costco, two warehouse club

Is this surge in "big deals" a flash in the pan? Bankers, who Maggie Urry have every reason to talk their been triggered. Moreover,

book, say no. They point to a handful of broad economic trends, plus a number of specific sectoral developments which - by their reckoning should ensure that the transactions continue to flow.

The first is the impact of very low inflation - or even falling prices - in many industries, and stagnant demand. This has forced companies to focus on cost-cutting and streamlining their operations. So a spate of divestments has

because of the heady stock market levels, "demergers" or public offerings have become an increasing popular option, rather than more conventional trade sales. According to Securities Data, almost 30 spin-offs either in the form of a distribution of stock to existing shareholders in the parent company or via a flotation of shares in the subsidiary - were announced in the first 24 weeks of the year.

The "demerger" movement has had the odd setback, how-

ever. A plan by Marriott Corporation, to spin off its hotel management business, leaving the ongoing company to hold the property assets and the bulk of the group's debts, created a storm of protest among bondholders. The proposal was fine-tuned and some peace bought, although litigation continues.

But, even if the proposal is eventually implemented, some advisers suggest that the Marriott fiasco may act as a warning to other companies. "I think everyone will now consider the demerger option very carefully," says one banker, Meanwhile, a "targeted stock" scheme proposed by RJR Nabisco - which would have involved listing shares pegged to the food division, but creating no legal separation from the group's tobacco interests was finally aborted, amid criticism that the plan was too clever by half. Financial engineering, it seems, is still firmly out of fashion.

It is also no coincidence that the sectors where M & A activity has been most pronounced are those where technological, political or regulatory changes are under way. Perhaps the best example is in the communications field, where what was once a battleground between cable and telephone companies is evolving into a more complex network of joint ventures and alliances. Medical services are another area where the deal flow is expected to continue, if not increase. "Whatever comes out of the Clinton healthcare reform package, you're going to see activity in the hospitals and clinical services," says Ali Wambold, a general partner of Lazard Freres in New York.

N()R

Meanwhile, the cross-border deal flows are spasmodic. With recession hitting Europe somewhat later than the US, there has been a marked lack of interest on the part of Continental European acquirers. Stock market levels in the US are also at historically high levels, and thus a deterrent to buyers. That said, the recent emphasis on cost-cutting and efficiency in the US, plus the nation's improving economic prospects, have made the US corporate sector inherently more attractive. There has been interest from UK purchasers, for example, with the likes of RTZ, Hanson, Bowater and British Telecom all tying up deals in recent months.

Meanwhile, many US companies find themselves confronting a fairly mature domestic market and some burgeoning opportunities overseas. This has encouraged an increasing "internationalism" but the sums involved in the melange of joint ventures, co-operative deals and outright acquisitions are often modest.

Nikki Tait

HE UPHEAVAL in Europe's foreign exchange market last autumn has had a number of side effects, not least of which has been a reappraisal of currency risk management by many companies.

Currency risk management is no longer relevant only to because many companies now have overseas operations. However, volatility has also

had the effect of raising the cost of instruments, such as currency options, used to hedge exposure to the foreign exchange markets. To win the hearts and minds of corporate treasurers, who tend to baulk at what they see

as overpriced insurance poli-

cies, investment banks have

become more adept at struc-

turing more complex options -

known as exotic options -

of companies at a lower cost. important," said Mr Albert Maasland, manager of foreign exchange derivatives marketing at Chase Manhattan Bank in London. "Derivatives on derivatives tend to reduce cost, and if you understand a client's risk profile, you can structure products to suit their

But companies are also aware of the risks inherent in the use of these complex financial instruments.

The loss of £150m in foreign exchange dealings two years ago by the treasury department of Allied-Lyons, the UK food and drinks group, illustrated the potential dangers, if corporate treasury operations are not carefully controlled. The problem stemmed from the practice of writing currency options, which can lead which meet the primary aims to unlimited losses.

"The second generation is

Tracy Corrigan looks at new instruments available to corporate treasurers

Exotic options fit the bill

There are two types of expo-sure which companies may try to hedge, transaction exposure and translation exposure. In the last year, companies have become more active in hedging transaction exposure - the currency exposure stemming from a particular sale or purchase of goods of services. While in the past the tendency has been to hedge next year's budget, or to hedge known sales or purchases a year ahead, corporate treasurers are now tending to look a year or two further ahead. "More companies are saying to themselves that if they have a cur-

gic, they should start to take the volatility out of that risk," said Mr Paul Ward, a director of Salomon Brothers in Lon-

For UK companies which are effectively long dollars, it may seem attractive to lock in an exchange rate of \$1.50 to the pound over several years, for One potential problem with

hedging transaction exposure is that there is some concern that the tax situation may become less favourable in the UK, and the ability to net positions between different parts of the company may be rency position which is strate- reduced in the next Budget.

Attitudes to translation exposure are more mixed. Translation exposure arises in companies' balance sheets when, for example, a UK-based company is operating in the

If it has no debt and is financed by sterling equity. the value of its assets against its liabilities will fluctuate. Some companies effectively hedge against such exposure by borrowing in the relevant foreign currency to match

their assets. Others take the view that since such exposure is only in

in a highly geared company, such volatility may affect gearing and have an impact on banking covenants. There is widespread agree-

ment among investment bankers that UK companies lag their European counterparts in their use of derivatives, particularly in the recent vogue for exotic options.

French companies in particular are known for being highly sophisticated in their use of options - and also have more autonomous treasury departments.

costs are basket options, which allow a company to hedge exposure to a range of currencies, and average rate options, which allow companies to have a smooth rate throughout the year. Average rate options are "a great product for companies with a regular cash flow, because they are quite simple to explain and simple to use for (hedging) transaction exposure," said Ms Sara Sullivan at Chase Manhattan

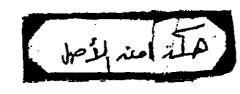

Knock-out options are cheaper because if the underlying spot rate trades above or below a certain level, the option expires. They are generally about 35 per cent cheaper than other options.

Meanwhile, some companies are eschewing options in favour of dynamic hedging. In dynamic hedging, instead of the balance sheet, it is not Among recent popular prod-worth worrying about mere ucts which can help reduce hedged by buying and selling

forward contracts in the market to replicate options. This method creates substantial savings for companies, according to Mike Shilling, assistant director at Record Treasury Management.

Meanwhile, some banks bave also been touting Safes synthetic agreements for forward foreign exchange which are essentially forward contracts that do not require an exchange of principal. As a result, banks need to

devote less capital and are less exposed to the risk that their counterparty will default. There are two types of Safe: the exchange rate agreement, or ERA, which protects the purchaser against a change in the forward foreign exchange spread and the forward exchange agreement (FXA), which gives protection against a change in the spot rate as well as the forward spread

CORPORATE FINANCE 3

Andrew Jack looks at the expanding role of accountancy firms

Rise of a new, bolder breed

GERRY ACHER and Stephen Barrett seem to have little in common as they sit next to each other on the far side of a desk in an office at KPMG Peat

Mr Acher is quietly-spoken. soberly dressed with a plain shirt and a conservative tie. Mr Barrett has a mellifluous voice and youthful looks to match his wide, pin-striped suit, loud,

green braces and pink shirt.
Yet both men work in the same firm - the former a lifetime accountant with what he calls "The House of Peat" and now one of its senior partners and head of KPMG Corporate Finance; the latter a newly-recruited partner into the division from Lloyds Merchant

They epitomise the increasingly blurred description of what constitutes an accountancy firm. They serve particularly to illustrate the new, aggressive breed in the larger firms encroaching into the terrain of the banks in both strategy and culture.

Take, for corroboration's sake, Howard Hyman and Anthony Browne, sitting in an office less than a mile downstream at Price Waterhouse. Both trained as auditors, but the former in particular has taken on much of the charismatic manner more usually associated with bankers than

accountants. Mr Hyman, head of corporate finance for Europe for the firm, is keen to show off his trophies. As he talks, he bounces up from his chair and reaches for an armful of paperweight "tombstones" encased in acrylic plastic, mini reproductions of the documents on deals in which Price Waterhouse has

heen involved. It is an appropriate gesture in a market dominated by show and aggressive marketing. Warming to his theme, Mr Hyman finishes filling the table in front of him with the tombstones and reaches for a trade magazine survey show-

for cross-border mergers and

acquisition work in Europe. We are genuinely a fourbusiness firm," says Mr Hyman, arguing that corporate finance - including insolvency is a strong contributor alongside the traditional areas of accounting and audit, tax and consulting. He says that in the year to June, his division contributed one quarter of the UK's profits, and more than 15 per cent of those across

Europe.

KPMG, needless to say, points to a different set of sta-tistics than PW's, which shows to the contrary that it has dominance of the key elements in the corporate finance sector. Of course, the same trick reverberates around the other Big Six firms - and many of their smaller counterparts.

Each highlights its pre-eminence by some measure, while the partners concerned hint darkly and discreetly about the viability of their competitors. Is a pan-European structure a needless additional cost? Does investigations work logically

sit within corporate finance? Mr Hyman goes so far as to say that he does not want to reveal too much about his own strategy, since he is sure that

CORPORATE FINANCE 4

LOYD'S OF LONDON will finalise its plans to attract corporate investment later this month, signalling an important shift in the character of the 305-year-old insurance market. Lloyd's leaders believe that an influx of fresh capital from institutional investors, insurance companies and individuals is essential if the market's recent losses are not to be followed by shrinkage and possible break-up. But in spite of some encouraging recent signs, the success of the efforts to attract new money is far from

Lloyd's initially agreed to invite corporate investors to join the market in January last year, when the council, or governing body, accepted the recommendations of a market task force, headed by the present chairman, David Rowland. The discovery in the spring of 1992 that the entry of new "incorporated Names" would not require any amendment to the 1982 Lloyd's Act, which sets out the market's self-governing status, led the council to step up its preliminary work. And in April this year Lloyd's announced the basic rules for corporate participation as part of its new business

Underpinning all these developments has been a realisation its existing capital base by

relying on the individual members or Names, who have traditionally supported underwriting with their personal wealth.

Lloyd's losses in the past five vears amount to more than £6.5bn and have left several thousand Names facing the prospect of financial ruin. Since 1989 more than 13,000 Names have been forced either to resign or cease underwriting, reducing overall capacity from £11.1bn in 1990 to £8.7bn in 1993. More than 2.000 Names bave applied to the market's hardship relief scheme, under which Lloyd's reschedules their debts and allows Names a modest income and home. Worse still the average age of the 19,770 Names who continue to trade at the market is more

"Anno Domini and our losses mean that we are an eroding asset," says Mr David James, a Name and leading businessman who joined the council last year. "There is not going to be a new flood of Names. We can only come through this morass if we attract new capital. The reality is we must expect further erosion. If we cannot replace that we are in some trouble." Further impetus for the move to corporate capital is coming from Lloyd's agencies - which handle the affairs of individual Names and manage syndicates. With more than 17,000 Names either contemplating or taking legal

action, agents are anxious to

Lloyd's prepares to take on a new character, writes Richard Lapper

Capital idea ready to launch

attract more stable investors. In its business plan Lloyd's announced that corporate investors would be asked to deposit 1.5 per cent of their stamp capacity (the amount of premium they are allowed to accept according to Lloyd's rules) in 1994 and pay a subsequent annual fee equal to 0.5 per cent of stamp. "Incorporated Names" must also deposit 50 per cent of their stamp with Lloyd's to underwrite (compared to between 20 per cent and 30 per cent for individual Names). Lloyd's aims to achieve average underwriting returns of 10 per cent per year would therefore guarantee corporate investors a pre-tax return of 20 per cent from underwriting. Coupled with investment income of some 7 per cent incorporated Names could hope to achieve pre-tax returns of up to 27 per cent, the business plan says.

lready the prospect of these returns has attracted a number of investment bankers to work on corporate capital projects. Late last year two banks - JP Morgan of the US and SG Warburg, of the UK -

agreed to advise Lloyd's on its listed on the stock exchange plans. Other financial institutions such as James Capel, BZW Securities, Salomon Brothers and Phoenix Securities, a niche securities house active in the international insurance market, are exploring a series of initiatives. Marsh McLennan, Johnson & Higgins, Sedgwick Group and other insurance brokers, which have a detailed knowledge of the quality of the syndicates active at Lloyd's, are working with the banks on developingthese schemes. Among the most developed are: ■ Morgan and Marsh teamed

muda-based company which will provide quota share reinsurance on an exclusive basis to syndicates managed by the Merrett Group at Lloyd's, one of the biggest of the Lloyd's managing agencies. Mr Dennis Purkiss, chief executive of Merrett, says the new company could eventually become an "incorporated Name" at Lloyd's in its own right.

CLM, a subsidiary of Sedgwick, the insurance broker, has teamed up with BZW to launch a £200-300m investment company, which would be and participate in Lloyd's through up to six subsidiaries. each of which would become incorporated Names. While the company would be based in London and eventually listed on the stock market, the subsidiaries could be licensed as insurers in Bermuda, where both the tax and regulatory environment is gentler. BZW is marketing the company among individual and corporate inves-

Phoenix Securities is working with Anton agency at Lloyd's in the development of various vehicles, while Salomon Brothers has linked up with Johnson & Higgins. Marsh McLennan and J P Morgan have launched a \$1bn investment fund, a portion of which could be directed to the Lloyd's market. Two main questions cast a shadow over all these schemes.

tors and hopes to launch it by

the autumn.

Lloyd's has still to convince investors that a plan to isolate billions of dollars of potential liabilities from US pollution and asbestosis will be effective.

these liabilities by transferring all policies underwritten by Lloyd's syndicates in 1985 and all earlier years to a new reinsurance company, NewCo. formed an important part of the business plan.

Lloyd's admits though that the scheme is highly ambitious and is dependent on months of painstaking efforts by market officials. More importantly, Lloyd's is coming under pres sure from groups of loss-making Names to modify the terms on which corporate capital can join Lloyd's.

The rebels argue that corporate investors must pay a higher joining fee or contribute part of their future profits to a fund, which would be used to help pay the losses of Names badly hit by recent losses.

The issue figured prominently at an extraordinary general meeting in July and will be an important part of a confidence vote on which Names will vote by early August. Mr David Rowland, chairman, is keeping his fingers crossed that Names will vote against the rebel motions. Defeat would rule out the introduction of new corporate investors and could seriously jeopardise the market's existence

Lloyd's is taking a bold step forward to attract fresh capital

John Gapper considers the risks posed by small businesses

Banks re-think lending policy

higher returns on capital. Apart from the size of margin, small corporate lending also tends automatically to attract other fee-earning business for which banks have to press large companies. Fees for services such as clearing both corporate and personal. profits, but help to support the

cost of branch networks. However, the assumptions underlying much small corporate business have been put in question by the experience of the last UK economic cycle. Banks failed to assess the risks of lending in the over-heated economic surge of the late 1980s, and were caught in the

backlash of corporate failure. Despite the attention attracted by the well-known cases of corporate failure.

many of the banks' bad debt problems have been caused by small firms. Nearly half National Westminster's bad debt provisions of £1.3bn in branch banking last year were on loans of less than £50,000 -

Banks have drawn three lessons from these problems. The first is that they have assessed the level of risk wrongly. The second is that much of what they took to be retrievable loan capital was in effect equity. The third is that they did not have enough data to understand their debtors.

The problem with the re-assessment of risk is that small business lending risk is closely allied to the severity of economic cycles. This means that much of the calculation of future risk depends on which view the bank takes of Britain achieving more stability. Assuming greater stability in

future, banks would be wrong The problem is what action banks need to take. The British to price loans to compensate

Banks failed to assess the risks in the economic surge of the late 1980s

for a similar wave of corporate failure. Such pricing would raise margins drastically, and would risk them losing market share to others, or to other forms of financing such as leasing and factoring.

The second lesson is illustrated by the fact that NatWest estimates that 25 per cent of the 1m small companies who deal with the bank are continuously overdrawn. They are

preference for shorter-term sources of financing - notably the overdraft which is not available in many other countries - is not something banks can correct alone, although

most are putting more effort into extolling fixed rate loans. One answer would be to try to provide more equity capital to small companies on the model of Germany. However. few UK commercial banks

level to feel confident in taking equity stakes. Moves towards developing venture capital expertise have so far been lim-

Nonetheless, UK bankers are getting increasingly worried about the traditional structure of lending. Mr Brian Pearse, chief executive of HSBC's UK subsidiary Midland Bank, has called for banks to find ways of encouraging equity stakes, including the offer of equity options to small firms.

The third lesson is that banks have discovered little they know about many of the 3.3m small firms with which they have relationships. Partly this is because some relaxed diligence of new propositions in the late 1980s as asset price

rises seemed to make them

Banks tend to argue that this is partly because companies do not know enough about their own businesses. Barclays Bank recently published survey figures showing that 54 per cent of British small businesses do not have a financial plan that includes budgets, and analysis

of cash flow.

Nonetheless, banks are actively thinking of ways in which to encourage the businesses with which they deal to collect and forward more thorough information. Some banks are also trying to monitor account movements to identify earlier those companies which are heading into financial problems.

These developments pose two questions for small business financing. The first is whether particular banks are likely to build a greater market share by moving aggressively into the market while others hold back. The other is whether forms of non-bank

finance will achieve more

As far as individual banks are concerned, the one most likely to build market share appears to be Midland. It has gained both greater capital strength, and treasury and trade finance resources from the HSBC acquisition last year. The bank has been emphasising this in marketing efforts.

As far as wider competition is concerned, leasing and factoring companies and bank subsidiaries are emphasising the benefits of alternative forms of finance. However, the overall structure of small corporate finance appears to depend above all on bank strat-

For the moment, relatively weak loan demand means that not faced by hard choices. But the hardest question for both sides is whether they will force the changes about which they are talking when the recovery picks up, and real choices have

We believe that rolled-up sleeves are more important than pin-striped suits.

When you use the services of KPMG Corporate Finance, you'll get an adviser who works as hard as you.

We believe in being an active partner in helping you achieve your long-term business goals.

Under one roof, KPMG Corporate Finance has huge reserves of industry knowledge and practical experience.

Whether you're thinking of a strategic acquisition, a merger, a disposal, a management buy-out, or going public, talk to us early, and we'll help you plan it, and carry it through, to achieve the best possible outcome.

KPMG Corporate Finance is a practising name of KPMG Peal Mennick which is authorised by the institute of Chartered Accountants in England

What's more, we'll help you after the deal as well - to make a good deal an even better one.

We'll offer practical advice, working with you to understand your business, its needs and challenges.

We'll be your long-term partner, consistently and actively helping you to move your business forward.

If you'd like to discuss what we could do for you, in the strictest confidence, please call Gerry Acher our Head of Corporate Finance, on his direct line 071-832 8640 today.

oans that change their spots

Robert Peston on the secondary market in distressed corporate debt

banks and big companies have

Most banks have increasingly felt the need to pursue profit, which has had a number of consequences, not all of them pleasant, for companies.

Banks have, for example, diversified into new businesses, such as investment banking. It has been quite common for one of these new investment banking subsidiaries to give advice to a bidder in a takeover battle whose target has been one of the bank's own clients.

Needless to say, the client under attack is normally furious at what it sees as a breach of trust - the bank's argument that the investment banking subsidiary is acting as an independent entity, behind a "Chi-

nese Wall", cuts no ice. More recently, investment banking habits have been having an even more profound effect on the relationship between banker and corporate

Investment bankers regard all assets in their balance sheets as tradeable. Trading these assets is normally easy. because most of the assets are in the form of securities.

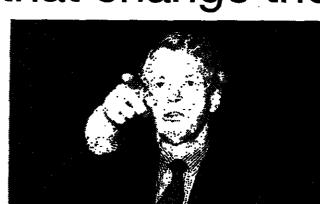

However, only a relatively small proportion of the assets of most banks are securities. Most of their balance sheets consist of loans, either to companies or individuals, which have traditionally not been

In the past, when a bank made a loan to a company or individual, it was in effect contracting to maintain a relationship with the borrower till the loan was repaid. But not any longer. Many banks now want to be able to sell these loans.

The reason for this change is that the worldwide recession has left banks with little spare capital. The ability to trade in loans allows a bank to rapidly adjust the size of its balance sheet to a level best suited to its capital resources.

Over the past decade, three different markets in banks' assets have grown up. Two of these are now relatively well established: the market in bank loans to less developed countries and the market in mortgages and consumer loans, repackaged as securities.

However, a third market is

Pen Kent: selling the debt may impede attempts to rescue a company

which is having a very pro-found effect on the traditional relationship between banks and their corporate clients. This is a market in distressed corporate debt, or loans to companies which are experien-

cing financial difficulties. Until recently, when a company had financial problems, it would normally expect to negotiate a debt restructuring with the bank or banks which had originally granted its loans and which it felt it knew well.

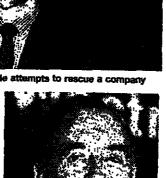

However, a number of companies in difficulties have recently discovered - to their shock - that their banks have sold their loans to other financial institutions. In the past year, this happened to WPP, the advertising group, and to Isosceles, the supermarket

Such sales can complicate the process of negotiating a debt restructuring, because the buyers of the debt may need time to get to know the company and understand its prob-

On the other hand, proponents of the new market argue that there can be a benefit stemming from such debt sales. A company's original bankers may have become so disenchanted with a troubled company that they will refuse to grant any new credit to that company. A new institution may, however, be rather less dogmatic.

The market developed first in the US five years ago. M J Whitman, one of the leading brokers of such debt, estimates that distressed US corporate debt with a face value not to be confused with its sale value - of \$5bn was traded in 1992, double the level of the previous year.

"This year, between \$5bn and \$7bn is likely to be developing, the existence of traded," said Mr Peter Lupoff,

Lord Alexander: will not rule it out who is in charge of corporate debt trading at the firm. When trading first began, the sellers were typically

branches of non-US banks or smaller regional banks. They tended to sell their participations in syndicated loans granted to those companies with which they did not have a close relationship. However, over the past year some of the biggest US banks.

including Citicorp, Wells Fargo

and First Chicago, have started to make such sales, particularly of loans to property companies. "Some of the sellers in the past year were the agents for loans," said Mr Lupoff. In other words, banks have sold their interest in loans to companies even when they knew the com-

pany quite well. Citicorp has formally recognised that banks have now acquired a trading psychology by producing an index of bank loans to companies, which in theory allows banks to compare the return of making loans to companies with the returns available from investing in securities.

The leading brokers in the debt, Whitman, Goldman Sachs and Oppenheimer, are now trying to develop the market in the UK. There is also one new UK firm, Klesch and

The UK market is still small. Like the US market in its early days, sellers are often foreign banks with branches in London - and they have tended to sell their debt participations in companies with which they do not have a close relationship. But there have been trades

in the debt of several companies in difficulties, including Maxwell Communications Corporation, Brent Walker, Isosceles, WPP, Guinness Peat Aviation, Eurotunnel. Heron and Polly Peck.

UK banks say they are hesitant to enter this market though most are considering it. "It is not something we would rule out," said Lord Alexander. chairman of National Westminster Bank, the UK's second big-

An additional factor in the slow growth of the market has been that UK investment institutions, unlike their US counterparts, have not yet emerged as very enthusiastic buyers of the debt. However, they are being lobbied intensively by the brokers.

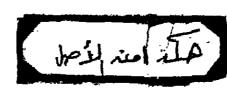

One reason for believing that a UK market may eventually take off has been the changing attitude of the Bank of

Its associate director, Mr Pen Kent, said in a speech last November that he was concerned that selling the debt of a troubled company could impede attempts to rescue it. "Selling debt in response to news that a company is in difficulty is not in keeping with one of the basic tenets of the London Approach [which is a Bank of England sponsored code of conduct for banks involved in rescuing a company]."

However, in June his tone had changed. He said that the sale of bank debt, especially property loans, to new investors, had "the potential for a beneficial and productive effect for a company in difficulties"

New investors might have expertise relevant to the company or might be able to take a longer term view of the returns to be made from the debt than the company's original bank-

Much as companies may feel uneasy at the thought that they may not be able to decide from which institution they borrow, the new market is probably here to stay.

its use should become obsolete

because the Treasury has

already promised to introduce

foreign income dividends.

These will help companies

with foreign profits to pay divi-

dends out of those profits with-

out incurring an ACT charge. However, the ABI is worried

that companies will issue them

repeatedly, in effect turning

them into a rolling rights

issue. A significant expansion

in the number of outstanding

shares raises questions about a

Scrip option plan has a short shelf-life

THE ability of Britain's corporate financiers to twist new financing techniques to the disadvantage of the taxman is legendary. But the problem of surplus Advance Corporation Tax for those with too low a corporate tax bill to offset has had them stumped

Thus, there was a certain frisson in the City when BAT Industries, long dogged by unrecoverable ACT, announced its advisers had come up with a plan to tackle it. The plan, advanced by Bar-clays de Zoete Wedd, seemed

BAT would offer to pay its shareholders their usual dividend in cash, incurring ACT on all those payments. But those who elected to take their dividends in shares, which do not attract ACT, could earn a dividend worth up to 50 per cent more. From the deal, BAT would save £97m in ACT charges and another £334.7m assuming that all shareholders

took scrip instead of cash. Even better, BZW told shareholders that they could achieve the best of both worlds, getting cash worth almost 50 per cent more than the dividend. BZW would operate a kind of resale facility, offering to buy - at no dealing cost - the extra shares at a discount to the market of only 5 per cent. Shareholders who exercised the scrip option but then sold the extra share allotment would still be better off than those who chose the initial ACT-attracting cash div-

So attractive was the techmique that seven other big UK companies quickly announced plans for similar techniques. But then, things began to go sour. Just why they did so is a complicated story but ultimately, BZW acknowledges, enhanced scrip dividends are a virtuous product with a regret-

tably short shelf-life. Mr Amir Eilon, managing director, corporate finance, at RZW and one of the architects of the structure, says the group began to think of ways to help companies around the problem of surplus ACT in 1991. Initially. BZW toyed with the idea of issuing A and B class

aroline Burton: 'I'd like m dividend in cash, thank you

attract ACT and the other not. But previous experiments with that structure, along with the general distaste among investors for different classes of shares, led it to abandon that

The enhanced scrip dividend structure, he says, is blindingly simple by comparison.

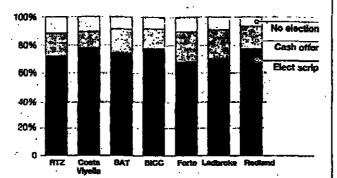

The problem with scrip dividends is that shareholders do not like them. In Britain, taxexempt institutions such as pension funds find them unat tractive because they are able to reclaim 20 per cent of the ACT paid by the company, so that the return on a cash dividend is even higher than it appears. Thus, scrip dividends have a traditionally low take-up of under 5 per cent.

The sheer volume of the BAT offer made it attractive to the institutions and overcame their initial distaste for new share certificates.

But after the initial euphoria, doubts began to creep in. The Association of British Insurers, one of the UK's most influential shareholder groups, said it was concerned about "These are like ice-cream," says a member of the ABI's investment committee. "They glisten at first but after they've sat in the sun for a while they don't look so

The ABI view is that, as a one-off arrangement to avoid unrecoverable ACT, the use of enhanced scrip dividends is to be welcomed. But by next year,

Scrip v cash acceptances

company's ability to finance After all, extra shares over time may force companies

either to restrain their dividend increases or, worse, to But BZW says that companies need only earn a 15 per cent return on capital to ensure that the dividend stream is Shareholders are also con-

cerned that the use of scrip could evolve into a kind of "fudge" for companies which are short of the cash necessary unwilling to say so publicly. Among the companies which issued enhanced scrip divi-dends was Forte, which also announced a cut in its divi-

"If I want a company's shares I'll go out and buy them," says Ms Caroline Burton, director of investment management at Guardian Royal Exchange. "In the meantime, I'd like my dividend in cash, thank you very much." However, the greatest controversy over enhanced scrip dividends is not over their efficacy but about the profits to be derived from advising companies on their use.

Swiss Bank Corporation caused a commotion when it saidlt would repurchase extra shares issued as dividends by BAT at a discount of only 2 per cent to market price, undercutting BZW's 5 per cent discount. SBC said it could offer a

smaller discount after applying an options model analysis to the offering and realising that the risk to the buyer justified a much lower fee. In defence of the wider discount it had sought initially, BZW said that, at the time, it had no idea what the take-up of the enhanced scrip would be and therefore, it judged the risks to be greater. SBC, it said, made its price offer with the benefit of hind☐ Profile: 3i

Europe's largest venture capital oany. Slightly shopsoiled from standing in the display window for the past two years but still a basically sound busi-

WHAT is to happen to 3i, the grandfather of the British venture capital industry, after its clumsy attempts at a public flotation? Continuing uncer-tainty about the future of the let alone in Britain - of equity and long-term loan finance to small businesses is a cause of some concern.

The repeated postponement of the planned flotation has dented the company's image and done little for staff morale. More important, small and medium-sized companies desperate to raise extra funds to finance growth may find that a key player is distracted from its primary business.

3i's problems came to a head in April when the banks which are its present shareholders announced an indefinite post-ponement of the flotation. Apparently prompted by a change of heart by Barclays and National Westminster Bank, which together own 41 per cent of 3i, shareholders said they would wait until the

economy improved. Mr Alan Wheatley, a former

Price Waterhouse brought in as chairman to spearhead the flotation, stepped down.

There are now three main options open to 3i and its shareholders. They could: Maintain the status quo. Pressure is off the banks, particularly Midland which is now part of HBSC Holdings, to raise funds by disposing of their

But while the banks might not be so desperate to raise money by the sale of 3i, the company itself is keen to top

In recent years 3i, like the rest of the venture capital industry, has shifted its emphasis to larger deals

up its finances. It had planned to raise new money at the time of the flotation and is currently testing the market to see if it could raise a \$300m-\$400m

This would, however, leave a fundamental problem unre-solved: the big banks all have their own competing venture capital activities. In recent years 3i, like the rest of the venture capital industry, has shifted its emphasis to larger

deals, bringing it into direct

senior partner of accountants competition with the bankowned venture funds. If 3i reemphasised its focus on smaller deals, its shareholders

would not complain. ■ Allow one of the banks, or another financial institution. to buy 3i. National Westminster is believed to have expressed an interest at one stage while 3i recently considered the possibility of a link-up with Charterhouse Develop ment Capital. But the banks would be unwilling to see the fruits of 3i's long-term investment activities fall into the

Allow a large pension fund investor or group of investors to acquire 3i. For most, this would represent no conflict of interest with existing activities and it should not provoke the jealousy a bank sale would. However, the poor returns from some of their investments have made pension funds cautious about venture capital investments over the past two years and there might not be many takers.

3i is in an unhappy position for a company which depends on making long-term investments. While uncertainty about the flotation persists, attention will focus on its own short-term prospects.

tial tender offer for a 25 per cent stake in Kwik Save. Rowan Morgan, retailing analyst at Nikko Europe, says: "Over the last five years Kwik Save has produced the fastest earnings growth rate in the sector with the exception of Argyll. The quality of growth has been high, based upon strong like-for-like sales growth and organic store development rather than being dependent upon boosting gross

margins." Net gearing at the last bal-ance sheet was a mere 2.2 per cent and the group is effec-tively ungeared. The Jardine Matheson empire may have hit on a controversial method of taking control of companies but if it continues to produce the sort of results unveiled at Kwik Save it is unlikely to be stopped.

Roland Rudd

CORPORATE FINANCE 6

FINANCING the transition from central planning to privatised market economies is all about creating capitalism without capital. Not surprisingly this unprecedented task has spawned some unprecedented "solutions", not all of them very healthy.

A recent study by Salomon Brothers of New York, for example, found that mutual default on payments between enterprises was the main source of financing economic activity in Russia during the first half of 1992. According to the June edition of Salomon's Russian Economic Issues, inter-enterprise debt rose 82fold from Rbs39bn on January 1 to Rbs3,200bn on July 1 last

This uncontrolled explosion of funny money made a mockery of attempts to moderate inflation and obliged the government to permit the central bank to issue a surge of new money or face the consequences of forcing 90 per cent of industry and the financial

sector into bankruptcy.
But the decision to print more money did nothing to help the grass-roots transformation of the economy which is taking place, but virtually in spite of government actions. Nearly half the new credits were used to prop up the dis-credited collective farm and agro-industrial sector and

much of the remainder to sustain the military factories, the study concluded.

The growth of unregulated inter-enterprise debt is a problem throughout the former communist bloc and will remain so until a combination of bank reform, bankruptcy legislation and privatisation, separates out the hopeless loss makers from the basically sound enterprises which can be re-financed, down-sized where necessary and re-floated.

But this process is gathering pace, starting with the three central European states -Poland, Hungary and the Czech Republic. These are the most advanced along the path to privatisation and structural reform and the most attractive to foreign investors. But similar moves, albeit at an earlier stage, are also taking place in Bulgaria, Romania and the Bal-

Despite the low level of average incomes the past three years have seen a widening of income differentials and a growth of personal savings which has surprised most observers. After an initially hesitant start the mass privatisation programmes pioneered by former Czechoslovakia and Poland have also been enthusiastically received, turning millions of citizens into smallscale shareholders at an initial cost of a few weeks' wages.

Anthony Robinson assesses the capitalist revolution in eastern Europe

Structural reform gathers pace

Volkswagen have committed DM7bn to Skoda in the Czech republic

The foundations of a domestically-generated investment capability are thus being laid. But increasingly, economic policy-makers and advisers are emphasising the crucial importance of transforming primitive Soviet-style banking systems into effective conduits for the finance of industry and commerce. The central European states in particular are also forging ahead with the development of pensions funds, insurance companies and other institutional investors, hitherto totally lacking.

Much still has to be done on the banking front. But heavy investment in personnel training and on new equipment and

premises, coupled with much foreign advice and extensive remodelling of banking laws on European Community lines, is changing the face of what is becoming an increasingly privatised and modernised sector.

still transacted by the big state-owned banks. But many are earmarked for privatisation and dozens of smaller private banks, unburdened by the bad debts of the past, have sprung up, although most remain small and under-capitalised. The World Bank and the

Most banking business is

European Bank for Reconstruction and Development (EBRD) have singled out the banking system as a priority for reform

throughout the region, with both helping various schemes to re-finance balance sheets stripped of inherited bad debts. The EBRD, for example, recently took a 28 per cent stake in Poland's Wielkopolski Bank Kreditowy, the first of nine hitherto state-owned com-

mercial banks hived off from

the central bank three years ago to form the basis of a new. private, commercial banking The much-criticised EBRD has been most active in Poland where more than 100 investment projects are in the pipe line. Most are for fledgling Pol-

Big German investment in the Czech Republic, spear. headed by Volkswagen, has brought a wide spread of col. lateral investments by component companies and similar developments are taking place in Hungary, where Suzuki is a rare Japanese investor, and Poland where Fiat's commitment is also drawing in substantial collateral investment.

Heavy investment by the multinational car companies seeking low cost production facilities and potential market growth is mirrored by a wide spread of multinational consumer goods corporations They are bringing the joys of western-style detergents, tobacco, processed food and drink to the whole of central and south-east Europe, with the exception of war-torn former Yugoslavia which faces economic meltdown if the ethnic conflicts are not resolved.

THE departure of flagships Hongkong & Shanghai Banking Corporation and Jardine Matheson before the Chinese assume sovereignty in 1997 annears to symbolise the international image of corporate Hong Kong, but the reality

could not be more different. Far from struggling to lower their exposure to Hong Kong, most of the colony's businesses are expanding their investment portfolios in Hong Kong and in the land of its future masters.

When Britain and China signed a joint declaration sealing the fate of Hong Kong as a future Chinese territory, a corporate exodus was widely

Jardine Matheson seemed to set a trend in 1984, when it moved its domicile to Bermuda, tacitly implying a lack of confidence in the post-1997 administration. It looked as if other companies might restructure asset portfolios in favour of safer havens, such as North America and Europe.

Indeed, some companies have dabbled overseas in prop-

erty developments in Canada. side the cosy borders of the colony has been extremely poor, while those who stayed

Mr Stephen Clark, director of Anglo Chinese, a local corporate finance house, says there will be no external flood of capital. "If there was going to be a move for the door, it would have already hap-

One of the only Chinese conglomerates to make a signifi-cant push outside Asia is Mr Ka-shing's Hutchison Whampoa. In 1987 it purchased a 43 per cent stake in Canadian oil and gas producer Husky Oil - the investment was solit between Hutchison and its associate Hongkong Electric. It followed this with the expansion of its telecommunications business into the UK in the early 1990s.

Husky contributed write-offs of SHK2.2bn for Hutchison in its 1991 and 1992 accounts.

California and Australia. But investors who have moved out-

have prospered.

ened," he says.

And if its UK telecommunica-

Patriotism seems to pay

as is believed, enormous losses would result. Warburg Securities estimates that these two investments will reduce earnings between 1988 and 1995 by \$HK4.5bn, even assuming

there are no provisions against the telecommunications business There was little surprise, therefore, when Mr Li announced last year that Hutchison would refocus its attention on Hong Kong and

China. Hong Kong Chinese companies have long understood that those who cash in Hong Kong businesses to pay for overseas investments will be deemed unpatriotic and unsuitable for favourable treatment by a post-1997 regime.

Expectations of asset dispos-

the four main expatriate-managed companies, Jardine Matheson, HSBC, Swire Pacific and Hongkong Telecom (HKT). Mr Stephen Brown, research

'If there was going to be a move for the door, it would have already happened'

Hong Kong businesses are expanding their investments in the colony

director of Asia Equity, says: "Only two of the British-style Hong Kong companies have decided not to play the decolonisation game, and have instead diversified overseas through acquisitions.

HSBC has finalised its longawaited takeover of Midland and its move into the international banking arena. Jardine, meanwhile, has completed its restructuring as a primarily a London listed company: recent expansion has focused on the fidence in the future of the Hong Kong special administrative region. By contrast, its competitors have made every effort to build up their Chinese

guanzi or connections. Swire Pacific and HKT have recognised the changing environment by offering shares to China International Trust and Investment Corporation (Citic), the local offshoot of the Beijing investment corporation. Citic Pacific, the largest China-controlled listing in

per cent of Swire's airline Cathay Pacific and 12 per cent of HKT.

At the same time, Swire and HKT have expanded their operations across the border into China. Swire Properties has cemented the relationship by launching a HK\$2.85bn property development with

Hong Kong offers investors a high growth economy and a cosy, tight-knit business community. Insiders start with a significant advantage, but this is not transferable.

Most overseas investments have been mere extensions of a domestic strategy. In 1988 and 1989, for example, Regal Hotels, New World Hotels and Wharf Holdings each purchased US groups - Aircoa, Ramada and Omni respectively. The total cost of these hotel investments was US\$535m, and while all were expected to benefit from existing operations, they have proved to be ill-timed pur-

Dickson Poon's more recent HK\$750m purchase of Harvey Nichols was also a strategic decision to acquire another brand name for Dickson Concepts' luxury goods distribution business, rather than just a real estate gamble.

These investments pale by comparison with the level of capital flows between Hong Kong and neighbouring Guangdong province. Mainland Chinese investors have made substantial inroads into the Hong Kong property and stock markets. Over the next vear, nine mainland registered state enterprises will be floated on the Hong Kong stock market, further emphasising the link.

In the other direction, Credit Lyonnais Securities estimates that the average Hong Kong listed company has made two investments in China, and the

jects (including the investment by the joint venture partner) amounts to HK\$521bn.

All the leading corporate finance houses now have China teams, pointing up the irony of Jardine's lone push towards internationalisation, given its historical background as the Princely Hong and pillar of the colony's business community.

Jardine has had some overseas successes, notably through its supermarkets subsidiary Dairy Farm - which has significant holdings in Kwik Save in the UK and Franklins in Australia. Its stake in Trafalgar House is viewed by many as another

astute move. But as the group's percentage of earnings from Hong Kong declines, so will the levelof its influence. China has already indicated the potential problems this could cause, by setting obstacles to its proposed investment in Container

The state of the s

Who gets what in BT3: provisional allocations

Themaximumnumber of shares an individual is likely to receive in the BT3 sale is 30,000. Only qualifying BT shareholders who applied through share shops can get the maximum, atthough they would have to have applied for at least 100,000. Applicants for the minimum 120, whatever the avenue, are set to be satisfied in full, as are qualifying BT shareholders who put in for up to 600 shares. Full details, Page 16

Rare defeat for Mr Li

MrLiKa-shingand Mr Larry Yung have suffered a rare defeat in the HK\$9.65bn bld for Miramar Hotel and Investment, which has property assets on the Kowloon peninsula. The joint offer made by their companies received acceptances equal to less than 14 per cent of the company. Page 17

Designer doldrums

USfashiondesigner and manufacturer Liz Claiborne has warned of a 30 per cent decline in annual earnings only a day after the unexpected resignation of vice chairman Mr Jay Margolis. The shares have tumbled to their lowest level in several years.

French bond wobbles

Attacksonthefranc have cast a shadow over the French bond market, raising the question of whether the French government will raise interest rates. Such considerations were evident in last Thursday's FFr18bn issue of two-year and five-year bonds. The average yield of 5.95 per cent on the shorter-term issue was higher than expected. Page

Prospective p/e ratio

Thelatestprospective p/e ratio for the "500" index for calendar 1993 is 14.4, according to IBES, the consensus estimates service (last week: 14.5). This compares with an IBES estimated p/e for the "500" of 19.0 (19.2) for calendar 1992. The official FT calculation of the historic p/e, based on the latest reported earnings, is 18.91 (19.10).

Whatever happened to Sid?

HardiyaUKprivatisation goes by without a minister citing the virtues of Britain's share owning democracy. Yet with most of the big privatisations com-pleted, the evidence suggests that the government has falled in its wider share ownership objectives.

Investors cool on 'China

By Simon Holberton in Hong

THE HONG KONG portion of a HK\$2.9bn (\$370m) capital raising for Shanghai Petrochemical, the largest of nine state-owned Chinese companies to be listed in the colony, was only 1.77 times subscribed.

In Hong Kong, where new issues are usually many times subscribed, local investor response was seen as disappointing. However, the issue would have fared worse had not the two issuing houses subscribed for half the shares.

Mr Wang Jiming, chairman of Shanghai Petrochemical, said: "The Hong Kong offering would have been subscribed 1.24 times without the applications from Merrill Lynch and Peregrine Capital."

Shanghai Petrochemical is offering 1.68bn H shares - 30 per cent of the company - split equally between Hong Kong and the rest of the world. The subscription price will be estab-lished by a tender in New York. The company's advisers have set a guide price of between HK\$1.55 and HK\$1.74 a share.

Since the company came to the market on July 6 concerns about the Chinese economy have lessened the appeal of "China stocks". Equally important, investors found the pricing of Shanghai Petrochemical too

aggressive.

Most new issues in Hong Kong are floated at six to eight times prospective earnings - leaving plenty in it for "stags". Judging by the guide range, Shanghai Petrochemical is priced on a prospective p/e of 12.3 to 13.8.

Standard Chartered and Wardley backed out from underwriting the Hong Kong portion of the

The "failure" of the Hong Kong float drew sharp criticism of the colony's financial community by Mr Philip Tose, chairman

He accused his fellow merchant bankers of not understand-ing that underwriting was about accepting risk. He also called for Hong Kong's system of pricing new issues to follow US practice where tenders are used. He said the issue was seeing

heavy demand internationally, but "because of the way it has to be offered in Hong Kong we got the tail wagging the dog." Guangzhou Shipyard Interna-tional, owned by the People's Liberation Army, plans to list in

David Lascelles explains why UK electricity companies are venturing abroad

Two and a helf years after they were privatised. Power lines unleashed Power lines unleashed from home base

ket, and placed PowerGen among the top 10. This, Mr Ed Wallis, PowerGen's chief executive says, helped persuade him to pursue opportunities abroad.

Both NP and PowerGen are keen to play down the risks in

Mr Graham Hagley, NP's man-aging director for international business development, says the company intends to build a mixea oversea investments in which those with high risks and high rewards are balanced by others which are less exposed financially, but produce lower returns.

NP's recent \$160m acquisition of TEVCO, the owner of seven home. Its major projects so far

power plants in the south eastern US - its largest so far - falls into the second category, and provides "ballast" for higher risk ventures in areas such as the Indian subcontinent and the Far

One of these involves NP teaming up with Ashok Leyland of Madras to build a 1,000MW coalfired station in Andhra Pradesh at a cost of £1.3bn. "Our concept have long-term operating responsibility," says Mr Hagley. NP could contribute expertise both in the construction and manage-

ment of the project. PowerGen is sticking closer to have been in Portugal, where it is participating in a gas-fired power station, and in eastern Germany where it is negotiating with other partners to buy a power station and the nearby coal mine which supplies it.

We're not running a race," says Mr Wallis. "We're being a bit sniffy, looking for quality investments. We're telling our shareholders that we're limiting we have the management skills." PowerGen is unlikely to go into either the US, which is too competitive, or India because of the risks, but it is looking at the Asean states and China.

In particular he hopes that

bamboozled by over-optimistic profit forecasts, or fail to do their homework properly. "There are often skeletons in the cupboard," he says. Analysts have said that Power

Gen's project in Portugal could run into trouble because the power station was started before the government reached agreement on how to ship in the gas. But Mr Wallis said the delay on gas was foreseen and his com-pany is not exposed financially.

ne of the precautions that National Power took before embarking on its Indian project was to secure a guarantee from the Indian government that it would receive all the payments and dividends due

All of which explains why investors are cautious. Mr Alex Milne, electricity analyst at Barclays de Zoete Wedd, says that foreign markets are a "reasonable area" for UK generators to look at, given their technical expertise and financial strength.

He applauds their measured approach, but in such a new market there is little way of judging how successful their investments will be. "You have to take it on trust that they are not going to shovel a lot of money down a big

he European Community has just woken up to a crisis in its public

nomic policy committee, net general borrowing by EC governments has risen steadily to more than 6 per cent of national income this year, com-pared with 2.7 per cent in 1989. During the same period, state spending has jumped more than 5 percentage points to a record 52 per cent of gross domestic product, and the share of tax and social security contributions has risen by 1.5 points to almost 46 per cent -

also a record. But increasing taxation is no easy matter. No-one likes paying taxes at the best of times. Moreover. the EC's political leaders are nearly all unpopular. Higher taxes can easily translate into defeat at the

In this uncertain world, Mr Ken Messere, until 1991 the head of the fiscal affairs divi-sion of the Organisation for Economic Cooperation and Development, has produced a valuable guide on tax policies in the main western industrial countries.

His Tax Policy in OECD Countries: Choices and Conflict* offers no magic cure. But drawing on 30 years' experience with tax policy matters and 20 years as the OECD's top tax expert, he provides a mine of information about where governments have gone wrong and gives valuable clues as to what they should and should

Mr Messere is no instinctive tax cutter. He can barely conceal his distaste for the antics of politicians in the 1980s, who (especially in Britain) cut taxes for ideological reasons and argued that the changes would dependency of any major

History lesson on how to sible tax increases. The problem is daunting. According to the EC's economic policy. According to the EC's economic policy.

enhance economic per-

With the advantage of a long perspective and an erudite approach to taxation that takes Younger, St Thomas Aquinas and the November 1992 Cathoa dim view of the happenings of the past 30 years. "Any watcher of revenue developcountries' tax policies over

in the observations of Pliny the lic Church Catechism, he takes ments can hardly fail to be struck by the irrationality of

most of the period."

One irrationality, in a sup-

industrial country on revenues from personal income tax only 7.5 per cent of GDP in 1990. The reasons include antiquated collection methods and high thresholds that exempt nearly half the population from paying tax. Against this, it relies a great deal on social

security contributions.

Germany, which is struggling with huge deficits caused by unification, has the lowest standard value added tax rate in industrialised Europe at 15 per cent, and VAT and income tax ratios that are below the

Economics Notebook By Peter Norman

posedly interdependent age, has been the failure of most OECD governments to pay attention to tax policy changes made by other governments to

solve similar problems. Another is the way that the total tax ratio, that is the ratio of total tax revenues to GDP, has fallen in many countries since the mid 1980s without a corresponding fall in government outlays.

This trend has been accompanied by a generally welcome convergence of industrial country tax ratios. But great differences remain in the way governments raise tax revenues. This is especially true of the

Germany, France, Italy and Britain. • France has the lowest

four biggest EC member states:

 Luropean average.
 Italy, on Mr Messere's reckoning, has no pronounced tax eccentricity. But its tax administration is notoriously defi-

 Britain, whose government so prided itself on tax reform in the 1980s, has a poor tax policy record in Mr Messere's view. It has the narrowest VAT base in Europe, zero-rating such items as foods, new dwellings, books, children's clothes and sewerage services.

UK tax policy has been influenced far more than in other states by party political preferences, because Britain's "first past the post" electoral system has given the executive arm of the UK government more power to change taxes than governments on the continent. Some consequences for taxation have been bold, innova-tive and rational: Lord Law-son's 1984 reform of corpora-tion tax falls in this category. Others such as the poll tax or the selective employment tax introduced by Labour in

1966 were simply "crazy", according to Mr Messere. Nor is he very enthusiastic about the council tax. He notes that it combines various features of property tax, a household tax, a poll tax and an income tax, "which has never been contemplated by any other OECD country".

Differing tax structures among EC member states may help explain their varying economic performance. For example, France's greater depen-dence on employers' social security contributions to provide state revenues may be one reason why French unemployment stayed so high in the 1980s and is now rising very

sharply in recession.

But the differing structures could also present an opportunity to governments that now must think about raising tax to eliminate deficits. Peer group example and pressure are already being used to soften up electorates for potentially pain-

ful cuts in welfare spending. Ironing out differences in tax structures among EC states could provide a suitable cloak for European governments wishing to boost revenues in the 1990s. Handled carefully, the process could even smooth the competitive playing field for businesses and individuals, promoting the single market.

Clearly, much would depend on how the additional tax revenues were raised. Mr Messere points out that it is sensible to diversify sources of increased tax revenue to reduce taxpayer discontent. This may seem obvious, but it has been ignored by many governments.

T&N cited as latest suitor for Lucas

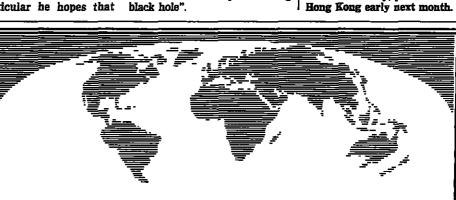

T&N, the British motor components and engineering group, is understood to have approached Lucas Industries to discuss a possible friendly link-up, but it has been rebuffed by the aerospace and motor components manufac-

T&N declined to comment yesterday on suggestions that it was seeking an agreed merger with Lacas. Mr Mark Herbert, corporate communications manager at Lucas. described the reports as "rumour and speculation".

Takeover speculation con-cerning Lucas has been rife for some time. Earlier this year BTR, the industrial group, was strongly rumoured to be interested in acquiring the company. More recently Siemens, the German engineering and electronics company, has been cited as the most likely bidder. A merger of T&N and Lucas would create a group with sales in excess of £4bn. T&N is thought to have expanded an original plan which intended a merger of its brake-linings business with that of Lucas.

Lucas is seen by many in the City as lacking strong management. It has failed to appoint a new chief executive, despite a lengthy search, and a new non-executive chairman to succeed Sir Anthony Gill, who is scheduled to step down in

Another demoralising factor has been its poor profits per-formance. In March it announced pre-tax profits of 25.2m on turnover of £1.29bn for the six months to the end of January.

(SOVAC is a "société anonyme à Directoire et Conseil de Surveillance" organised and existing with limited liability under the laws of the Republic of France with the registered number B784393340 and has the status of a bank, and is therefore considered as an "établissement de crédit".)

Bid for William Hill still under consideration

By Maggle Uny

BANKS OWED £350m by the William Hill betting shop chain, owned by Brent Walker. are still considering a possible £360m bid from a consortium of institutional investors put together by SG Warburg.

Sir Keith Bright, chairman of the troubled property and leisure group since January, is understood to believe William Hill is worth significantly more than £360m, and that the bid is not in the interests of all creditor banks, owed over £1.3bn.

A sale at that price would require another balance sheet write off for Brent Walker, and further reduce its chances of servicing other debt.

However, the William Hill banks have a right to pursue the bid and could see loans repaid in full if it was accepted.

The banks looked at an outline bid at an otherwise routine meeting last Friday called to discuss options for the refinancing of William Hill, which must go through by March 1 William Hill's loans are "ringfenced" from Brent Walker. The Warburg bid, on behalf

of investors Mercury Asset Management, Electra, Morgan Grenfell and Midland Montagu, is far from being finalised.

Under the William Hill loan agreement the company is bound to pursue any serious offer made. The banks have the right to vote on such an offer. If a vote goes against a bid, any banks which were in favour of accepting gain a higher security ranking for their loans than those voting against. This would effectively make their loans safe.

But a higher sale price - perhaps through a flotation would generate surplus cash for Brent Walker. There is a conflict since banks which have lent to Brent Walker represent 57 per cent of the loans to William Hill. Therefore, those banks which are in both syndicates could block the bid, but if they did the other William Hill banks' debt would

gain security over theirs. Brent Walker's advisers believe a flotation, taking advantage of the current strength of the new issue market, could raise more for William Hill, although suggestions of a £500m value are regarded as "optimistic" by some.

Another attraction of a flotation would be that Brent Walker could retain a stake in William Hill which would be worth more in future years if its profits recover as expected.

Enlarged net fails to make a big catch

Roland Rudd on the apathy of small investors to the government's plan for wider share ownership

goes by without a minister talking about Britain's share owning democracy. The government's third and last sale of BT shares is no

exception. In the run-up to the trading of the partly paid shares, which starts today, Mr Stephen Dorrell, financial secretary to the Treasury, frequently cited the flotation as evidence of the government's commitment to widening and deepening share

The government justifies wider share ownership on the basis that it involves individuals directly in the economic success of UK companies as well as allowing them to build up security for the future. On that basis, say government advisers, the retail investors will today be pleased to have bought their shares and should have the added satisfaction of

making a small profit.

Yet with most of the big privatisations completed the evidence suggests that the government has failed in its

objective. The government points out that the number of small shareholders has increased from around 3m in 1979 to peak at 11m in 1991, although it has recently fallen back to 9.26m. which government advisers blame on the recession. In percentage terms the proportion of the adult population owning

NEWS DIGEST

ARDLY a privatisation shares is around 21 per cent compared with just 9 per cent

> Institutions, however, account for a bigger percentage of shares in privatised companies than ever before. According to the partly-government funded ProShare, which tracks share ownership, pension funds and insurance companies hold more than half of all shares in privatised companies compared with 20 per cent held by small share-

Mr David Jones, chief execu-tive of ShareLink, the telephone-based stockbroker which is about to float on the Stock Exchange, says the problem is of the government's own making. He believes concepts such as "share owning democ-racy" and "widening and deepening share ownership" are not sufficiently defined by ministers for the public to know whether they have succeeded

gests that retail investors currently have a greater appetite than ever to buy and sell shares. This is borne out in ShareLink's pretax profits, which rose from £1m to £3.1m in the year to March 31 without any privatisations or big share

It was the privatisations that the government hoped would

bring about a cultural change in share ownership. But there seems to be a reluctance by investors to go on and buy shares in other companies after taking part in a privatisation issue. ProShare's figures show that 72 per cent of all retail investors hold shares in only one or two com-

TMax 30,000 ± Max 20,000

The government has sought to rectify this by extending the concept of share shops first used in the 1991 BT sale. Ministers hope that many retail

investors who buy shares in

BT3 will be enticed by their

broker, building society or bank, to buy shares in other

decision to extend the number

Mr John Cobb, chairman of the Association of Private Client Investment Managers and Stockbrokers, describes the

around 150 as a "significant

step forward". Many of the share shops. however, are less enthusiastic. Mr Tony Vine Lott, chief executive of Barclays Stockbrokers, says: "The share shops have not been adequately put across by the government or its advisers." Of the 1.66m people applying for shares in BT3, 978,000

with the Share Information Where the government has had more success is in its efforts to entice retail investors to buy shares in a privatisation issue when there is little possibility of making a big profit on

the first day of trading. Less than 10 per cent of the 1bn shares bought by retail investors in the last BT sale were sold during the first month of trading. That compares with more than 35 per cent of shares sold in the regional electricity companies in the first month of trading. Mr Neil Stapley, managing director of NatWest Stockbrokers, says the Treasury's policy of tight pricing has eliminated the possibility of "stagging", whereby investors only bought shares in priva-tised companies to sell on the

first day of trading. The chances of making such a profit on BT have been virtu-

of share shops from eight to ment, notwithstanding the retail investors' 10p discount on each of the three instaligoduc

The majority of retail investors buying shares are expected to remain long-term holders of BT. After the initial privatisation of BT in 1984 the telecommunications company had 2.1m small shareholders This fell to around 1m four years later. Following the secdecided to go through a share and sale of government shares shop as opposed to registering in 1991 the number of individual shareholders in BT rose to 2.6m. This has recently fallen

> But the rate of attrition is slow compared to the early privatisations. British Aerospace, for example, one of the first companies to go public in 1981, attracted 26,000 retail investors, which slumped to just 3,000 soon after the sale.

> his is success of a kind, but it is not what the government hoped for when it embarked on its wider share-ownership campaign in the eighties.
> When all the razzmatazz of

> today's flotation is over the government still has to persuade hundreds of thousands of BT shareholders to buy and sell shares in other companies. The evidence to date sug-

gests that BT3 will not halt the inexorable slide in the proportion of individuals owning ally eliminated by the govern-

Arlen to seek £7m via rights

ARLEN, maker of fluorescent control gear and accessories, is raising substantial funds for development and reduction of indebtedness with the backing

of Fortress Trust. Fortress will underwrite a significant part of 1-for-1 rights issue by Arlen at 21p per share to raise some £7m gross. If Fortress does not acquire 29.9 per cent of the capital through rights renounced or underwriting of shares not taken up. then it will subscribe directly for shares at 23.5p as will holding. That could raise up to a further £2.4m.

The directors of Arlen have noted the recent movement in the share price - on Friday it rose 7p to 35p. They say the rights at 21p was agreed against the background of the quote of 14p when discussions commenced in March until early May, when the share price began to increase.

Mr Greville Howard, chairman of Fortress, and three of his non-executive colleagues, will become directors of Arlen.

Evans & Price

Industrial Metal Products Corporation, a Michigan-based machinery group, has taken an 80 per cent stake in Evans & Price, the Tamworth-based spe-

cialist machine tool builder, for

an undisclosed amount. Evans & Price has marketed micro-finishing machinery built under license from Impco for the past 10 years, and sees the new relationship as a way to accelerate penetration of the European market.

BISS

BISS, a supplier of computer networking systems to blue chip companies, has been bought out by its management from the parent BICC, the cable and construction group. The deal was worth £7.6m. 3i led and arranged the finance for the MBO and

invested nearly £2m for a stake in the business. Other inves-

tors include Lloyds Develop-

ment Capital, and bank facilities of £2.75m were arranged by NatWest Acquisition Finance. BICC has also retained a financial interest in the com-

BISS was formed in 1989 and is based in Hertfordshire. As well as being involved in designing and installing networking systems, it is active in systems integration, communications software and IT consultancy services.

Business Technology Business Technology Group,

which sells and services photo-copier and facsimile machines, vending and communication equipment, is raising £2.2m net through a 5-for-4 rights issue at 10p per share. On Friday the

shares gained 1p to 16p. The proceeds will significantly strengthen the financial position, reduce further the

indebtedness, and help the

group make acquisitions to

expand the machine base and geographical coverage. The capital will be reorganised into 5p shares, and up to 26.2m will be on offer. Apartglobal and Mr Stephen Evans have agreed to underwrite 11m and 15.17m shares respectively. The underwriting arrange-

ments provide that minimum proceeds will be £1.1m net. Despite competitive market conditions and lower photocopier and facsimile machine sales, the group had traded profitably in 1993. Further cuts in indebtedness had been

PORTMAN Entertainment, one of the UK's longest established independent production companies, has bought Zenith Productions from Carlton Commu nications and Paramount Communications of the US. Zenith and Zenith North.

based in Newcastle, have been on the market for some time. Best known for television programmes such as Inspector Morse and films such as Prick Up Your Ears, they were put up for sale following Carlton's successful bid for the London weekday ITV franchise.

An ITV broadcaster can hold no more than a 15 per cent stake in an independent television production company.

1944. It was restructured a year ago with more than \$5m (£3.3m) of new financing in a deal struck with Television Enterprise and Asset Management, backed by Rockefeller in the US and Robert Fleming. the merchant bank, and Primetime, the independent producer, in the UK.

referred to "a transfer of shares". Mr Bernard Cragg, Carlton's finance director said he was pleased to have found "a suitable home for Zenith so that the company will be able to continue to supply high quality independent programmes to the ITV and other broadcasters".

Bank support for **UK Land rescue**

BACKED by its secured banking creditors, UK Land plans a reconstruction of capital and the raising of £256,000 (\$384,000) to meet that expense through a fully underwritten

This will provide UKL with a "sound financial base" from which it can develop by maximising the revenues from the Elephant & Castle shopping centre in London, its main asset, and subsequently seeking property acquisitions.

The alternatives to the plan are insolvent liquidation, administration or receivership. Every 22 existing ordinary shares will be consolidated into one ordinary of 5p and one deferred of 545p - the latter

will later be cancelled. A total of 5m new ordinaries, or 64.44 per cent of the new capital, will be issued to creditors. Lloyds Bank will be issued 2m, a syndicate of banks will get 2.35m in respect of their secured advances, and unsecured creditors under a company voluntary arrangement will be issued 650,000.

An open offer of up to 2.56m shares at 10p each (33 per cent Portman was founded in

The price of the deal was not revealed, although a statement

of the capital) will be made to shareholders on the basis of 13-for-one. A shareholder with

consolidation and be able to subscribe for 650.

voting capital. Issued capital following the proposals will be 7.76m shares, or 9.6m on a diluted basis. Mr James Grace and Mr Christopher Woodhouse, who are sub-

The existing facility from Bank of Scotland will be converted into a £9m term loan, repayable 1998-2003, and a £2.3m overdraft, reducing over the five years to April 1988. The facilities will be secured by a charge over the Elephant & Castle. Lloyds and the syndicate banks may require Lillybrook, the underwriter, to pur-

to double capacity of Irish plant

By Lousie Kehne

RMC, a fast-growing US manufacturer of computer data storage and retrieval systems, has announced that it plans to double the capacity of its manufacturing facility in Cork, in the Irish Republic.

The expansion, which is scheduled for completion by the end of the year, will create about 120 new jobs in a region that has been hard hit by cuts at other computer companies, including Digital Equipment. EMC's products include data storage systems for use with

IBM mainframe and mid-range computers, as well as Unisys mainframes. Most of the company's reve-

product line, which competes with similar products offered by IBML The company is also an early leader in the emerging

Li Ka-shing: has been forced to concede a rare defeat

Miramar Hotel joint bid lapses

By Simon Holberton in Hong Kong

BEIJING-controlled Citic Pacific and Mr Li Ka-shing's Cheung Kong have conceded defeat in their joint HK\$9.65bn (US\$1.24bn) bid for Miramar Hotel and Investment.

The offer, which lapsed on Friday, received acceptances equal to only 13.7 per cent of the company's shares and 9.2

per cent of its warrants. The result of the bid for Miramar, which owns property assets on the Kowloon penin-sula, was a rare defeat for Mr Li and Mr Larry Yung, head of Citic in Hong Kong.

Henderson Investment, another Hong Kong property group, sealed the fate of the joint bid after it bought a 35 per cent stake in Miramar from its founders and gave little indication that it wanted to deal with Mr Li and Mr Yung.

First Nordic restructuring

KANSALLIS-Osake-Pankki. the Finnish bank, is to restructure the operations of Luxembourg-based First Nordic Bank, Reuter reports from Helsinki. The private banking operations of First Nordic are owned equally by the former STS-Pankki, Norlandsbanken of Norway and Denmark's Sydbank Sonderjylland. They are to be taken over by Sydbank Sonderjylland. KOP acquired STS-Pankki last year.

Auction prospect prompts pause for breath

SOME of the froth came off the recent rise in UK government bonds last week as investors reacted negatively to the announcement about the next gilt auction and indications of continuing fiscal weakness.

In recent weeks gilts have enjoyed a purple patch, with long-bond yields dropping to their lowest levels for 20 years.

The market now seems likely to pause for breath while weighing up the large volume of issues that will be needed to finance the high public sector borrowing requirement for

The Bank of England will on July 28 auction an unspecified amount of stock maturing between 1998 and 2001. It will announce tomorrow the details of the bonds and how much will be sold. Market estimates are that some 23.25bn of securities will be on offer.

The announcement on Friday helped the long end of the gilt market, with yields above the 10-year level continuing their generally downward movement

However, prices of 10-year bonds fell more than 1/4 point on Friday, in reaction to news of the auction and that government borrowing in the first three months of the financial vear rose by nearly a quarter on the corresponding period of

Public borrowing between April and June was £13.2bn. compared with £10.7bn in the same period a year earlier. Many in the gilt market were more interested in these details than in the smaller than expected borrowing figure for June. This was caused largely by

unusually high government receipts, arising from individuals and companies paying their tax bills in June rather than later in the summer.

In spite of the extra cash flowing into the Treasury due to this trend, the PSBR for the month still came out at a high £3.88bn, partly because of a big rise in government spending UK glits yield

Jul 9, 19<u>93</u> Jul 16, 1993 years 20

triggered by high social security outlays due to the reces-

Even with the setback to fortunes of the 10-year stock on Friday, gilts of this maturity showed an impressive rise on the week. The 8 per cent bond maturing in 2003 was quoted on Friday night at 103%, nearly % point up on the previous Friday. Its yield fell to 7.43 per cent from 7.51 per cent a week May, the lowest figure for 26

Longer-dated securities saw a yield fall of a similar scale on the week, while short-dated glits moved sideways as expectations of an early cut in bank base rates all but petered out. Gilts maturing in 20 to 25

years have performed particularly well in recent weeks. Since early May, 25-year bonds have seen yields drop from about 8.5 per cent to 7.7 per cent. Over the same period, yields for 10-year securities have come down from 8.2 per cent.

Assuming inflation data over the next few months are as positive as were the figures last week, it is fair to assume that longer-dated gilts will see a further period of steady price increases. The market was particularly heartened by fresh declining, coming from news that average earnings across the economy rose an underly-

ing 3.75 per cent in the year to

In a further sign of low inflation, wages per unit of output in manufacturing in the three months to May declined by 3.6 per cent compared with the

same period last year. This is the biggest year-on-year fall since the Department of Employment started records in Meanwhile, prices of factory-

made goods for domestic sale rose by just 4 per cent in the year to June, the same as in the year to May, while the year-on-year rise in the retail prices index dropped in June to 1.2 per cent, the lowest figure for nearly 30 years.

The message from these figures is that manufacturing is leading the recovery. There are few signs of any significant build-up in consumer spending, nor of price pressures at the level of wages and retail goods

Supporting these indications, a chairman of a big food company said last week that the business was in a "horrible" state. In contrast, manu-facturing output in May registered its biggest monthly output increase for four years, with production up 1.8 per cent on the April level. The release this Wednesday

of the figures for last month's retail sales volumes will be watched with interest in the gilt market. Prices are likely to rise should the figures turn out

FRENCH GOVERNMENT BONDS

Issues hold up well in face of weakening franc

THE CURRENCY markets sen, international economist at have been casting a shadow over the French bond market, as a series of attacks against the franc have raised the question of whether the French government is prepared to raise interest rates to defend the current parity within the European exchange rate mech-

Such considerations were evident in last Thursday's FFTI8bn bond issue. The issue of two-year and five-year bonds went reasonably smoothly, although the shorter-term issue reflected anxieties about the currency market.

It saw an average yield of 5.95 per cent, which is higher than expected and compares with 6.16 per cent at the last auction in June. The five-year bond saw an average yield of 6.13 per cent, compared with 6.36 per cent at the June auction

In general, however, bond analysts said that French issues had held up reasonably well in the face of the weakening franc.

Spreads on French 10-year bonds over German bunds narrowed from 24 points to 14 points over the course of the week while the short-term end of the market staved relatively

"We were seeing increased buying interest in French bonds at the end of last week."

Midland Capital Markets.

She says that with French yields back above German ones at virtually every maturity. there is again the attraction of capital gains on French bonds. But this attraction may be short-lived if the current turbuience within the ERM forces the French government to resort to an increase in interest

'It might make sense to issue more bonds than they need now. It is likely to be more difficult later

"If the speculators really try and prise the franc out of the ERM, which is possible, then the French government isn't going to have much choice," said one analyst.

Inflationary prospects in France will be one factor preventing yields slipping below those on German bonds again in the near future.

Consumer price statistics for June, released last week showed stable inflation, the result of falls in the prices of food and oil, but the impact of increased indirect taxes introduced in July - including a rise in petrol taxes - suggests that inflation will pick up in the second half of the year.

based bank said he expected year-on-year inflation to be nearer 2.5 per cent in July, as against 2 per cent in June.

In addition to the two-year and five-year issues, last Thursday also saw an extraor-

dinary repo issue, the result of the successful launch of the Balladur bond". Official results, released on Monday, confirmed that the bond had attracted about

FFr110bn, almost three times the target level. Thursday's issue of BTFs was designed to counteract the drain on the money markets as subscribers to the Balladur bond settled their accounts on

Friday. The extraordinary repo issue did not, however, fully compensate for the drain on the market. And combined with sale of about FFr60bn of BTFs earlier in the week, there was a strong tightening of liquidity.

The oversubscription of the Balladur bond - which yields 6 per cent and has a maturity of four years - will not neces ily reduce the French government's future capital raising

"They ought to overfund in this kind of environment," said one economist. "It might make sense to issue more bonds than they need now. It is likely to be more difficult later."

John Ridding

US MONEY AND CREDIT

Long-bond yield heads towards 6.5%

THE US credit market's dropped 0.3 per cent, its largest attention will be focused on Washington this week, where Mr Alan Greenspan, the chairman of the Federal Reserve, will give his semi-annual Humphrey-Hawkins report on monetary policy to Congress against the backdrop of a bond rally which has carried long rates to record lows.

On Friday, for the seventh successive trading session, the yield on the 30-year Treasury issue dropped to the lowest level since the Federal government began issuing these bonds on a regular basis 16

The long bond ended the week with a yield of 6.54 per cent, down from 6.64 per cent a week earlier after a raft of statistics showing that fears of inflation in the early summer were greatly exaggerated, and highlighting new signs of sluggish growth.

The biggest push to the market came from the producer and consumer price indices for June, released on Tuesday and Wednesday. The producer price index for finished goods he suggested in his last

monthly decline since January 1991, while the consumer index was unchanged from May, its best performance since March

But the rally was reinforced by figures on Friday showing that industrial production dipped two-tenths of a percentage point last month, its first decline since last September. and rumours that a closely watched gauge of consumer confidence was showing a drop

in early July. The economy is certainly growing slowly, but is the outlook so sluggish that the Fed will feel moved to eliminate the bias towards tightening which it put in place last May (and artfully leaked to the market) at the height of the infla-

Mr Greenspan, a master of the verbal stonewall, is unlikely to reveal this to Congress on Tuesday, though he is expected to cut his forecast of economic growth this year to around 2.5 per cent from the 3 per cent to 3.25 per cent rate

Humphrey-Hawkins testimony in February.

At the same time, the Fed's expectations of inflation seem likely to rise to around 3 per cent from the 2.5 per cent to 2.75 per cent rate foreseen in February, which most analysts always considered extremely Still, there seem few infla-

tionary clouds on the horizon. The severe flooding by the Mississippi river will give an upward blip to some agricultural prices, but the past week has also brought some significant signs of contrary trends. Procter & Gamble, the consumer products giant, announced big detergent price

cuts, while General Motors is

promising to raise its vehicle prices by an average of only 1.8

per cent in the model year that begins in the autumn. Most Wall Street analysts expect this background to keep Fed policy on hold for the immediate future, possibly the whole year, yet some wonder whether a touch of monetary easing could be in prospect before the summer is out.

Barney, suggests that if Congress can agree on a meaningful budget deficit reduction programme, and the economic growth and inflation numbers remain "well-behaved", then the Fed will implement a modest easing to avoid a more pervasive slowdown.

However, the Fed is unlikely to consider such action without the Senate and House of Representatives resolving their differences over a deficit package - and expectations of agreement on legislation are already largely factored into Any signs of serious difficul-

ties in Congress over the next few weeks could severely upset the market's upward momentum, which might also be tried by a heavy Treasury refinancing operation in the second week of August. But with those caveats, the odds look good for the long bond yield falling through the psychologically significant level of 6.5 per

Collared deals lead a resurgence of issuance

HARDLY a week goes by without the launch of several new floating rate note (FRM) issues, on the belief that short-term interest rates in the US have hit rock-bottom and are set for an upturn.

Last week was no exception as a batch of European banks (including Bayerische Landesbank, Dresdner Bank, Bayerische Vereinsbank, and Crédit Commercial de France) all launched collared floating rate deals and helped take the week's issuance to more than \$1bn.

Bayerische Landesbank and Dresdner Bank, both triple A-rated names, launched deals which were identical save for the amount

CCF, which has a senior debt rating of Aa3, launched an issue with

"If interest rates go up slowly, collared floaters will be in vogue, whereas if rates go up quickly, 'plain vanilla' FRNs will be in

vogue," said one analyst.
US houses report both retail and institutional investor interest in collared FRNs, although the interest in these structured products tends to come from Switzerland and continental European investors.

"Given that the outlook for dollar interest rates is neutral to positive, one would expect to see more of these collared deals: problems will only arise if interest rates rise to close to 8 per cent, when you won't expect to see much of a bid for the paper," warned one FRN specialist.

How money purchase schemes could be made more attractive

RISK AND REWARD

salary defined benefit scheme, the employer under-writes the investment risk. But in a money purchase scheme, where the value of the final benefit depends on how markets behave, the individual

bears the risk. However, if there were a technique to limit the risks the individual has to bear, might money pur-chase schemes appear more attractive? Most techniques on the market involve the gradual shift out of high-yielding but risky equities into lower risk, lower yielding fixed-interest investments as an individual approaches retirement.

But investment managers, sensing the commercial opportunities to be exploited, have been hard at work looking for ways to offer money purchase schemes with the rewards of equity investment combined with some guarantee of the final level of benefit to be delivered. S.G. Warburg says it has found a way to address the problem with a new product designed for group money purchase schemes with a minimum of £500,000 to invest. Warburg concedes that its guarantee is

incapable of ensuring that individuals will earn a benefit which bears any relationship to salary. After all, even if a lump sum could be guaranteed, individuals will remain dependent on the vagaries of the annuities market for the kind of benefit stream they can purchase with their lump sum. But what it will do, the firm says.

is to offer some guarantees against stock market collapse. The guarantee consists of a promise that individuals will earn at least 90 per cent of the average daily market value of the units in the pool in each year they participate. When they retire, they surrender their units at the full value on that day. The guarantee means that if equity prices tumble one year, individuals do not have to surrender the gains they

made in prior years.

Consulting actuaries who help companies choose pension fund investment managers are studying the product closely. Mr Martin Kemp, associate partner with con-sulting actuaries Bacon and Woodrow, said it bears some similarity to

In a classic final a product launched by several insurance companies in the 1970s but abandoned. "We are looking at it to see if the guarantee offered is worth the price," Mr Kemp said. Mr Graham Dixon of S.G. War burg, who designed the product, said the reason it is now workable and affordable has to do with the advent of a sophisticated market in

over-the-counter derivatives. Individuals who select the guar antee fund purchase units in a pool. For every £100 invested, £99 goes into the pool while £1 will go into a special reserve fund. Warburg has left itself an "out" clause by retaining the ability both to raise the 0.9 per cent management fee charged on the pool and to increase the proportion of pension contribution which goes into the reserve.

What makes the product interesting is the way the reserve pool is invested. As pension contributions are made, managers need to calculate the liabilities - the benefits of those set to retire - for the next five years. Roughly 10 per cent of the reserve pool will be used to buy over-the-counter put options on the FTSE which are 10 per cent "out of the money". There is an element of risk because the guarantee the investor receives is against the broader market rather than against the top 100 stocks.

Mr Dixon concedes that the reserve fund could be vulnerable if the entire market fell precipitously but the top 100 stocks outperformed the broad market. However, in premarket research going back to 1919

this situation never arose.

Another 80 per cent will be invested in the equity pool itself, so the returns to the reserve will mimic the sums it is guaranteeing. A further 10 per cent will be used to purchase options to cover the "out of the money" portion of the initial put options.

Mr Dixon calculates that the cost to Warburg of providing the protection is roughly 3 per cent to 4 per cent of the total invested, although he is more vague about the cost to the individual.

The cost will reflect, to some extent, the amount of income effectively surrendered by agreeing to accept only 90 per cent of the average market value of equities in any

IS THIS YOUR OWN COPY

Or do you rely on seeing someone else's? Every day the FT reports on the topics that matter to people doing business every day, in and from Europe.

We cover the latest European, U.S. and international news, and analyse the implications from a European perspective. In fact you'll find far more than finance in the FT. No surprise then, that the Financial Times is read by over four times as many senior European businessmen and women as any other international newspaper.* Make sure you're one of them by getting your own copy of the newspaper

delivered daily to your office. ion Han, Financial Times (Furope) Godf (), Nobelungsuplay & (1000 Feathbot/Man) | Gentlary | Tel. + 4804 (5686), Th. 446193, Fas.

Dreams that circle the globe

Bob Allen, the chairman of AT&T, speaks to **Andrew Adonis**

s the scourge of communications monopolies, Bob Allen comes as a bit of a shock. The chairman of American Telephone and Telegraph, the US telecoms giant banging at Europe's door, is mild-mannered to the point of diffidence, disarmingly quick to admit past mistakes and present ignorance.

However, fresh from an interview with the European Commission's Jacques Delors "President Delors", he calls him - there was nothing coy about Mr Allen's presence in Brussels, and his subsequent trip to Berlin last week. Europe is an important place for us. We have a lot of investment here... If the protective barriers come down, the opportunities will be great."

Since taking the helm at AT&T in 1988, "going global" has been one of Mr Allen's chief ambitions. Whatever its impact on competition overseas, the strategy is transforming AT&T. Ten years ago, the company had only 60 employees outside the US; now it has 30,000. For Mr Allen, who spent the formative years of his career working his way up Indiana's Bell company, the challenge is as much personal as corporate.

The biggest barrier to European telecommunications competition looks set to fall by 1998, when basic voice telephony will be opened up in most EC states. But AT&T is not waiting five years to make its pitch. As an equipment supplier, it is already competing strongly in the liberalised equipment market. It has an application pending to become a public operator in the UK. And its ambitious "Worldsource" venture, which aims to provide an integrated global telecommunications platform for multinationals, is scouring Europe for suitable local partners for its launch on the continent next year.

The backdrop to AT&T's global ambitions is bitter competition in its long-disinsists Mr Allen: "We are not away? "You need to look at and support for improvement driven solely by competition in our home market to go elsewhere ... What causes us to look outside the US and to globalise our business is the figures for either. huge investments required, particularly in information

eaceful diplomatic settlement

those investments over a larger base, then there just isn't enough growth capacity in the US (to do so].

"The fundamental heart of our strategy resides in our global network." In Europe "we would tend towards the partner route", rather than towards taking equity stakes

Although in public Europe's leading operators criticise "unfair" US competition, there is no shortage of private enthusiasm to become one of AT&T's Worldsource partners, The fear is about direct competition allege that AT&T's capacity to shift costs between its divi-sions will allow it to pick off the most lucrative parts of their business one by one.

Mr Allen's response? "It is impossible to cross-subsidise one business to another when all of your markets are competitive - well, it's not impossible...but you may lose your life in doing so. The competitive discipline in all our businesses makes it impossible." He points to AT&T's 25 business units: "If you think any of them are willing to subsidise another business or part of it, then you don't know how motivated they are to be successful. I defy anybody to come in and get into our innermost books and find cross-subsidy."

Might AT&T agree to formal accounting separation between its divisions, on a similar basis to that proposed for BT by Oftel, the UK's telecommunications regulator? "We do that today, though we don't report it publicly in all quarters.'

Mr Allen has little time for his regulator back home, the Federal Communications Commission. "I find it hard to believe that, with four major competitors to AT&T in the US, we need much regulation." The FCC could, he says, "virtually fall away" if its staff "weren't so interested in protecting their own jobs".

Mr Allen is adamant that in Europe regulation is needed to break the market open. At what level of competition more than gross market share [gained by competitors]; you need to look at market segments" - but he will not offer

That Europe needs AT&T Mr Allen has no doubt. "As a general rule, the development of telecommunications [in

Europe is an important place for us'

Europe) is trailing the US...and therein lies one of the challenges for the unification of the European Community. Europe needs a telecommunications infrastructure that is uniform and mod-ern...and it probably will not have such while it has protected industries."

What of the strategic importance of national telecommunications networks? "It's essentially an arrogant approach for a government official to say: 'I know better how to manage telecoms system and to

PERSONAL FILE 1935 Born Missouri; educated

ating officer, AT&T. 1988 Chalrman and chief executive. AT&T.

protect its strategic value' than to let the marketplace dictate improvement in this strategic asset." He applies that to Vice-President Al Gore's dreams of a fibre-optic communications "super highway" across the US. "Not for a moment do I want them [the Clinton administration] to ... do anything other than stand of the network."

With its imminent purchase of a stake in McCaw, the US cellular company, speculation is rife as to AT&T's intentions to enter local telecommunications in the US, from which it was barred at the break-up of the Bell structure in 1984.

Mr Allen claims the notion is based on a "misconception" of the role of cellular communications. Rather, he cannot understand why US local operators the so-called "RBOCs" - are so anxious to compete in AT&T's long-distance market: "99 per cent of our access payments last year went to the RBOCs; per cent of their revenues, and in some cases all of their profits came from us...One

and get into the other 60 per cent of the market . . . stimulating competition [in their market] and see their margins and profits disappear. However, with new technology and the development of multi-media – the convergence of computing, telecoms and the entertainment industry - the enforced division of the US

wonders why they want to destroy such a good business

market between operators is looking anachronistic. Mr Allen, who barely uses the word "telephone" these days, is positioning AT&T as the linchpin of new alliances to bring new products to market. "It is our intent to make the net-

> all forms of media. "It is entirely conceivable we could offer 'data warehouses' for a variety of companies offering multi-media services." he says. "We would do the billing, servicing the account, for, say, MGN, Library of Congress, and so on. That's not necessarily our vision," he adds hastily: "we have our own debates merely be a distributor or whether we should own the content: we don't know anything about making movies, but we do know something about delivering them."

work adaptable and useable to

Multi-media, however, is tomorrow's world: in the shorter term, AT&T sees China as perhaps its biggest growth

prospect. Like all equipment suppliers and operators, Mr Allen is daunted by the Olym-pian scale of the Chinese market. Earlier this year AT&T signed a memorandum of understanding which it hopes will lead to orders and joint ventures. "There are sure going to be bumps on the road; but we are going to try and see

"One of the dreams here," he says of AT&T's Chinese exploits, "is that we have an opportunity to bring new levels of information-sharing that few other countries have. It's not something I talk about much," he adds, "because shareholders want returns, customers want to be served. but when you step away from the daily grind ... it does give you a sense of purpose with a

So AT&T is the west's Trojan horse in China. It remains to be seen whether Europe is as receptive to Mr Allen's offer-

higher ideal than returns."

he "spin doctors" responsible for selling President Bill Clinton's economic plan are distributing a strategy paper entitled. Hallelujah change is coming. Perplexed that the plan's approval ratings have plunged since its unveiling in February, they are urging officials to ignore the details and simply proclaim the good news that a coura-

geous president is at last tak-

Part Charles Control of the

entitlement programme. On the revenue side, Mr Clinton is dangerously reliant on tax increases on the 1 per cent or so of families with incomes of \$200,000 or more. If the energy tax disappears, up to three-quarters of the increase in federal revenue may be sought from the wealthy. The plan is to raise taxes on the rich by about a fifth over five years while holding increases on other income classes to 2 per cent or less. This is seen as a just retribution for the greedy 1980s when the rich gained at the expense of the rest of society.

In fact, deep cuts in top marginal tax rates under President Ronald Reagan were associated with a sharp increase in the share of federal taxes paid by the rich. Since the increase in the top rate from 28 per cent to 31 per cent in 1990, tax receipts from the wealthy have fallen in absolute terms. Like it or not, the rich will always enjoy considerable discretion over how hard they work and, more important, how much of their income they declare for tax

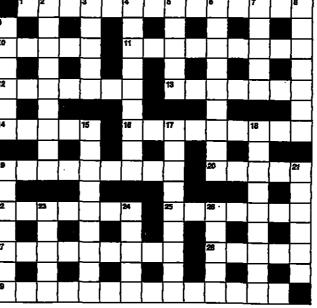

There can be no certainty that jacking up marginal tax rates from 31 per cent to 40 per cent or more will raise large cally-sophisticated group. In this respect, the Clinton plan is even less plausible than previ-ous Republican attempts to reduce the deficit. If the economy strengthens markedly in the next two years, the deficit could fall faster than expected for cyclical reasons. But it would be a temporary reprieve as nothing has yet been done to correct the adverse longerterm trends. The hallelujahs

because it will simply not be kept by the other side. This is exactly the kind of bargain which the Serbs seem to be trying to drive: a carve-up which would not just be unfair to the Moslems, but would give them a mini-territory which was vulnerable, cut off and

unviable. Together these moral and strategic flaws produce an this war will at least be a setinflammable mixture. It will be made more explosive by the mass of homeless refugees. taken. The Serbs may be win-About 3.8m people have been displaced by the war. The US State Department calculates that a complete ethnic carve-up of Bosnia would require the resettlement of 1.5m-2m people. Evidence from the partition of India and Pakistan in 1947, suggests that such vast transfers of populadesigned to exclude any tion cannot take place without

massive violence. In any event, many hundreds the name of an atavistic of thousands will remain national crusade, the slaughter homeless refugees. Many will inflicted on so many tens of simply submit. But some of thousands, cannot fail to prothose whose fate is destitution voke bloody acts of revenge for will seek revenge. That means

terrorism. in the Middle East, the

cannot solve. This is because they will not make peace with the Palestinians inside Israel: nor will they make peace with the Palestinians outside Israel. Since the Palestinians refuse to disappear, there is a continuous low-level conflict. It is hard to believe that the Serbs are deliberately setting out to imi-tate the Israelis, but that is the way it looks.

Some people will shrug their shoulders. We tried to mediate, they will say; we offered a peace process, but we failed. If they want to go on killing each other, it's their funeral. It's not our problem.*

But it is our problem, for at least three reasons: refugees, international recognition and the role of the United Nations. European Community policy is to keep out asylum-se

by sending them back to the first "safe" country they pass through. Since all the Community's neighbours are now designated "safe" countries, this means that the Community expects Switzerland, Austria. the Czech Republic, Poland and others to deal with Europe's refugee problem. The idea that the Community can shuffle off Europe's vast and growing refugee problem onto smaller and weaker countries is politically unsustainable.

In any case, such a policy will not work. If a significant proportion of the 3.8m dis-placed persons from the former Yugoslavia tries to get into the Community, many will certainly succeed, logally or illegally, because the pressures will be irresistible. The war in the former Yugoslavia inevitably has consequences for us. drive too hard a bargain, selves with a problem they We recoiled from the costs of

intervening, so we shall have to bear the costs of not intervening. But suppose the Serbs do cut

a deal with the Croats and the Moslems, what then? We shall have to decide whether to recognise their "settlement". If we do, we may have to insist on policing it, to minimise its injustices and the risks of further war. If we don't, presumably we have to continue sanctions against Serbia. But to what end, and on what conditions?

The dilemma is unavoidable. If we were unable to influence the war when it was going on, can we really pretend to influence the results when it is over?

And yet, how can we possibly endorse the Serbs' war of conquest? How can we even allow them to remain in the UN, when they have flagrantly offended, both against the organisation and against its basic principles?. And so to the UN. Experts

debate whether the international community really can claim a new "right of interference", overriding national sovereignty in the name of higher values.

The political facts, as seen in Bosnia and Somalia, are three-fold: no nation state, from Italy to the US, is prepared to submit to UN authority; every interventionist has a different policy; and none of them has an interventionist policy worth tuppence. The rest is just legalistic scratching.
